The Company

MÄDLER® GmbH
Head office Stuttgart

MÄDLER® GmbH
Düsseldorf branch

MÄDLER® GmbH
Hamburg branch

MÄDLER® Norm-Antrieb AG
Swiss Subsidiary

On November 9th, 1882 the foundations were laid. Bruno Mädler went self employed. He was dealing with fittings and hardware for the building industry, rivets, screws, bolts and nuts.

But business went booming fast. In 1905 the company proudly moved into their first own company building. The numbers of customers, products and employees were quickly rising. Thus in the 30ies the company had about 300 employees and was one of the leading tool building and mechanical engineering companies in Germany.

The end of world war II in 1945 brought along drastic changes, also for Bruno Mädler. Two months before the end of the war: air raid on Berlin. Hardly one stone remained on the other. The **MÄDLER®** company building in Köpenicker Street was completely destroyed.

When the rebuilding began, nobody new about the separation of Berlin that would later take place. Bad luck, that a site in East Berlin was chosen to dare a new start. The trade company was thus later managed as a trust and in 1972 the company was officially converted into public property.

The branch in West Berlin, which had been started at the same time, took a different development. After the war it became the new basis for company development. But: the strong competition of the free-market economy made the company change its approach. The main goal was now to find new, promising market niches.

And in fact, a sector that was perfectly suited could be found: gear elements, gear units, geared motors, machine building elements, standard parts and threaded spindles with accessories offered good future perspectives.

And the further development showed how correct this estimation had been. 1959 the branch in Stuttgart was founded, followed by Dusseldorf in 1963.

An even bigger step followed in 1968: Due to supply shortages and the high demands we have always had on quality we started to be interested in building up our own production

and in 1968 we got the chance to join up with a company.

This cooperation went so well, that in 1984 our first own production site, the toothing and gearing technology company Verzahnungstechnik Mädler GmbH, was founded. At the same time a number of other things happened:

- 1970: the company headquarters are moved from Berlin to Stuttgart.
- 1975: the subsidiary in Hamburg is founded.
- 1977: the business premises in Berlin are being closed.
- 1978: the Transnord GmbH in Hamburg is founded, with participation of the **MÄDLER®** GmbH.
- 1978: **MÄDLER®** also starts trading in the neighbouring countries. The company **MÄDLER®** Norm-Antrieb AG in Feuerthalen/ Switzerland starts making business.
- 1988 the headquarters in Stuttgart move into their new, own premises. 1990 the subsidiary in Dusseldorf moves - for the same reason.
- 2004 the area in Stuttgart is extended by about 3000 sqm.
- 2007 the Madler-Silvertech Power Transmission Components LTD. was founded in Shenzhen. This is the third factory of **MÄDLER®**.
- 2010: the subsidiary in Hamburg moves together with the factory Transnord into new buildings in Stapelfeld near Hamburg.
- 2012 the area in Stuttgart is extended by about 5400 sqm.
- 2015 in Stuttgart, the central stock is extended by a new hall. The factory in Stuttgart moves into a new, bigger building.

The Product Development

What once started with a few hundred parts, progressed rapidly. All company areas - whether trade or production schedule, driving, gearing or long-thread technology - have developed a variety that nobody would have expected.

A result to be proud of, and which the about 130 **MÄDLER**® employees gain from their 25.000 active customers. Then again, there is still a lot of potential left.

From more than 23,000 parts in the catalog product range, about 5,000 articles are produced by the own manufacturing companies to ensure the high quality level.

The Standard Programme

The **MÄDLER**® standard range is mainly oriented on the general demand from our international business partners and is continuously extended with standard parts as well as technical innovations.

To some extent the standard range is complemented with our own **MÄDLER**® products as, e.g., trapezoidal thread spindles with nuts, splined hubs with clamp collars, sprockets and so on.

Especially in the spare parts range an immediate supply - ex stock - is an absolute necessity which can reduce costs induced by machine downtimes. In this field **MÄDLER**® offers a wide range of standard parts and a wide-spread, reliable distribution network offering you fast solutions for your problems. You can take us at our word...

MÄDLER® meets even the highest quality requirements: Top quality, precision and reliability.

Custom-Made Products

The modern production machinery and our team of specialized, skilled workers serve as basis for another main part of our production: custom-made products according to drawings or your specifications, from one-off production up to large series, at a good price and with short delivery times – with perfect quality control, and flexible, as today's market demands.

Gears from module 0.3 to module 8, Gear racks from module 0.3 to module 16, bevel gears from module 0.5 to module 8, worm gears and worms from module 0.3 to module 6, trapezoidal thread from 10 x 3 mm to 70 x 10 mm single and double thread, including all matching trapezoidal thread nuts. Splined hubs and clamp collars for splined hub profiles 11 x 14 to 46 x 54.

Our Own Production

The **MÄDLER**® group produces its parts at two manufacturing sites in Germany, in Stuttgart and Hamburg. There specialised workers produce our own **MÄDLER**®-product range on the most modern CNC machinery.

One-off production according to drawings or samples up to larger series. with a perfect quality control, flexible, as today's market demands.

The most important prerequisite is a highly qualified and also cost-effective production and a guarantee for shortest delivery times for all parts listed in the yellow **MÄDLER**® catalogues and the internet.

Another factory is in China. This joint-venture enables simpler mass parts due to german quality standards at low prices.

General Description

When used properly, high quality roller chains are powerful and reliable drive systems. They can serve to bridge large centre distances. Various transmission ratios can be realized, independently of the centre distance. In Europe mainly roller chains according to DIN ISO 606 (ex DIN 8187) are used.

Selection, Dimensioning and Efficiency

The the performance diagram and the calculation given on page 36 can serve to determine a chain drive with a prospective service life of hours. With proper lubrication the degree of efficiency is approx. 98 %.

Note Regarding the Breaking Load

The DIN ISO 606 (ex DIN 8187) specifies the minimum breaking load for each chain size. When this breaking load is exceeded, the chain is destroyed. Roller chains should be loaded with no more than one sixth of the stated breaking load, to avoid an early plastic deformation (permanent elongation).

Mounting and Maintenance

The shafts must be set in parallel. The sprockets must be aligned. The slack span should amount to approx 1% to max 2% of the centre distance. For this purpose we recommend mounting a chain tensioner.

Large centre distances require a support (guide rail) to be used. Chain drives must always be well lubricated. Lubricants and lubrication methods depend on the specific application.

Determining the Chain Length

The chain length can be stated in meter or mm, or by stating the number of links. In the latter case, inner **and** outer links are counted. The chains are usually delivered open. The last link on both ends is an inner link.

This leads to an uneven number of links.

If a straight connecting link is used, the closed chain strand has an even number of links. Example of an open chain (without connecting link) with 5 links:

An uneven number of links in a closed strand can only be realized by using a cranked link.

Note: this link reduces the load bearing capacity of the chain by 20%.

Roller Chains in Catalogue Version

Single-Strand (Simplex-) Roller Chains:

Either as standard version made from special, high-quality steel, or lubrication-free, with additional nickel plating, or in stainless steel.

page 37

Double-Strand (Duplex-) Roller Chains:

As standard version made from special, high-quality steel. The transmission power is 1.75 times higher than single-strand.

page 43

Single-Strand Chains with Attachments:

In stock as chain with straight and bent attachments, one-sided or two-sided attached to the outer link, as one-whole or two-hole version, with a distance of 2 x p, 4 x p and 6 x p. Other distances available at short notice on request.

page 46

Triple-Strand (Triplex-) Roller Chains:

As standard version made from special, high-quality steel. The transmission power of this chain is 2.5 times higher than single-strand.

page 45

Sprockets in Catalogue Version

Sprockets for roller chains DIN ISO 606 (ex DIN 8187), with main dimension according to DIN 8192 (tooth profile DIN 8196) as well as various tensioning elements are available in large variety straight from stock. Other sprockets and custom-made products on request.

Overview sprockets: page 60.

Mounting options: page 817.

Dimensioning of Roller-Chain Drives DIN ISO 606 (ex DIN 8187)

Notes Regarding the Calculation

The dimensioning of a roller-chain drive can be worked out using the performance diagram below.
 This diagram shows the calculated transmittable power for a service life of 15,000 hours.
 The calculated performance is worked out by multiplying the power to be transmitted with the corrective factors stated below.
 The performance diagram is non binding. It is based on empirical values and set at optimum conditions. Special operational conditions can shorten the service life of the chain.

Calculation of the Transmittable Power P_B

$$P_B = P_N \times K_1 \times K_2 \times K_3 \times K_4$$

P_B : Calculated Transmittable Power [kW]

P_N : Input Power [kW]

K_1 : Factor Considering the Number of Teeth (Table 1)

K_2 : Factor Considering the Transmission (Table 2)

K_3 : Factor Considering the Centre Distance (Table 3)

K_4 : Factor Considering the Type of Load (Table 4)

Table 1: Corrective Factor K_1 Considering the Number of Teeth of the Smaller Sprocket

Number of Teeth	11	13	15	17	19	21	23	25	31	37
Factor K_1	2.5	2.0	1.75	1.55	1.35	1.2	1.1	1.0	0.78	0.64

Table 2: Corrective Factor K_2 Considering the Transmission Ratio

Transmission Ratio 1 : 1	2 : 1	3 : 1	5 : 1	
Factor K_2	1.22	1.08	1	0.92

Table 3: Corrective Factor K_3 Considering the center distance

Center Distance	10 x p	20 x p	40 x p	80 x p
Factor K_3	1,3	1,15	1	0,85

Table 4: Corrective Factor K_4 Considering the Type of Load (Operating Factor)

Input	Output (Type of Load of Driven Machine)		
	Uniform	Medium Shocks	Strong Shocks
Uniform	1.0	1.4	1.8
Light Shocks	1.1	1.5	1.9
Medium Shocks	1.3	1.7	2.1

Performance Diagram: Calculated Transmittable Power P_B

Single-Strand Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Special chain steel.

High-quality simplex roller chains, pre-stretched according to DIN.

Notes regarding the performance calculation on page 36.

Waisted link plates (size 06 with straight link plates).

Chains are supplied with an uneven number of links, with inner links at both ends. Connecting links must be ordered separately.

Temperature range: -20°C to +120°C.

Other temperatures are possible if special grease is used.

Ordering Details: e.g.: Product No. 100 000 00, Bush Chain, Single Strand, Pitch 4mm

* Delivery in packing units of 5 pieces.

¹⁾ Pitch 4 mm for chain 100 000 00.

²⁾ Pitch 12.7 mm for chain 103 400 00.

³⁾ With cranked links power and breaking load are reduced by 20%.

Single-Strand Roller Chains, similar to DIN ISO 606 (ex DIN 8187), with straight plates

Material: Special chain steel.

High-quality simplex roller chains, pre-stretched according to DIN.
Notes regarding the performance calculation on page 36.
With straight link plates, to use as conveyor chain or drive chain.
Chains are supplied with an uneven number of links, with inner links at both ends. Connecting links must be ordered separately.

Temperature range: -20°C to +120°C.
Other temperatures are possible if special grease is used.

Ordering Details: e.g.: Product No. 105 000 00GL, Roller Chain 08 B-1-GL, with straight plates

Chains KE and KE-Eco, similar to DIN ISO 606 (ex DIN 8187), Plastic with Stainless Steel

Material and type:

Type KE: Inner links made from special polycarbonate with high chemical resistance, for food industry or laboratory. Outer links from stainless steel 1.4301.

Type KE-Eco: Similar to KE, but inner links from standard polycarbonate, with lower chemical resistance.

Main dimensions according to DIN ISO 606 (ex DIN 8187).

- Very light and silent running.
- Very clean due to closed surfaces on the inner link.
- High corrosion resistance.
- Long lifetime, without any lubrication.
- Breaking load significantly higher than pure plastic chains.
- Temperature range -10°C to +80°C. V_{max} 70m/min.

Chains are supplied with an uneven number of links, ending with inner links. Connecting links must be ordered separately.

Ordering Details: e.g.: Product No. 101 550 00, Chain KE 06 B-1

Connecting links for chains KE and KE-Eco

Material: Stainless steel 1.4301.

Ordering Details: e.g.: Product No. 101 990 03, Connecting Link No.11/E, 06 B-1, stainless

No. 11/E: Connecting link with spring clip

DIN ISO No.	Product No. Connecting Link No. 11/E	Weight g
06 B-1	101 990 03	4
08 B-1	105 990 03	7
10 B-1	106 990 03	13
12 B-1	107 990 03	14

Load calculation factors for Chains KE and KE-Eco

The actual load is to be calculated with the following factors. The result may not be greater than the allowed calculated load.

- Shock load:** Usual factors see page 36
- Number of sprocket teeth:**
 - 9 - 14 teeth: Factor 1.16
 - 15 - 23 teeth: Factor 1.12
 - 24 - 37 teeth: Factor 1.08
 - 38 - 59 teeth: Factor 1.04
 - Above 60 teeth: Factor 1.00
- Chain speed:**
 - 0 to 15m/min: Factor 1.0
 - 16 to 30m/min: Factor 1.2
 - 31 to 50m/min: Factor 1.4
 - 51 to 70m/min: Factor 1.6

Resistance of KE-Chains

Resistant against:

Acetone, alcohol, ammonia water, malic acid (50%), petrol, benzene, butyric acid, acetic acid, formaldehyde, glycerine, caustic potash, potassium nitrate, lactic acid (10%), sodium chloride, sodium bicarbonate, oils (plant / mineral), paraffin, petroleum, juices, hydrogen sulphide (dry), tartaric acid (10%), sugar solutions etc.

Tested at 20°C, without any guarantee about secondary effects.

Not resistant against:

Chlorine gas, chromic acid, iodine, phosphoric acid, carbolic acid, nitric acid, hydrochloric acid, ozone, sulphuric acid, hydrogen sulphide (wet), stearic acid etc.

Single-Strand Roller Chains Similar to DIN ISO 606 (ex DIN 8187), Stainless Steel

Material: Stainless steel 1.4301.

Simplex roller chains with good chemical resistance. Main dimensions according to DIN ISO 606 (ex DIN 8187). Due to the material properties, the stated transmittable power and breaking load are below the value for the standard chains. The application should use no more than one sixth of the braking load stated. Not pre-stretched, not lubricated. The chains must be lubricated according to the type of application. Waisted link plates (size 06 with straight link plates). Chains are supplied with an uneven number of links, with inner links at both ends. Connecting links have to be ordered separately.

¹⁾ With cranked links, power and breaking load are reduced by 20%.

²⁾ Only with riveted bolts.

Double-Strand Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Special chain steels.

High-quality duplex roller chains, pre-stretched according to DIN.

Notes regarding the performance calculation on page 36.

Waisted link plates (size 06 with straight link plates).

Chains are supplied with an uneven number of links, with inner links at both ends. Connecting links must be ordered separately.

Temperature range: -20°C to +120°C.

Other temperatures are possible if special grease is used.

Ordering Details: e.g.: Product No. 120 000 00,
Double-Strand Roller Chain, 05 B-2

Double-Strand Roller Chains Similar to DIN ISO 606 (ex DIN 8187), with Straight Plates

Material: Special chain steels.

High-quality duplex roller chains, pre-stretched according to DIN.

Notes regarding the performance calculation on page 36.

With straight link plates, to use as conveyor chain or drive chain.

Chains are supplied with an uneven number of links, with inner links at both ends. Connecting links must be ordered separately.

Temperature range: -20°C to +120°C.

Other temperatures are possible if special grease is used.

Roller Chains - Customized Products to Your Requirements

Cutting the Chain:

- Special chain breaking machine with quick tool change for several chain sizes.
- For cutting chains to any fixed length required by the customer.
- From one-off pieces to large series at very short notice.

Riveting the Chain:

- Special chain-riveting machine with quick tool change for several chain sizes.
- Riveting fixed-length chains into endless riveted chains.
- Riveting of attachments to create customized chains matching your special requirements, e.g. with different distances of the attachments.
- From one-off pieces to large series at very short notice.

Chain Configurator on the Internet:

- At www.maedler.de in the section **MÄDLER®-Tools**.
- Fast selection of attachments according to DIN ISO 606 (ex DIN 8187-2).
- Selection of chain lengths and attachment distances.
- Printout with detailed description, also stating the price.

Protocol Help

Chain configurator

Basic type - roller chains according to DIN 8187

DIN / ISO Chain No.: 08B-1 - standard steel - single 1/2" x 5/16" Reset Help

Overall chain length: 88.0 (Number of links) Number of chains: 1

Attachment type: Narrow straight attachments with 1 mounting hole Lateral arrangement: single-sided

Attachment distance: Slip = every 4th outer link 101.6 mm

As-delivered state: Endless riveted

Result

DIN / ISO Chain No.: 08B-1 - standard steel - single

Breaking load per chain [N] approx.: 18000.0

Number of chain links per chain: 88

Chain length [mm]: 1117.6

Number of attachment links: 11

Number of chains: 1

Net price (per unit) [EUR]: 23.91

All prices are exclusive of value added tax.

The delivery time is 2 to 3 working days.

Notes / Special requests: Endless riveted

Protocol E-mail enquiry

Other Special Chains (on request):

- With extended pins in various arrangements, with or without keyway.
- Other attachment shapes (e.g. serrated for use with cardboard packaging material or with extra large carriers to transport round material).
- Roller chains with long links.
- Roller chains of other standards (e.g. Ansi / DIN 8188).

Plastic Guide Rails for Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Low pressure polyethylene PE-UHMW.

These side-rails serve to support fast-running roller chains which are lined up exactly; other than steel or metal side-rails they dampen the noise and reduce strong wear.

Special features: wear-resistant, self-lubricating, resistant against diluted acids and diluted alkalines, impact resistant, corrosion resistant, soil resistant and cost efficient.

Stock lengths 1 meter and 2 meter.

Temperature range: -200°C to +60°C (for short time up to +80°C).

Fixed length and other types on request.

140 722 00	16 B to max. 65 mm	960

*can also be used for similar sizes of other standards and for double-strand and triple-strand chains.

Product No. 140 721 00 with knob.

Product No. 140 722 00 with turn lever.

Chain Lubrication Spray

Ordering Details:
Product No. 140 701 00, Chain Lubrication Spray

Product No.	Contents ml	Weight g
140 701 00	400	465

- special adhesive lubricant for the maintenance of heavy duty and fast running drives or timing chains, plain bearings, open gear units, etc.
- temperature resistant from -10° to +140°C.
- strong adhesive power.
- highly capable of creep.
- drives out water.
- dampens noise.
- protects from wear.
- protects from corrosion.
- silicone-free.

Sprockets KRK Made from Acetal Resin with One-Sided Hub, Die Cast

Bores ISO H8.

Material specifications see page 821.

Metal inlays at the hub with custom bore, feather keyways or threads for set screw available on request, depending on the amount and size ordered.

Note regarding pulleys made from acetal resin

Inside these injection-moulded parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

Sprockets KRF, Teeth Hardened, Pitch 1/2 x 5/16", ISO 08 B-1

Material: Steel C45.

Ready-to-install, for various shaft diameters.

Teeth milled and induction hardened (HRC 50), custom bore H7 - surface parameter R_a 1.6, keyway in accordance with DIN 6885/1 positioned beneath tip of tooth, 2 threads for set screws, one positioned for the keyway, one offset by 90°.

Sprockets KRF, Teeth Hardened, Pitch 5/8 x 3/8", ISO 10 B-1

Material: Steel C45.

Ready-to-install, for various shaft diameters.

Teeth milled and induction hardened (HRC 50), custom bore H7 - surface parameter R_a 1.6, keyway in accordance with DIN 6885/1 positioned beneath tip of tooth, 2 threads for set screws, one positioned for the keyway, one offset by 90°.

Sprockets KRF, Teeth Hardened, Pitch 1" x 17.02 mm, ISO 16 B-1

Material: Steel C45.

Ready-to-install, for various shaft diameters.

Teeth milled and induction hardened (HRC 50), custom bore H7 - surface parameter R_a 1.6, keyway in accordance with DIN 6885/1 positioned beneath tip of tooth, 2 threads for set screws, one positioned for the keyway, one offset by 90°.

Sprockets KRT with One-Sided Hub for Taper Bushes

Material: Steel C45, not hardened.

Sprockets marked with * are made from grey cast iron GG22 with the teeth centred on the wheel body, see drawing.

Pitch 3/8 x 7/32", Z = 57, H = 9.3 mm

Pitch 1/2 x 5/16", Z = 57, H = 12 mm

Ordering Details: e.g.: Product No. 101 771 17, KRT, Pitch 3/8 x 7/32", 17 Teeth, Dimension bore with Reference to Taper Bush Type, see page 76.

Pitch 3/8 x 7/32" KRT, ISO 06 B-1, B₁ = 5.3 mm, c = 1,0 mm, r₃ = 10 mm

Sprockets KRT with One-Sided Hub for Taper Bushes

Material: Steel C45, not hardened.
Sprockets marked with * are made from grey cast iron GG22 with the teeth centred on the wheel body, see drawing. $Z = 57$, $H = 21$ mm.

Ordering Details: e.g.: Product No. 108 771 13, KRT, Pitch 1" x 17.02 mm, 13 Teeth, Determine bore size with reference to Taper bush type, see page 76.

**Pitch 1" x 17.02 mm, KRT, ISO 16 B-1,
 $B_1 = 16.2$ mm, $c = 2.5$ mm, $r_3 = 26$ mm**

**Description and
mounting instructions
page 824**

Sprockets marked with * are made from grey cast iron GG22.

Taper bushes page 76

Taper Bushes

Material: GG20.

Bores ISO E8, feather keyways in accordance with DIN 6885/1.
Screws included in delivery.

Shaft tolerance +0.05/-0.125 mm.

Can be used with or without parallel key, depending on the required torque.

Other bush sizes and bores available at short notice (some in stock).

Assembly instructions see page 824.

Spare screws for Taper Bushes

Material: Steel.

Supply: One screw (order quantity as needed).

Taper bushes have two or (from size 3030) three screws depending on size.

Ordering Details: e.g.: Product No. 622 501 99, Spare Screw , Taper Bush 1008 and 1108

Product No.	to match Taper bush	Size inch	Screw type	Tightening Torque Nm	Weight g
622 501 99	1008 and 1108	1/4"	Set screw with internal hexagon	5.6	1.9
622 503 99	1210 to 1615	3/8"	Set screw with internal hexagon	20	5.2
622 505 99	2012 and 2017	7/16"	Set screw with internal hexagon	30	11
622 506 99	2517 and 2525	1/2"	Set screw with internal hexagon	50	16.4
622 507 99	3020 and 3030	5/8"	Set screw with internal hexagon	90	33.2
622 510 99	3525 and 3535	1/2"	Screw with internal hexagon	90	49.7

Welding Hubs for Taper Bushes

Material: Steel (St52 or comparable), good weldable.

Hub for fixing a chain plate wheel or similar parts with a low priced taper bush onto a shaft.
Taper bush and chain plate wheel have to be ordered separately.
Recommended bore tolerance: H8.

Before welding, a taper bush should be mounted with a piece of shaft into the welding hub to avoid deforming by heat.

Other sizes for taper bushes up to type 5050 are available at short delivery time.

Ordering Details: e.g.: Product No. 140 901 01, Welding Hub for Taper Bush 1210

Sprockets with One-Sided Hub, ISO 06 B-1

Material: Steel C45, optionally hardened.
Pre-bored.
Sprockets marked with * are made from grey cast iron GG22.
Type KRS: Not hardened. **Type KRG:** Teeth induction hardened.

Ordering Details: e.g.: Product No. 101 108 00, KRS, 3/8 x 7/32", 8 Teeth

Pitch 3/8 x 7/32" KRS and KRG
B₁ = 5.3 mm, c = 1.0 mm, r₃ = 10 mm

Sprockets with One-Sided Hub, ISO 08 B-1

Plate wheels KRL, ISO 08 B-1

Material: Steel C45, optionally hardened.
Pre-bored.
Sprockets marked with * are made from grey cast iron GG22.
Type KRS: Not hardened. **Type KRG:** Teeth induction hardened.

Ordering Details: e.g.: Product No. 105 108 00, KRS, 1/2 x 5/16", 8 Teeth

Material: Low-carbon steel, not hardable.
Pre-bored.

Type KRL: Without hub, not hardened.

Ordering Details: e.g.: Product No. 105 208 00, KRL, 1/2 x 5/16", 8 Teeth

Pitch 1/2 x 5/16" KRS and KRG
B₁ = 7.2 mm, c = 1.3 mm, r₃ = 13 mm

Pitch 1/2 x 5/16" KRL

Mounting Options for Drive Wheels

There are several possibilities for mounting driving wheels (sprockets, V-Belt Pulleys, pulleys, spur gears etc.) or hubs on shafts. Most wheels are stocked with a rather small bore to allow for further machining. Machining works as drilling out, keywaying a.s.o. can be done at extra charge.

Please note: for several shaft diameters a number of sprockets, V-belt pulleys, spur gears and worm-gear sets are in stock "ready-to-install", i.e. with custom bore and keyway or prepared for Taper clamping bushes.

Fixing Pins

A hole is drilled through hub and shaft and both parts are then connected with a fixing pin. Usually only one side of the hub is pre-drilled, then the wheel is pushed onto the shaft and the hole is drilled through both shaft and the other side of the hub. Then the pin is driven in. This mounting method is suitable for low torques.

Feather Key Connection

Shaft and hub both receive a keyway, a key is pushed into the keyway of the hub. The wheel is pushed onto the shaft and secured against axial movement (with a set screw or with a stepped shaft and axial screw and washer at the end of the shaft). The most common kind of keyway is DIN 6885/1. Key connections are suitable for medium torques. Keys DIN 6885 see page 578 and 579. Boxes with an assortment of keys DIN 6885 see page 577.

Clamping Sets, Clamping Bushes and Shrink Disks

Clamping sets and thin-walled clamping bushes are available for various diameters. They allow fast and easy mounting on round shafts. A keyway is not required. Shrink disks are special clamping sets which press a thin-walled hub onto a shaft. Clamping connections are suitable for rather high torques.

Clamping sets and bushes, and shrink disks see page 330.

Taper Clamping Bushes

These customary conical bushes are used for easy and fast mounting of driving elements in Taper version. They can be used with and without key.

The bushes are available with various outer dimensions. For every outside measure there are bushes with many different bores available. This mounting method is cost-efficient and fast, and suitable for rather high torques. A large selection of cost-efficient driving elements in Taper version are available ex stock.

Taper clamping bushes see page 360.

Welding hubs for taper bushes see page 362.

Taper sprockets see page 74, 92, 101.

Taper V-belt pulleys see page 183.

Taper pulleys see page 154.

Taper couplings see page 388.

Chain Tensioning Wheels KSP with Bearing for Single-Strand Roller Chain DIN ISO 606 (ex DIN 8187)

Material: Sprocket steel C45, burnished.
Bearing made from roller bearing steel.

Ready-to-mount idlers, complete with bearing.

Cost-efficient. Can be mounted at the deflection or tensioning points. Perfect workmanship and stable mounting of the ball bearing with shields on both sides guarantee a high resistance against breakage and wear. Easy to mount by the extra long internal ring. Also suitable for agricultural and textile machines. Maintenance-free bearing, with grease filling.

Temperature range: -20° to +120°C.

Ordering Details: e.g.: Product No. 140 000 00 KSP, 05 - B1

Chain Tensioning Wheels KSP-R with Bearing for Single-Strand Roller Chain DIN ISO 606, Stainless Steel

Material: Sprocket stainless steel 1.4305.
Ball bearing stainless steel.

Ready-to-mount idlers, complete with bearing.

Cost-efficient. Can be mounted at the deflection or tensioning points. Perfect workmanship and stable mounting of the ball bearing with shields on both sides guarantee a high resistance against breakage and wear. Maintenance-free bearing, with grease filling.

Temperature range: -20° to +120°C.

Ordering Details: e.g.: Product No. 140 990 01, Chain Tensioning Wheel KSP-R, 06 B-1

Sprocket Sets for Chain Tensioners Single, Stainless Steel

Material: Sprocket stainless steel 1.4305.
Ball bearing, screw and nuts stainless steel.

The sprocket can be moved on the screw and thus be aligned with the chain. It is locked in the desired position with the nuts. The permanently lubricated 2-Z bearings are sealed on both sides and guarantee perfect running of the sprocket.

Temperature range: -20° to +120°C.

Chain Tensioners SPANN-BOX® Size 0, for Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Housing from thermoplast.
Chain rider from low pressure polyethylene PE-UHMW.
Screws and spring from stainless steel.

These small, ready-to install tensioners enable noise reduction and wear reduction at chain drives.

- With spiral, linear spring. On choice two tensioning forces.
- With colored wear-off indicator: Green: o.k. Yellow: still o.k. Red: Tensioning force too low (below 32N or 60N).
- Usable travel up to the end of the yellow range: About 32mm. Total travel about 40mm.
- Interchangeable with similar parts of other suppliers.

Temperature range: -20°C to +60°C (short time up to +80°C).

Ordering Details: e.g.: Product No. 140 401 01, Spann-Box Size 0, low Tensioning Force, 06 B-1

SPANN-BOX® Size 0 with low Tensioning Force

140 402 26	10 B-2	5/8 x 3/8"	132 - 60	135

Mounting of SPANN-BOX® Size 0

At front- and backside, there is a small hole for a locking pin (pin is included at the bottom of the housing). With this pin, the tensioner can be locked at maximum force for easy mounting. Recommendation: Mounting on slack side. The chain should be in contact with several links. To reach a sufficient contact angle, it may be useful to mount an idler wheel (e.g. KSP or KSP-R) near by the tensioner.

Operating Instructions at www.maedler.de in the section Downloads

Technical Note to Chain Tensioners SPANN-BOX® and SPANN-BOY®

Function: These tensioners are powered by linear spiral springs. These elastic tensioners reduce the chain slack and compensate the elongation of chains.

Temperature range: The standard versions are suitable for -20°C to +60°C (short time up to +80°C). Special versions are available on request for temperatures down to -40°C or up to +200°C.

Determination of tensioning force: The tensioners SPANN-BOX® size 0 can be ordered with two different tensioning forces. At SPANN-BOX® size 1 and SPANN-BOY® TS, the tensioning force can get adjusted at different amounts. The weight of the loose chain slack should not be greater than the half of the maximum tensioning force.

Mounting: The tensioner should be placed at the loose chain slack, near by the driving wheel. For low wear-off, several links should be in contact with the chain rider. To reach a sufficient contact angle, it may be useful to mount an idler wheel (e.g. KSP or KSP-R) near by the tensioner. For easy mounting, all tensioners can get locked at maximum tensioning force. After mounting, the tensioners must get unlocked.

Maintenance: At all tensioners, the colored wear-off indicator must be checked periodically. The time of period depends on the operating conditions of the chain drive. When the red marking can be seen, the tensioning force is too low. Then, after locking the tensioner at maximum spring force and loosening the mounting screws, the tensioner can get re-adjusted, closer to the chain. Slot holes allow a re-adjustment in a wide range. When the chain elongation exceeds 3%, the chain and chain wheels should be replaced. If the chain rider is worn, also the complete tensioner should be replaced.

Chain Tensioners SPANN-BOX® Size 1, for Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Housing from steel, zinc plated, black lackered.
Chain rider from low pressure polyethylene PE-UHMW.

Material Version Stainless: Housing from stainless steel.

These ready-to-install tensioners enable noise reduction and wear reduction at chain drives.

- With three springs. On choice: Two tensioning force versions. At both versions, three different forces can get activated.
- With colored wear-off indicator: Green: o.k. Yellow: still o.k. Red: Tensioning force too low.
- Usable travel up to the end of the yellow range: About 32mm. Total travel about 40mm.
- Interchangeable with similar parts of other suppliers.

Temperature range: -20°C to +60°C (short time up to +80°C).

Adjustable Tensioning Forces:

On choice, there are two versions, with low tensioning force or with high tensioning force. Both versions have three springs, which can get activated independent from each other to reach three different tensioning forces:

Version with low tensioning force:

- 1 spring activated: 58 - 32 N.
- 2 springs activated: 116 - 64 N.
- 3 springs activated: 174 - 96 N.

Version with high tensioning force:

- 1 spring activated: 132 - 60 N.
- 2 springs activated: 264 - 120 N.
- 3 springs activated: 396 - 180 N.

Chain Tensioners SPANN-BOY® TS, for Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Housing from steel, zinc plated, black lackered.
Chain rider from low pressure polyethylene PE-UHMW.

Material Version Stainless: Housing from stainless steel.

These very low, ready-to-install tensioners enable noise reduction and wear reduction at chain drives.

- Needed space below chain only 40mm.
- With two springs of different force, which can get activated separately or together. So it is possible to adjust three different tensioning forces.
- Usable travel about 40mm.
- Interchangeable with similar parts of other suppliers.

Temperature range: -20°C to +60°C (short time up to +80°C).

Ordering Details: e.g.: Product No. 140 408 01, Spann-Boy TS, 06 B-1

Adjustable Tensioning Forces:

The SPANN-BOY® TS has two different springs: one with low force and one with high force. These springs can get activated separately or together. So it is possible to adjust three different tensioning forces:

Only the low-force spring activated: 58 - 32 N.

Only the high-force spring activated: 132 - 60 N.

Both springs together activated: 190 - 96 N.

Chain Tensioners for Single-Strand Roller Chains DIN ISO 606 (ex DIN 8187)

Material: Housing sintered steel or grey cast iron GG20, lever St52, sprocket made from steel.

This tensioning element, a continually-tensioning torsion element, prolongs the service life of chain and belt drives by at least 30%, and radically reduces maintenance and repair work. The unique operating principle of this spring offers a long tensioning distance, especially as the lever can be pre-tensioned by up to 30° in both directions. The permanent torsion force does not only automatically compensate the chain elongation, the rubber mounted element also dampens vibrations and shocks in the entire drive. Other advantages: chain track adjustable, rubber suspension, adjustable at an angle of 360°, tensioning pressure steplessly adjustable from "normal" to "hard". Can be used for both tensioning directions. Temperature range: -20° to +80°C.

Sprocket Sets for Chain Tensioners Single

Material: Steel St40/50. Screw zinc-plated steel.

The sprocket can be moved on the screw and thus be aligned with the chain. It is locked in the desired position with the nuts. The permanently lubricated 2-Z bearings are sealed on both sides and guarantee perfect running of the sprocket.

Temperature range: -20° to +120°C.

Chain Rider Sets

Material: Plastic POM. Screw zinc-plated steel.

To be mounted on the suitable tensioning element to create a ready-to-mount, cost-efficient chain tensioner. The shape of the rider, made from high-grade, friction resistant, industrial plastic, means the rider can be used on both rider sides and the large radius guarantees quiet operation. The maximum chain speed must not exceed 1.5 m/sec. Temperature range: -20° to +80°C.

Tensioning Element has to be ordered separately.

Tensioning Elements in Standard Version

Material: Housing up to Ø 78 mm made from sintered steel, over Ø 78 mm made from grey cast iron GG20, lever made from St52.

Can be used for tensioning all common kinds of chain and belt drives. The elastomeric inserts are based on highly-elastic natural rubber with a good shape memory and are designed for applications in temperatures from -40° to +80°C

The tensioning elements are painted blue and supplied with a zinc-plated screw and spring washer. Can be used for both tensioning directions. Temperature range: -40° to +80°C.

Tensioning Elements, Zinc Plated and Oil Resistant

Material: Casing made from sintered steel or grey cast iron GG20, lever made from St52.

The design of these tensioning elements is identical to the standard version, but they are zinc plated and the synthetic spring elements are resistant to mineral oils. These components are especially suited for "outdoor" applications, e.g. for construction machinery or for use inside the oilbath of a gearbox. The tensioning elements are marked with a yellow dot on the lever. Can be used for both tensioning directions. Temperature range: -40° to +120°C.

Ordering Details: e.g.: Product No. 140 800 03, Tensioning Element Ø 35 mm

Tensioning Elements with Front Mounting

Material: Housing up to $\varnothing 78$ mm made from sintered steel, over $\varnothing 78$ mm made from grey cast iron GG20, lever made from St52.

These tensioning elements are in general identical to the standard version. For easier mounting they are fixed from the lever side using an in-and-out screw. A thread has to be cut in the machine housing. The supplied screw is secured for transport with an O-Ring. Can be used for both tensioning directions. Temperature range: -40° to $+80^{\circ}\text{C}$.

Ordering Details: e.g.: Product No. 140 801 07, Tensioning Element $\varnothing 45$ mm

Tensioning Elements „Boomerang“

Material: Housing sintered steel, lever St52.

These tensioning elements are used to compensate the slack in extremely long chain drives. The slack length passes in an S-shape through the supplied sprockets or pulleys so that the lever works as a compensator. This system thus offers a triple compensation of the slack compared to standard tensioners.

Application example:

Round-Link Steel Chains DIN 766 A, zinc-plated

Material: High-quality steel in accordance with DIN 17115, zinc plated

Short links, true to gauge, certified. Quality class 3.
High-quality steel in accordance with DIN 17115.
Surface, zinc plated

Stock lengths available, max 30 m.

Matching sprockets and chain rollers, see page 120.

Ordering Details: e.g.: Product No. 770 104 00, Round-Link Steel Chain 4 mm, DIN 766A.

Product No.	d mm	t mm	b mm	Work load* approx.N	Minimum breaking load N	Weight kg/m

* At chain speeds up to 1 m/s.

Spare Chain Links RN, zinc-plated

Material: Steel, zinc plated.

Chain links consisting of two parts that have to be riveted together. Precisely drop-forged and deburred, ready-to-use, matching chain DIN 766. One part is placed on top of the other, and then both parts are pressed together. These spare chain links cannot be used for continuous operation under load.

Matching sprockets and chain rollers, see page 120.

Ordering Details: e.g.: Product No. 770 135 00, Spare Chain Link RN 5 mm.

Idlers 712 AV Made from Special Cast Iron with One-Sided Flange

Flange and running surface precisely turned, running surface inclined at 3° towards the axle, wheel mounting optionally with plain or roller bearing. As standard the roller bearings are sealed with Z-plates (all dimensions and weights „ca.“).

Ordering Details: e.g.: Product No. 775 005 00, Idler 712 V as Plain Bearing, Wheel Ø 50 o.S.

Version with Plain Bearing (Dimensions in mm)

Idlers Made from Polyamide with One-Sided Flange

This Polyamide grade has a high abrasion resistance with low friction coefficient, is self lubricating and can thus, at low speeds, easily be used as plain bearing.

Ordering Details: e.g.: Product No. 775 405 00, Idler Polyamide, Wheel Ø 50

Runner Wheels Made from Polyamide (dimensions in mm)

775 412 00	120	150	42	30	45	80	38	380	0,585

Note Regarding Polyamide Wheels

Inside these die-cast parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

Idlers Made from Steel (C45) with Flange on Both Sides

Especially suited for heavy-duty applications, e.g. electrically controlled gates.
Precisely turned from solid material; with fully sealed precision bearings.

Product No. 776 004 00 and 776 005 00 with square running surface and single bearing, wheel body burnished.

Product No. 776 006 00 to 776 016 00 with convex running surface and double bearing.

Delivery includes all mounting material needed; axle bolt at running surface \varnothing 35 and 45 mm with external thread, serrated washer and hexagon nuts, other sizes with internal thread, 6 hexagon screws and washers DIN 9021.

Travel-Wheel Systems RB/I

Material: Housing made from spheroidal graphite cast iron, painted gray. Travel wheel made from GG 70, with high-quality roller bearing.

Version G: With cast iron travel wheel with two flanges, with high load capacity, to be used on rails.

Version K: With cast iron travel wheel with PUR-bandage (Polyurethane-Elastomer), for higher traction at low operating noise.

A very robust, universal, maintenance-free travel wheel system available in two sizes. It is designed for various travel applications with wheel loads up to 3.5 t and travel speeds up to 240 m/min (depending on version and load). The five connection surfaces are machined and provide for a multitude of connection variants. 4 screws for inverted mounting are supplied. The housing is painted gray (RAL 7001) and can be repainted.

The travel-wheel systems can be combined with the geared motors RBM/I to form a compact drive unit.

Temperature range: -20°C to +60°C.

Ordering Details: e.g.: Product No., Type, Size, Version

Product No.	Size	Version	Load Bearing Capacity		Weight kg	Matching Accessories		
			up to 100 m/min kg	R* at Speed 240 m/min kg		Product No. Buffer Set	Product No. Pin Connection	Product No. Roller Guide

Travel wheel system with buffer set.

Travel wheel system, Inverted Mounting (screws supplied).

Mounting with bolt set, for horizontal guide-roller arrangement.

Powered travel wheel block with geared motor RBM/I.

Accessories for Travel-Wheel Systems RB/I

Buffer Set

Material: Polyurethane cellular foam, spacers made from plastic, black.

Consisting of: one buffer, threaded pin M12 x 55 mm, two spacers 12.5 mm (for mounting without guide roller) and one spacer 25 mm (for mounting with guide roller, using the supplied nuts M12).

The required thread has already been machined on both face ends of the travel-wheel system. The screw-on buffer fits both travel-wheel-system sizes 200 and 250.

Temperature range: -20°C to +60°C.

Weight: 0.8 kg

Product No. 480 710 84, Buffer Set, Matching Travel-Wheel System Size 200 and 250

Pin Connection Sets

Material: Steel

Consisting of: two pins, washers and retaining rings, threaded adjusting pins and nuts for lateral alignment and fixation.

Two sizes for **travel-wheel system size** 200 or 250. The pin connection set is used to mount the **travel-wheel system** into an existing hollow section when mounted from the side. One set required for each **travel-wheel system**.

Ordering Details:e.g.: Product No., Type, Size

Product No. Pin Set	System Size	W_{6min} mm	W_{7max} mm	Dh8/D9 mm	G mm	L mm	H mm	Weight kg

Horizontal Guide-Roller Arrangements

Material: Base: steel plate, zinc plated.

Damping elements: Polyamide (damping elements only for **travel-wheel system** with Hydropur-tyre travel wheel)

Version G: for **travel-wheel system** with cast wheel. Without damping element.

Version K: for **travel-wheel system** with Hydropur tyre. With damping element.

Consisting of: roller bracket, bearing, damping element and mounting bolts (damping element only for version K).

Two sizes for **travel-wheel system size** 200 or 250. The horizontal guide-roller arrangement is used for low-friction guidance and to precisely achieve individual track gauge dimensions. The guide roller is e.g. recommended for flanged wheels (version G) running on narrow tracks. The guide rollers are only used on one of the rails.

Product No. Guide Roller	Travel-Wheel System Size	Version	d mm	l mm	m mm	a mm	w mm	n mm	b mm	Weight kg

Geared Motors RBM/I for travel wheel systems

Material: Housing: Aluminium, painted blue (RAL 5009).
Gears: bevel-gear system, case hardened, fatigue endurable.
Lubrication: Mineral oil.
Motor: Three-phase AC

400V 50 Hz, dual speed, with brake.

Other motor and gear box versions (e.g. with frequency inverter or angular gear) on request.

Ready-to-mount dual-speed geared motors incl. adaptor flange (as torque support) to be combined with travel-wheel sets RB/I. The mounting position can be modified in steps of 15°.

Single Wheel Drive: one geared motor RBM/I is flange-mounted onto one travel-wheel system RB/I. In carriages two opposing travel-wheel sets have to be powered.

Central Drive Set: the geared motor is flange-mounted onto the travel-wheel system. The connection with the opposing travel-wheel system is done with a central drive set (this set has to be ordered separately). The connecting shaft (output shaft) is already mounted on the geared motors (covered with protection sleeve and protection cap).

Ordering Details:e.g.: Product No., Type, Size

Travel-Wheel System RB/I has to ordered separately.

Central Drive Set

Material: Splined shaft, coupling, washers and rings made from steel, shaft protection made from plastic.

Two sizes available suiting travel-wheel system 200 and 250. Two length for gauges up to 1500 mm or up to 2900 mm.

Consisting of: Splined shaft, coupling with pin, shaft protection, washers and retaining rings.

The central-drive set serves to combine two travel-wheel sets RB/I with a geared motor RBM/I to make up a central drive. To achieve this, the shaft is shortened to the required length on the coupling side, then the shaft protection cap is taken off the geared motor and the shafts are connected using the rigid coupling. The pin serves as stop inside the coupling. The shaft is fixed in the travel-wheel system with the retaining rings.

Ordering Details: e.g.: Product No, Type, Travel-Wheel System-Size, up to distance

Timing-Belt Drives - Description

General Description

Timing-belt drives enable a quiet operation and synchronous transmission of power. As they are maintenance free, these drives are very cost efficient. Due to varying requirements and consideration of the latest developments, there are a large number of different profiles, belt types and pulleys on the market. When non-positive drives (e.g. v-belt systems) are replaced, it is worth considering whether a conversion to a positive power transmission could be allowed from a safety point of view (some drives require slip at overload).

Selection and Dimensioning

The belt material and type of timing belt must be selected considering the specific situation (e.g. required features regarding machine or surroundings). There are performance tables and a user-friendly calculation programme on the internet to help you select the correct size. Small pulley diameters reduce the service life. And at least 6 teeth should be engaged at any time.

When consulting the performance tables, several application-specific operating factors must be considered.

Mounting and Maintenance

At least one pulley must be equipped with flanges. The axes must be parallel (deviation no more than $+0.5^\circ$). The belt must not be overstretched during mounting. For mounting and adjustment of the ideal belt there have to be sufficient possibilities for adjustment incorporated into the system.

Belt Tension

Each belt needs a certain pre-tension, depending on the type of belt, pulley diameter, center distance and the tangential force to be transmitted. The overall sum of tensioning and peripheral force must not exceed the permitted tensile force of the belt. The belt tension is best adjusted by altering the center distance. Otherwise a smooth tensioning pulley mounted on the outside or a toothed one on the inside of the belt may be used for adjustment.

Degree of degree of efficiency de

Depending on the type of belt (flexibility) and the number of teeth on the pulley (bending) the degree of efficiency can reach 98 %. Belts with tensile members of glass fibre cords (HTD and Inch) are particularly flexible.

Timing Belt Profiles

Type	Profile	Pitch mm	Overall Height** mm	Tooth Height mm	Tensile Force N*
	T2.5	2.5	1.30	0.70	120
	T5	5.0	2.20	1.20	330
	T10	10.0	4.50	2.50	780
	AT5	5	2.70	1.20	700
	AT10	10	5.00	2.50	1300

* Permissible tensile force at 10mm belt width.

** Hight may vary at open-length types.

Type	Profile	Pitch mm	Overall Height mm	Tooth Height mm	Tensile Force N*
	3M	3	2.40	1.20	100
	5M	5	3.60	2.10	208
	8M	8	5.60	3.40	375
	14M	14	10.00	6.10	425
	MXL	2.032	1.10	0.51	39
	XL	5.080	2.20	1.27	56
	L	9.525	3.60	1.91	98
	H	12.700	4.30	2.29	235

T Timing Belt Drives

- Classical, trapezoid profile in accordance with DIN 7721 with metric dimensions, pitch 2.5 mm, 5 mm and 10 mm in several widths. Pitch 20 mm and other widths available on request.
- Often used, cost-efficient, clean standard belt drive in many areas of machine building, e.g. also in the food industry. Polyurethane (PU) timing belts with tensile members of steel, little lengthening
- Little and light-coloured abrasion, good resistance against oil, fats and many chemicals. Temperature range -30° to $+80^\circ\text{C}$. Good flexibility.
- Open length belts from thermoplastic polyurethane TPU can get welded to endless belts in special lengths.
- cost-efficient pulleys made from aluminium (some also made from plastic) pre-bored (custom bore etc. at extra charge).
- T timing belt drives do **not** feature little backlash (low backlash or zero backlash pulleys can be especially manufactured on request).

HTD Timing Belt Drives

- Heavy-duty timing belt with half-round teeth profile, with metric dimensions, pitch 3 mm, 5 mm, 8 mm and 14 mm.
- Low-backlash belt drive with high efficiency used in many areas of machine building.
- Neoprene timing belts with tensile member of glass-fibre. Little, but dark abrasion. Temperature range -20° to $+100^\circ\text{C}$.
- Up to medium speed quiet. At higher speed some noise due to the fast movement of air out of the tooth gaps.
- Pitch-true, more expensive pulleys made from steel (pitch 3M made from aluminium, pitch 5M from 44 teeth made from aluminium).
- Pulleys pre-bored (custom bore etc. at extra charge), pitch 8M and 14M also prepared for Taper clamping bush.

AT Timing Belt Drives

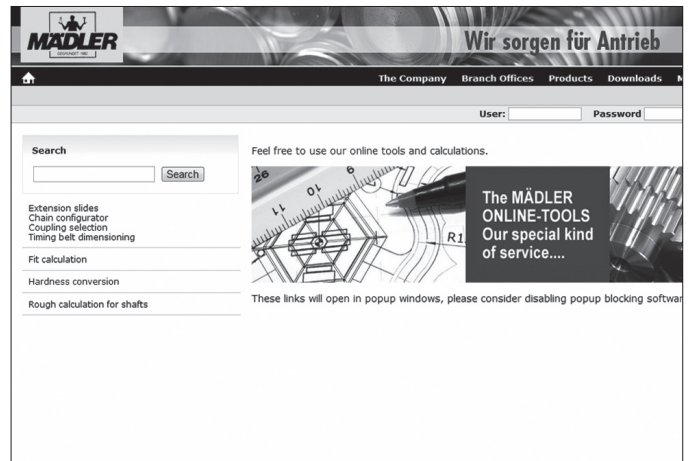

- Trapezoid profile especially designed to transmit high power, with metric dimensions, pitch 5 mm and 10 mm, in stock in several widths. Pitch 20 mm and other widths available on request.
- Clean belt drive used in many areas of machine building, e.g. also in the food industry.
- Polyurethane (PU) timing belts with tensile members of steel, little lengthening
- Little and light-coloured abrasion, good resistance against oil, fats and many chemicals. Temperature range -30° to $+80^\circ\text{C}$. Good flexibility.
- Open length belts from thermoplastic polyurethane TPU can get welded to endless belts in special lengths.
- Cheap pulleys made from aluminium (some also made from plastic) pre-bored (custom bore etc. at extra charge).
- AT timing belt drives do **not** feature little backlash (low backlash or zero backlash pulleys can be especially manufactured on request).

Inch Timing Belt Drives

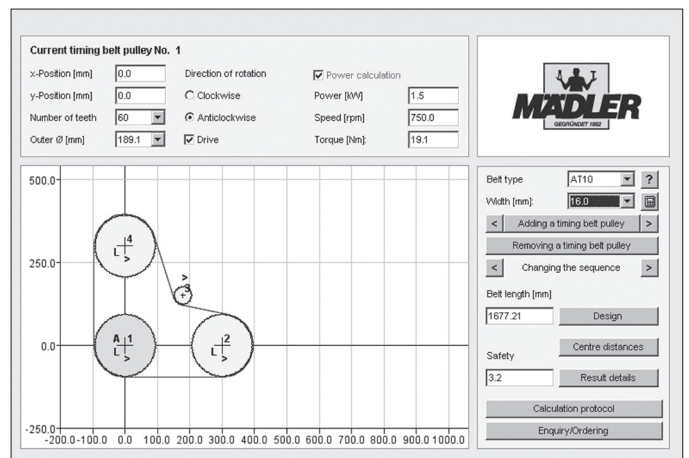

- Classical trapezoid profile in accordance with DIN 5296 with inch dimensions, profile MXL, XL, L and H (pitch $0.08'' = 2.032$ mm to $1/2'' = 12.7$ mm), in several widths. Other sizes on request.
- Classical timing-belt drive which is, apart from the favoured MXL-profile, usually not used in newly designed systems anymore.
- Neoprene timing belts with tensile member of glass-fibre. Low noise, little, but dark abrasion. Temperature range -20° to $+100^\circ\text{C}$.
- Pulleys made from steel or cast iron (pitch MXL and XL made from aluminium), pre-bored (custom bore, etc. at extra charge).
- Inch timing belt drives do **not** feature little backlash.

Timing Belts: Online – Calculation Program on the Internet

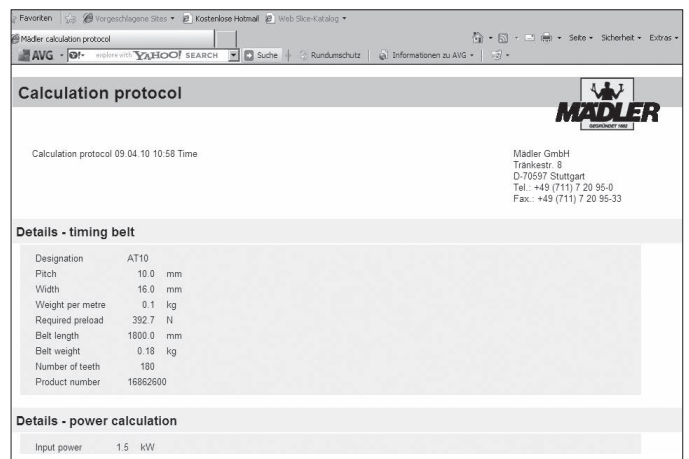

At www.maedler.de in the internet you click at the button **MÄDLER®-Tools** and you get to a comfortable online calculation programme. This programme contains all common sizes and ensures a fast and safe set up of timing belt drives.

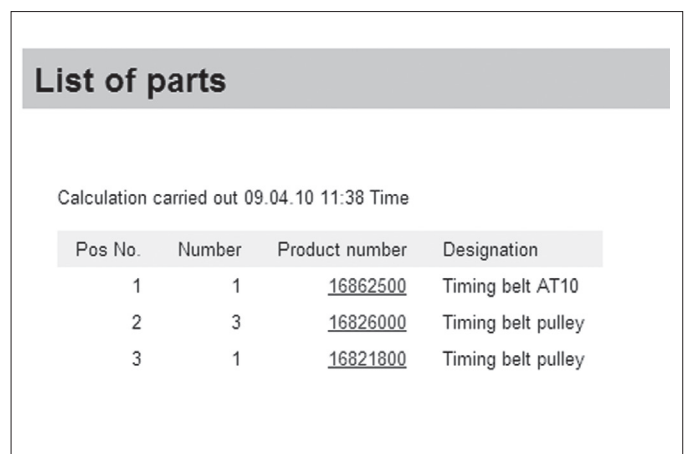

The number and location of the pulleys can be altered. Select the profile and the number of teeth. Enter your performance data and let the system work out the required belt width. **ATTENTION:** The performance data either has to be entered for every single pulley or the performance calculation has to be turned off for the output pulleys. The determination of the belt length is simplified through the use of a scroll-window listing the standard belt lengths. In a next step please check whether the stated safety factor is sufficient. If the system is over or under dimensioned, choose larger or smaller timing belt profile respectively.

For your own documentation you can print out a calculation report with all parameters and results of your drive set up. If a pop-up blocker is activated in your Internet Explorer, it has to be turned off first.

The parts list contains all selected products and simplifies the ordering process. You can print, export or save the parts list. By clicking on the Product No. you get to the internet page of the respective product group. On these pages you can get collect information, even look at 2D and 3D CAD drawings.

Timing belt drives – dimensioning and calculation factors

Calculation of the Power P_B

$$P_B = P_N \times (K_1 + K_2 + K_3 + C_1)$$

P_B : Selection Power [kW]

P_N : Nominal Power Driving Motor

K_1 : Load Factor (Table 1)

K_2 : Tensioning Pulley Factor (Table 2)

K_3 : Transmission Ratio Allowance (Table 3)

C_1 : Teeth Meshing Factor (Table 4)

Notes Regarding the Calculation

The corrective factors below are in particular fitting for T and AT timing belt drives. This means that the calculations below only render exact results for these belt types. The formulas are however generally valid, which means the results are roughly correct for HTD and Inch belt types. For an exact and comfortable calculation please use our online calculation programme at www.maedler.de, see page 130.

Table 1: Corrective Factor for Load K_1

Examples for machines used: Machines that are not mentioned below have to be matched to a group with similar load.	Example for Driving Units					
	Starting Torque up to 3 times Nominal Torque			Starting Torque over 3 times Nominal Torque		
	AC Motors (standard and synchronous motors) DC Shunt-Wound Motor Combustion engines with two or more cylinder			Electric motors (with high starting and breaking torque) DC Compound Motors Combustion engines with one cylinder		
	Daily Operating Time (hours)					
	up to 5	up to 12	up to 24	up to 5	up to 12	up to 24
Office Machines, Household Machines Counting Machines	1.0	1.2	1.4	1.2	1.4	1.6
Wood-working Machines, Printing Machines Fans and Blowers	1.2	1.4	1.6	1.4	1.6	1.8
Machine Tools, Textile Machines Laundry Machines	1.3	1.5	1.7	1.5	1.7	1.9
Paper Machines, Reciprocating Engines Hoisting Devices	1.4	1.6	1.8	1.6	1.8	2.0

Table 2: Corrective Factor for Tens. Pulley K_2

Mounting Position of Tensioning Pulley K_2	
Inner Side Slack Length	0.0
Outer Side Slack Length	0.1
Inner Side Tight Length	0.1
Outer Side Tight Length	0.2

Table 3: Corrective Factor for Ratio K_3

Transmission Ratio	K_3
1.00 - 1.24	0.4
1.25 - 1.74	0.3
1.75 - 2.49	0.2
2.50 - 3.49	0.1
over 3.50	0.0

Table 4: Teeth-in-Mesh Factor C_1

Teeth in mesh					
No. of Teeth in Mesh:	≥ 6	5	4	3	2
Teeth-in-Mesh Factor C_1 :	0	0.25	0.7	1.5	4

Selection of Belt Type

For the calculation of P_B select belt type, pitch, width and pulley diameter by looking at the Performance Table page 132. Please consider the width factors mentioned in the table.

Selection of Pulley

Use the largest pulley diameter possible. A larger diameter leads to a reduction of the bending load and of the required belt width. We recommend the standard pulleys listed in the catalogue. The respective permissible torques can be found in the Performance Tables page 132.

Checking the Belt Speed

Belt speeds above 30 m/s require an exact balancing of the pulleys. The belt speed is calculated with the formula below:

$$v = (d_w \times n) / 19100$$

v : belt speed (m/s)

d_w : effective diameter of the pulley (mm)

n : torque of the pulley (min^{-1})

Selecting the Belt Length

When selecting the belt length, always consider the lengths listed in the catalogue. The belt length for a simple drive with two toothed pulleys and a transmission ratio of 1:1 can be easily calculated from the effective diameter of the toothed pulley and the centre distance:

Effective length of the belt = effective circumference of the toothed pulley plus twice the centre distance

The effective length of a belt and the centre distance for drives with a ratio other than 1:1 or with more than two toothed pulleys can be determined from a drawing or, even simpler, by using the online tool at www.maedler.de, **MÄDLER®-Tools** (see page 130).

The permissible performance figures for any timing belt width can be calculated by multiplying the figures in the table above with the respective width factors.

Width Factors 8M and 14 M

Belt Width	10	15	20	25	30*	30	40	50	65	85	100	115
Width Factor	0,35	0,56	0,77	1,0	1,14	1,21	1,46	2,1	2,76	3,66	4,32	4,98

* Only for profile 14M.

In this area of the table the service life might be shortened with increasing torque and a ratio close to 1 : 1. Please ask for more information.

Refers to cases where both circumstance come together. (shorter service life and no pulleys made from cast iron).

Speeds higher than 30 m/s.
Cast iron pulleys cannot be used here.

Standard Timing-Belt Drives (Inch Pitch)

Pitch MXL, Performance Figures in W for 1" Timing Belt Width

The permissible performance figures for any timing belt width can be calculated by multiplying the figures in the table above with the respective width factors.

Width Factors, Inch Pitch

Timing Belt Width	1/4"	3/8"	7/16"	1/2"	5/8"	3/4"	7/8"	1"	1 1/4"	1 1/2"	1 3/4"	2"
Width Factor	0,22	0,28	0,35	0,42	0,57	0,71	0,86	1,00	1,29	1,56	1,84	2,14

In this area of the table the service life might be shortened with increasing torque and a ratio close to 1 : 1. Please ask for more information.

Speeds higher than 30 m/s.
Cast iron pulleys cannot be used here

Standard Timing-Belt Drives (Inch Pitch)

The permissible performance figures for any timing belt width can be calculated by multiplying the figures in the table above with the respective width factors.

Width Factors, Inch Pitch

Timing Belt Width	3/8"	7/16"	1/2"	5/8"	3/4"	7/8"	1"	1 1/4"	1 1/2"	1 3/4"	2"
Width Factor	0,28	0,35	0,42	0,57	0,71	0,86	1,00	1,29	1,56	1,84	2,14

In this area of the table the service life might be shortened with increasing torque and a ratio close to 1 : 1. Please ask for more information.

Speeds higher than 30 m/s. Cast iron pulleys cannot be used here.

T Pulleys with Metric Pitch and 2 Flanges Made from Acetal Resin

Material: Acetal resin in injection-moulded version, colour black. Bores machined. High hardness and low coefficient of friction

which means they can be used in various set-ups, e.g. also under water. Material reference values see page 821.

Ordering Details: e.g.: Product No. 160 512 00, Pulley, Pitch T 2.5, 12 Teeth, Timing Belt Width 6 mm

Note regarding pulleys made from acetal resin

Inside these injection-moulded parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

**Reworking within
24h-service possible.
Custom made parts
on request.**

T Pulleys, Pitch 2.5 mm Made from Aluminium

Material: Aluminium 6082-T6, UNI 9006. Flanges zinc-plated steel.

HTD Pulleys Profile 3M

Material: Aluminium 6082-T6, UNI 9006.
Flanges zinc-plated steel.

The functionality of a V-belt drive is largely influenced by the quality of the used pulley.
HTD pulleys are precision components, manufactured pitch-true with special cutters. This leads to a precise meshing of teeth.

HTD Pulleys Profile 5M

Material: Up to a Teeth Number of 40 phosphated steel, from a Teeth Number of 44 aluminium.

The functionality of a V-belt drive is largely influenced by the quality of the used pulley. HTD pulleys are precision components, manufactured pitch-true with special cutters. This leads to a precise meshing of teeth.

Timing belt width 85 mm available on request.

Reworking within
24h-service possible.
Custom made parts
on request.

Mounting Options for Drive Wheels

There are several possibilities for mounting driving wheels (sprockets, V-Belt Pulleys, pulleys, spur gears etc.) or hubs on shafts. Most wheels are stocked with a rather small bore to allow for further machining. Machining works as drilling out, keywaying a.s.o. can be done at extra charge.

Please note: for several shaft diameters a number of sprockets, V-belt pulleys, spur gears and worm-gear sets are in stock "ready-to-install", i.e. with custom bore and keyway or prepared for Taper clamping bushes.

Fixing Pins

A hole is drilled through hub and shaft and both parts are then connected with a fixing pin. Usually only one side of the hub is pre-drilled, then the wheel is pushed onto the shaft and the hole is drilled through both shaft and the other side of the hub. Then the pin is driven in. This mounting method is suitable for low torques.

Feather Key Connection

Shaft and hub both receive a keyway, a key is pushed into the keyway of the hub. The wheel is pushed onto the shaft and secured against axial movement (with a set screw or with a stepped shaft and axial screw and washer at the end of the shaft). The most common kind of keyway is DIN 6885/1. Key connections are suitable for medium torques. Keys DIN 6885 see page 578. Boxes with an assortment of keys DIN 6885 see page 577.

Clamping Sets, Clamping Bushes and Shrink Disks

Clamping sets and thin-walled clamping bushes are available for various diameters. They allow fast and easy mounting on round shafts. A keyway is not required. Shrink disks are special clamping sets which press a thin-walled hub onto a shaft. Clamping connections are suitable for rather high torques.

Clamping sets and bushes, and shrink disks see page 330.

Taper Clamping Bushes

These customary conical bushes are used for easy and fast mounting of driving elements in Taper version. They can be used with and without key.

The bushes are available with various outer dimensions. For every outside measure there are bushes with many different bores available. This mounting method is cost-efficient and fast, and suitable for rather high torques. A large selection of cost-efficient driving elements in Taper version are available ex stock.

Taper clamping bushes see page 360.

Welding hubs for taper bushes see page 362.

Taper sprockets see page 74, 92, 101.

Taper V-belt pulleys see page 183.

Taper pulleys see page 154.

Taper couplings see page 388.

Standard Pulleys, Inch Pitch DIN 5294

Material at Pitch XL: Aluminium 6082-T6, UNI 9006, flanges zinc-plated steel. Pre-bored*.

Material at Pitch L: Up to a Teeth Number of 48 phosphated steel, from a Teeth Number of 50 grey cast iron GG20. Pre-bored.

Ordering Details: e.g.: Product No. 180 310 00, Pulleys, Pitch XL = 1/5", 10 Teeth, Timing Belt Width 037, 2 Flanges

Pitch XL = 1/5" (5.08 mm) for Timing Belt Width 037 = 9.53 mm

Flanges for Timing Belt Pulleys

Material: Steel, zinc-plated.

Flanges for timing belt pulleys, for custom-made parts or serial production. For economical reason, normally the flanges are mounted only at the smaller pulley. Often, the flanges get fixed by beading: On a turntable, with a rolling tool, hub material will get shaped over the flange. A beading material overhang of 0.5mm is recommended.

Sold by piece. Other sizes are available on request.

Ordering Details: e.g.: 2 Pieces Product No. 160 101 00, flange 0.5mm,
Ø 13 x 10 x 6mm

Custom-made timing belt pulleys from our own production available at short time.

Fixing Plates for Timing Belts

Material: Aluminium UNI 9006-T6.

Ordering Details: e.g.: Product No. 162 699 00, Fixing Plate, Pitch T5, Width 10 mm

The fixing plates are used to connect the belt ends. Practical examples see page 172.

Timing Belts - Welding and Customized Products

Timing Belts in Special Lengths:

- Open length belts from thermoplastic polyurethane (TPU) can get welded to endless belts of any number of teeth, beginning from pitch 5mm and width 10mm. Minimum length 400mm, depending on the belt profile and width.
- The welding is done directly in the timing belt stock of **MÄDLER®**. Normally, the welded belts should be sent to the customer within 24 hours after receiving the order.
- From one-off pieces to large series at very short notice.

Cutting and Welding of Timing Belts:

- The ends get punched into the shape of fingers.
- The welding is done at high temperature. By this, the plastic melts and leads to a homogenous structure.
- After cooling down, the belt is ready to use and can be shipped immediately.
- The tensile members don't get welded. So the tensile strength of a welded belt is approximate 50% of an endless extruded belt.
- Alternatively, belts in special lengths also can get endless extruded. Minimum lengths and minimum order quantities have to be considered. Price and delivery time on request.

Price Calculator on the Internet:

- Soon at www.maedler.de in the section **MÄDLER®-Tools**.
- Quick overview about the profiles, widths and minimum lengths of weldable belts.
- After having selected a belt, you see the part number, product text and the prices for several quantities.

Other Special Belts (on request):

- V-belts and timing belts with tissue layer.
- Timing belts with teeth in V-formation.
- Self-tracking timing belts with central guide.
- Conveyor belts with texture or welded cams on the backside.
- Round belts and flat belts.

Timing Belts Profile T and AT

Material: Endless belts from cast polyurethane (PU), with steel tensile member. Open length belts from thermoplastic polyurethane TPU, weldable, with steel tensile member.

Timing belts in metric dimensions. Classical shape with trapezoidal teeth.

Type T: Standard type for normal set-ups in size T 2.5, T 5 and T 10 in several widths.

Type AT: Reinforced type for the transmission of higher torques in sizes AT 5 and AT 10 in several widths. Due to their lower flexibility AT timing belts require a larger pulley diameter than T timing belts.

Please note: T timing belts only run on T pulleys. AT timing belts only run on AT pulleys.

Special length: Open length belts, which are sold by the meter, are made from thermoplastic TPU and can get welded. To do this, the belt ends are cut in V-shape or finger shape, depending on the belt width, and then the TPU gets welded. The steel tensile member doesn't get welded. Through the large overlap at the welding point a high durability is reached. It does however rate approx. 50% below the power transmission rate of endless belts.

T-Timing Belts Profile T 2.5

Material: Endless belts from cast polyurethane (PU), with steel tensile member. Open length belts from thermoplastic polyurethane TPU, weldable, with steel tensile member.

HTD-Timing Belts

Material: Neoprene with glass-fibre tensile member.
Contact surface lined with nylon reinforcement.

HTD (High Torque Drive) timing belt with semi-circular teeth profile for a more constant progress of stress in the tooth profile, for the transmission of high loads.

Ordering Details: e.g.: 171 105 00, HTD Timing Belts, Profile 3M, 111 mm, Belt Width 9 mm, 37 Teeth

HTD-Timing Belts

Material: Neoprene with glass-fibre tensile member.
Contact surface lined with nylon reinforcement.

HTD (High Torque Drive) timing belt with half-round teeth for a more even progress of stress in the tooth profile, used for the transmission of high powers.

Ordering Details: e.g.: 175 105 00, HTD Timing Belts, Profile 8M, 480 mm, Belt Width 20 mm, 60 Teeth

The pitch XH and XXH are not listed above, but can be supplied on request.

Belts sold by the meter see page 172.

Performance figures see page 132.

Permissible tensile forces for the belts see page 129.

Tensioning Rollers and Tensioning Elements for Timing Belts

Tensioning rollers are used for tensioning on the outside of the belt (back of belt). The tensioning rollers can either be mounted rigidly or be combined with tensioning elements to make up an elastic belt tensioner.

Note: tensioning rollers mounted on the outside of the closed span, shorten the service life of the belt due to alternate bending conditions. This means that when an outside tensioning roller is mounted a corrective factor of at least 1.2 has to be used when calculating the drive. If the belt is tensioned from the inside, a toothed pulley must be used (pulley with ball bearing only made to order).

Tensioning Rollers

Material: Short roller made from high-grade industrial plastic. Mounted on a suitable tensioning element, the tensioning roller becomes a ready-to-mount belt tensioner or on its own it can be used as idler. It runs on two permanently lubricated 2-Z ball bearings.

Tensioning element has to be ordered separately.

Product-No.	Diameter A mm	Product No. Tensioning Element matching	B mm	C mm	D mm	E max. mm	F mm	Weight kg

140 878 00	80	140 804 00	90	8	25	10	M20	1,15

Tensioning Elements

Material: Lever made from St52, housing up to $\varnothing 78$ mm made from sintered steel, over $\varnothing 78$ mm made from grey cast iron GG20.

Tensioning elements are painted blue and are supplied with a zinc-plated screw and a spring washer.

These tensioning element can be used for tensioning all common kinds of chain and belt drives. The spring elements are based on highly-elastic natural rubber with a good shape memory and are designed for applications in temperatures from -40° to $+80^{\circ}$ C. Can be used for both tensioning directions.

V-Belt Pulleys for Taper Bushes, 3 Grooves

Material: cast iron EN-GJL200.

Taper V-belt pulleys similar to DIN 2211 or DIN 2217 matching narrow V-belts DIN 2215 und DIN 7753.

Design:

A = spoked pulley

B = dished pulley

V = solid pulley

Spare screws for Taper Bushes

Material: Steel.

Supply: One screw (order quantity as needed).

Taper bushes have two or (from size 3030) three screws depending on size.

Ordering Details: e.g.: Product No. 622 501 99, Spare Screw , Taper Bush 1008 and 1108

Product No.	to match Taper bush	Size inch	Screw type	Tightening Torque Nm	Weight g
622 501 99	1008 and 1108	1/4"	Set screw with internal hexagon	5.6	1.9
622 503 99	1210 to 1615	3/8"	Set screw with internal hexagon	20	5.2
622 505 99	2012 and 2017	7/16"	Set screw with internal hexagon	30	11
622 506 99	2517 and 2525	1/2"	Set screw with internal hexagon	50	16.4
622 507 99	3020 and 3030	5/8"	Set screw with internal hexagon	90	33.2
622 510 99	3525 and 3535	1/2"	Screw with internal hexagon	90	49.7

V-Belt Pulleys Made from a Special Light Alloy with Cast-Iron core, 1 Groove

Bimetal V-belt pulleys similar to DIN 2211 or DIN 2217 matching narrow V-belts DIN 2215 und DIN 7753.

V-belt pulleys with nominal diameters up to and including 250 mm are supplied as solid pulley, from 280 mm Ø as spoked pulley.

¹⁾ Can only be used with standard V-belt DIN 2215 .
* Without cast-iron core.

V-Belt Tensioner with Mounted V-Belt Pulley

Material: Housings up to $\varnothing 78$ mm made from sintered steel, over $\varnothing 78$ mm made from grey cast iron GG20.
Lever St52, V-belt pulley cast steel.

Matching narrow V-belts DIN 2215 und DIN 7753.

Pulley with sealed ball bearings, permanently lubricated.

Measur A of the pulley can be adjusted by distance-washers on the axis, which is screwed onto the tensioner.

Can be used for both tensioning directions.

Ordering Details: e.g.: Product No. 140 850 01, SPZ, 1 Groove, Dw=90mm

Tensioning Rollers

Material: Short roller made from high-grade industrial plastic.

Tensioning rollers are used for tensioning (or as an idler) on the outside of the belt (back of belt). The tensioning rollers can either be mounted rigidly or be combined with tensioning elements to make up an elastic belt tensioner.

It runs on two permanently lubricated 2-Z ball bearings.

Tensioning element has to be ordered separately.

Ordering Details: e.g.: Product No. 140 872 00, Tensioning Roller $\varnothing 30$ mm

Tensioning Elements in Standard Version

Material: Housing up to $\varnothing 78$ mm made from sintered steel, over $\varnothing 78$ mm made from grey cast iron GG20, lever made from St52.

Can be used for tensioning all common kinds of chain and belt drives. The elastomeric inserts are based on highly-elastic natural rubber with a good shape memory and are designed for applications in temperatures from -40° to $+80^{\circ}$ C

The tensioning elements are painted blue and supplied with a zinc-plated screw and spring washer. Can be used for both tensioning directions. Temperature range: -40° to $+80^{\circ}$ C.

Important

During mounting the belt must be pre-tensioned. After running in for 15 - 20 minutes the belt needs to be retightened.

At a continuous temperature of over 60° standard V-belts have only a short service life. Oil, Fats and chemicals should be kept away from the drive as they destroy the standard V-belts. Intermediate length are available on request.

* Toothed belt. Subject to change without notice.

General Basics for Spur Gears

Spur gears enable a non-slip power transmission between two parallel-mounted shafts. The spur gears listed in the catalogue are involute gears with a pressure angle of 20°.

Please note that gears with a number of teeth < 17 are undercut for manufacturing reasons (one reason for this is the simple calculation of the centre distance). The centre distance tolerances depend on the tooth quality in line with DIN 3964. The modules for spur gears used in the catalogue were derived from DIN 780 Series 1.

The formulas below apply to straight and helical spur gears for the usual gear-cutting tools (see table) and for the addendum modification 0 for sprocket and wheel (the so-called reference centre distance tooth system).

Teeth straight

to be calculated	given unit	formula
No. of Teeth = z	Pitch Ø and Module	$\frac{d}{m}$
	Addendum-Circle Ø	$\frac{d_a - 2m}{m}$
Module = m in mm	Pitch	$\frac{t_0}{\pi}$
	Tip Ø and No. of Teeth	$\frac{d_a}{z + 2}$
	Pitch Ø and No. of Teeth	$\frac{d}{z}$
Pitch Ø = d in mm	No. of Teeth and Module	$z \cdot m$
	No. of Teeth and Tip Ø	$\frac{z \cdot d_a}{z + 2}$
	Tip Ø and Module	$d_a - 2m$
Tip Ø = d _a in mm	No. of Teeth and Module	$(z + 2) \cdot m$
	No. of Teeth and Pitch Ø	$d + \frac{2d}{z}$
	Pitch Ø and Module	$d + 2m$
Centre distance = a in mm	No. of Teeth and Module	$\left(\frac{z_1 + z_2}{2}\right) \cdot m$
	Pitch Ø and Pitch Ø	$\frac{d_1 + d_2}{2}$
Reduction Ratio = i	No. of Teeth and No. of Teeth	$\frac{z_2}{z_1}$
	Speed and Speed	$\frac{n_1}{n_2}$
Torque = Md in Nm	Power and Speed [kW] [min ⁻¹]	$9550 \cdot \frac{P}{n}$
Peripheral Speed = V in m/sec.	Pitch Ø and Speed [mm] [min ⁻¹]	$\frac{\pi \cdot d \cdot n}{60 \cdot 1000}$

Material quality: Information about the material quality can be found at each individual group of gears.

Teeth helical

to be calculated	given unit	formula
No. of Teeth	Pitch Ø, Standard Module and Spiral Angle	$\frac{d \cdot \cos \beta}{m_n}$
	Tip Ø, Standard Module and Spiral Angle	$\frac{(d_a - 2 m_n) \cdot \cos \beta}{m_n}$
Normal Module	Standard Pitch	$\frac{t_{n0}}{\pi}$
	Pitch Ø, No. of Teeth and Spiral Angle	$\frac{d \cdot \cos \beta}{z}$
	Tip Ø, No. of Teeth and Spiral Angle	$\frac{d_a}{z} + 2 \cos \beta$
Real module	Reference Circle Pitch	$\frac{t_s}{\pi}$
	Standard Module and Spiral Angle	$\frac{m_n}{\cos \beta}$
	Pitch Ø and No. of Teeth	$\frac{d}{z}$
Pitch Ø	No. of Teeth, Standard Module and Spiral Angle	$\frac{z \cdot m_n}{\cos \beta}$
	No. of Teeth, Tip Ø and Spiral Angle	$\frac{z \cdot d_a}{z + 2 \cdot \cos \beta}$
	Tip Ø and Standard Module	$d_a - 2 m_n$
Tip Ø	No. of Teeth, Standard Module and Spiral Angle	$\left(\frac{z}{\cos \beta} + 2\right) m_n$
	Pitch Ø and Standard Module	$d + 2m_n$
Centre distance	Pitch Ø, No. of Teeth and Spiral Angle	$d + \frac{2d \cdot \cos \beta}{z}$
	No. of Teeth, Standard Module and Spiral Angle	$\left(\frac{z_1 + z_2}{2}\right) \frac{m_n}{\cos \beta}$
Spiral Angle	Pitch Ø and Pitch Ø	$\frac{d_1 + d_2}{2}$
	Standard Module u. Real Module	$\frac{m_n}{m_s} = \cos \beta$
	Standard Module, No. of Teeth and Pitch Ø	$\frac{z \cdot m_n}{d} = \cos \beta$

Recommendations for the Lubrication of Spur Gear Units

Peripheral Speed	Lubrication	Lubricant
up to 1 m/s	Application of Lubricant	Adhesive Lubricant
up to 4 m/s	Splash Lubrication/Spray Lubrication	Grease or Adh. Lubricant
up to 15 m/s	Splash Lubrication	Oil
over 15 m/s	Pressure-Circulation or Spray Lubrication	Oil

Note Regarding the Torque-Values Stated in the Catalogue

The torque values given for gears in the dimension tables (the value "perm. MT" stated in Nm or Ncm) only relate to the teeth, without considering the shaft diameter or key size.

The load bearing capacity calculations are based on the basic principles regarding the pitting resistance of the tooth flanks and the occurring tooth root stress. The calculations are based on the DIN 3990 (Method B). For the calculation, the following assumptions were made:

Calcul. Factor/Determining Factor	Abbreviation	Value	Note
Calculation Method	-	-	DIN 3990, method B
DIN Quality	-	8	-
Tooth-Number Ratio	U	1	If $U > 1$, the flank safety for long and short addendum teeth increases while the tooth-root safety decreases For other tooth-number ratios please check both pinion and gear!
Manufacturing Tool: Addendum/Dedendum/ Tip Rounding	$h_{aPo}/h_{fPo}/rho_{aPo}$	1.25/1/0.25	Hob
Flank Safety	S_H	1.0	Endurance strength 10.000 h (for steel)
Tooth-Root Safety	S_F	1.5	Endurance strength 10.000 h (for steel)
Application Factor	K_A	1.25	Industrial gear mechanisms, uniform, light shocks.
Dynamics Factor	K_V	1.0	Usually without great influence
Load Distribution over Width	K_{Hbeta}	1	Idealised; requires precise, rigid and symmetric mounting
Lubricant/Surface Roughness Speed Factor	$Z_L * Z_V * Z_R$	1	<ul style="list-style-type: none"> sufficient oil-lubrication relative surface roughness $R_{Z100} = 10$ peripheral speed 10 m/s
Lifetime Factor	Z_N	1	Endurance strength 10.000 h (for steel)
Operating temperature for plastic gears	T_{Betr}	up to 60°C	The material parameters of plastic gears largely depend on the temperature

The load bearing capacity of a gear depends on various different factors. The stated torques are only reference values, serving to facilitate the selection process. If necessary, a specific calculation of strength and load bearing capacity must be carried out for each application.

Depending on the operating conditions the wear lifespan may be influenced by adequate grease/oil lubrication. Please also note that insufficient lubrication may lead to scuffing of the gear flanks.

IMPORTANT

Please make sure you always check the permissible torque separately for the pinion and the gear side!
Due to their higher elasticity plastic gears are calculated with a

K_{Hbeta} of 1. Gears made from brass and zinc-die-cast are also calculated with a K_{Hbeta} of 1, as a good running-in characteristic is assumed for these materials.

For the materials used, the following characteristic values were taken as basis:

Material	Perm. Pulsating Fatigue Strength under Bending Stress s_{bw} in N/mm ²	Perm. Flank Pressure s_{Hlim} in N/mm ²
POM	28 (VDI-2545)	40 (VDI-2545)
Acetal Resin	28 (VDI-2545)	40 (VDI-2545)
PA12G	40	48
ZnAl4Cu1	60	150
Ms58 (2.0401)	100	250
11SMnPb30 (alt: 9SMn28K)	150	350
C45 heat treated	200	590
42CrMo4 hardened	350	1360
16MnCr5 case hardened	400	1630
X10CrNiS18 9 (1.4305, stainless, austenitic)	200	400

Note Regarding the Machining

Inside these die-cast parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

**Reworking within
24h-service possible.
Custom made parts
on request.**

Spur Gears Made from Acetal Resin with One-Sided Hub, Straight Tooth System

In die-cast version.
Bores machined.
Pressure angle 20°.

With high hardness and low friction coefficient these plastic gears can be used in various set-ups, even under water. Material reference values page 821.

Note regarding the machining

Inside these die-cast parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

Spur Gears made from POM White, with One-Sided Hub, Milled Teeth, Straight Tooth System

Tooth quality 10d25 DIN 3967.
 Pressure angle 20°.
 Untoleranced dimensions in accordance with DIN ISO 2768 m.
 Temperature limit: continuous 100°C, only short time 140°C.
 Water absorption (satiated) 0.5% Cws.
 Other material reference values page 821.

Spur Gears Made From Plastic with Steel Core, Milled, Straight Teeth

Material: Outer part: Plastic PA 12 G.
Steel core: Choice of C45 or Stainless Steel 1.4305.

Temperature

Tooth quality 8e25 DIN 3967.
range -60°C to +120° C, short periods 150° C.

- Special plastic with excellent material properties.
- Enables snugly fitting, high strength shaft-hub connection.
- Optimal force transmission due to cylindrical contact area.
- Light, silent and clean, with excellent dry running properties.

Ordering Details: e.g.: Product No. 218 550 25, spur gear, module 1.5, 25 teeth

On request:

Other versions and components made from PA 6 G / PA 12 G without core or with aluminium core.

Plastic PA 12 G

Produced using the vertical casting process.
High-molecular, high crystalline and almost stress free.
Very low moisture absorption, excellent dimensional stability.
High viscosity even at very low temperatures.
Very good mechanical and chemical resistance.

Steel core

Core with cylindrical body surface, knurled, permanently cast-in.
As standard made from C45 and 1.4305.
On request in aluminium.
Bore tolerance H7, finished after casting.
The steel core allows the transfer of high torque even for small shaft diameters and correspondingly small parallel key connections.

Spur Gears Made From Plastic with Steel Core, Milled, Straight Teeth

Material: Outer part: Plastic PA 12 G.
Steel core: Choice of C45 or Stainless Steel 1.4305.

Temperature

Tooth quality 8e25 DIN 3967.
range -60°C to +120° C, short periods 150° C.

- Special plastic with excellent material properties.
- Enables snugly fitting, high strength shaft-hub connection.
- Optimal force transmission due to cylindrical contact area.
- Light, silent and clean, with excellent dry running properties.

Spur Gears Made from Steel, with One-Sided Hub, Slim Design, Milled Teeth, Straight Tooth System

Material: 11SMnPb30 up to 80 mm Ø, above C45.

Tooth quality 8d25 DIN 3967.

Pressure angle 20°.

Ordering Details: e.g.: Product No. 213 010 00, Spur Gear, 11SMnPb30, Module 1.0, 10 Teeth

Module 1.0 Tooth Width b = 6.5 mm

Spur Gears with One-Sided Hub, Milled Teeth, Straight Tooth System, Teeth Induction Hardened

Material: C45. Teeth milled in quality 8d25 DIN 3967.
 After milling, the tooth area is induction hardened, 54 + 4 HRC.
 The hardening sets the tooth quality to 10-11.
 Pressure angle 20°.

Ordering Details: e.g.: Product No. 214 881 12, Spur Gear, Hardened, Module 1, 12 Teeth

Module 1 Tooth Width b = 15 mm

Spur Gears Made from Brass and Steel with One-Sided Hub, Helical Tooth System

Material: Module 0,3/0,5: Brass Ms58 (2.0401).
 Module 1,0: Steel 11SMnPb30.

20° helical tooth system. Pressure angle 20°. Milled teeth.

These gears are designed to be used in combination with the helical-toothed gear racks page 257. If this gear is used to drive a mating gear instead, this mating gear must have the same lead angle and the opposite tooth direction (left hand).

Precision Spur Gears, Helical Tooth System, Case Hardened, with Ground Teeth Flanks

Material: Steel 16MnCr5.

Tooth quality 7e25.

Helical tooth system, left hand 19° 31' 42".

Case hardened, approx. 60 HRC.

Keyways in accordance with DIN 6885/1, tolerance P9.

Teeth, bores and faces ground. Matching helical-toothed gear racks page 264.

Ordering Details: e.g.: Product No. 251 020 20, Spur gear, Steel 16 MnCr5, Module 2.0, 20 Teeth, ground

* The real length is roughly one multiple of the pitch.

Gear Racks Made from Brass (Ms58), Straight Tooth System, Precisely Straightened

Pressure angle 20°.

The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances

Dimension h_a and $h_0 = -0.2$ mm

The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances. Dimension h_a and h_0 up to Module 2 -0.2 mm.

Ordering Details: e.g.: Product No. 260 601 00, Straight-Toothed Gear Rack, Module 0.3, 250 mm

Teeth cut with reference profile (RP) II in accordance with DIN 867/DIN 3972.

	Product No.	b mm	h_a mm	h_0 mm	Nominal Length L* mm	Weight g
Module 0.3	260 601 00	2	4	3,7	250	14

* The real length is roughly one multiple of the pitch.

** Special length.

Gear Racks Made from Brass (Ms58) and Steel (C45KG), Helical Toothed, Precisely Straightened

20° helical tooth system, left-toothed.
Pressure angle 20°.

The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances.

Dimensions h and $h_0 = -0.2$ mm.

The standardised left-toothed gear racks always need to be matched with a right-toothed pinion.

Ordering Details: e.g.: Product No. 269 601 00, Helical Toothed Gear Rack, Module 0.3, 250 mm

	Product No.	Material	b mm	h_a mm	h_0 mm	L mm	Weight g

Custom made parts
on request.

Gear Racks Made from Specially Treated Bright Steel C45KG, Milled Teeth, Straight Tooth System

Tooth quality 8d25
modelled on DIN 3962, 3967, 3968.
Pressure angle 20°. Precisely Straightened.
Cross-section tolerance $h_{11} = -1/10$ to $2/10$ depending on size.

All gear racks from **Module 2**, except for **nominal length 500 mm**, are cut off for **continuous linking**.

The teeth of the gear racks are not cut to join edge-to-edge, which leads to minor gaps when mounting. These gaps do, however, not cause any problems for the gears rolling across.

Total pitch error page 261.

Ordering Details: e.g.: Product No. 224 603 00, Gear Rack, C45KG, Module 1.0, 250 mm.

The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances. Dimensions h_a and h_0 up to Module 2 -0.2 mm, Module 2.5-4 -0.3 mm, Module 5-8 -0.4 mm

Teeth cut with reference profile (RP) II in accordance with DIN 867/DIN 3972.
Rounded edge at square bar of 15 up to 60 mm.
Chamfered edge at square bar of 80 mm

Gear Racks Made from Bright Steel C45KG, Teeth Milled and Induction Hardened

Milled, quality 8.

Tooth area induction hardened, 54 + 4 HRC.

The hardening sets the tooth quality to 10-11.

Pressure angle 20°.

The gear racks are **cut for continuous linking**. The teeth of the gear racks are not cut to join edge-to-edge, which leads to minor gaps when mounting. These gaps do, however, not cause any problems for the gears rolling across.

The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances. Dimensions h_a and h_0 up to Module 2 -0.2 mm, Module 3-4 -0.3 mm, Module 5 -0.4 mm

Ordering Details: e.g.: Product No. 241 886 05, Gear Rack, Module 2.0, 1000mm, hardened

Teeth cut with reference profile (RP) II in accordance with DIN 867/DIN 3972. Rounded edge.

Precision Gear Racks Made from Steel 16MnCr5, Tooth Area Induction Hardened, Teeth Ground

Tooth quality 7h25.
 Pressure angle 20°.
 Tooth area induction hardened,
 HRC 58±2.
 Ground all around including teeth.
 From Module 1.5 cut for continuous linking.
 Angle accuracy 0.02 mm,
 Parallelism on 500 mm = 0.03 mm,
 on 1000 mm = 0.05 mm,
 Tolerance to h_0 line
 on 500 mm = 0.03 mm,
 on 1000 mm = 0.05 mm.
 The width is machined with a tolerance of
 0.05.

Round Gear Racks Made From Steel

Tooth quality 8d25 modelled on DIN 3967.
Pressure angle 20°.
The teeth on the gear racks are manufactured using an overhead milling cutter. This leads to negative tolerances.

Dim. h_a and h_0 : to module 2 -0.2 mm
module 2.5 - 4 -0.3 mm
module 5 - 6 -0.4 mm

Gear Racks Made from Steel, Helical Toothed, Tempered, Teeth Milled

Material: high-quality, specially treated bright steel with approx. 900 N/mm² tensile strength.

Tooth quality 8e27.

Helical tooth system, right hand 19° 31' 42".

For continuous linking.

Matching left hand-toothed counterparts, to simplify the mounting, are available at cost.

Matching helical-toothed spur gears page 252.

General Basics about Bevel Gears

Bevel gears enable a non-slip power transmission between two shafts mounted at 90 degrees.

Available from stock are transmission ratios of 1:1 up to max. 1:5 (depending on the material used). Other than for spur gears, the module is not standardized, but is chosen with view to technical considerations. The module of the bevel gear is not a constant value, but it changes with the diameter.

Bevel Gears with Straight-Tooth System

to be calculated	given unit	formula	
Module = m	Pitch	$\frac{t}{\pi}$	
	Pitch \varnothing and No. of Teeth	$\frac{d}{z}$	
Pitch \varnothing = d	No. of Teeth and Module	$z \cdot m$	
Pitch (Cone) Angle Gear 1 = δ_{01}	No. of Teeth Gear 1 and Gear 2	$\frac{z_2}{z_1} = \tan \delta_{01}$	
Pitch (Cone) Angle Gear 2 = δ_{02}	Angle of Axles and Pitch (Cone) Angle, Gear 1	$\delta_a - \delta_{01}$	
Addendum Angle = χ_k	Pitch (Cone) Angle and No. of Teeth Module and Outer Cone Distance R_a	$\frac{2 \cdot \sin \delta_0}{z} = \tan \chi_k$	
		$\frac{m}{R_a} = \tan \chi_k$	
Tip \varnothing = d_a	Pitch \varnothing , Pitch (Cone) Angle and Module	$d + (2m \cdot \cos \delta_0)$	
	No. of Teeth, Pitch (Cone) Angle and Module	$z \cdot m + (2m \cdot \cos \delta_0)$	
Tip (Cone) Angle = δ_k	Pitch (Cone) Angle and Addendum Angle	$\delta_0 + \chi_k$	
Outer Cone Distance Cone Distance = R_a	Pitch (Cone) Diameter \varnothing and Pitch (Cone) Angle	$\frac{d}{2 \cdot \sin \delta_0}$	
Gear 1 = big gear, Gear 2 = small gear			
Torque = Md in Nm	Power and Speed	Gear 1	Gear 2
		$9550 \frac{P}{n_1}$	$9550 \frac{P}{n_2}$
Tooth Width maximum $0.4 \times$ Outer Cone Distance R_a .			
For Bevel Gears with a Shaft Angle larger or smaller than 90° , the following formula applies for the calculation of the Pitch (Cone) Angle			
$\frac{z_2}{z_1 \cdot \sin \delta_a} + \cot \delta_a = \cot \delta_{01}$			

Note: if δ_{01} is given, then $\delta_{k2} = \delta_a - (\delta_{01} - \chi_k)$
Addendum Angle is the same for both gears: $\chi_k = \chi_{k1} = \chi_{k2}$
Tangent = tan, Cotangent = cot

Material quality: information about the material quality can be found at each individual group of bevel gears.

Recommendations for the Lubrication of Bevel-Gear Sets

Peripheral speed	Lubrication	Lubricant
up to 1 m/s	Application of Lubricant	Adhesive Lubricant
up to 4 m/s	Splash Lubrication/Spray Lubrication	Grease or Adh. Lubricant
up to 15 m/s	Splash Lubrication	Oil
over 15 m/s	Pressure-Circulation or Spray Lubrication	Oil

Notes Regarding the Torque Values Stated

The load bearing capacity calculations for the bevel gears are based on the basic principles regarding the pitting resistance of the tooth flanks and the occurring tooth root stress. The calculations are based on the DIN 3991. For the calculation, the following assumptions were made:

If the transmission ratio is not 1 : 1 the stated max. torque applies to the smaller gear.

Calc. Factor/Determining Factor	Abbreviation	Value	Note
Calculation Method	-	-	DIN 3991
Normal Pressure Angle	-	20° (17.5° for spiral tooth system module 0.6 to 1.5)	
Spiral Angle	-	0° (38° for spiral tooth system)	
DIN Quality	-	8	-
Flank Safety	S_H	1.0 (apart from zinc)	Endurance strength 10.000 h (for steel)
Tooth-Root Safety	S_F	1.5	Endurance strength 10.000 h (for steel)
Application Factor	K_A	1.25	Industrial gear mechanisms, uniform, light shocks
Dynamics Factor	K_V	1.0	Usually without great influence
Load Distribution over Width	$K_{H\beta}$	1.5 (1 for Acetal Resin, Ms58 and ZnAl 4 Cu1)	Double-sided support
Lubricant/Surface Structure Speed Factor	$Z_L * Z_V * Z_R$	1	<ul style="list-style-type: none"> • sufficient oil lubrication • relative surface roughness $R_{Z100} = 10$ • peripheral speed 8 m/s
Lifetime Factor	Z_N	1	Endurance strength 10.000 h (for steel)
Operating temperature for plastic gears	T_{Betr}	up to 60°C	The material parameters of plastic gears highly depend on the temperature

The load bearing capacity of a bevel gear depends on various different factors. The torques stated are only reference values serving to facilitate the selection process. If necessary a specific calculation of strength and load bearing capacity must be carried out for each application.

Depending on the operating conditions the wear lifespan may be influenced by adequate grease/oil lubrication. Please also note that insufficient lubrication may lead to scuffing of the gear flanks.

IMPORTANT

Please make sure you always check the permissible torque separately for the pinion and the gear side!
Plastic gears are, due to the higher elasticity, calculated with a $K_{H\beta}$ of 1. Gears made from brass and zinc-die-cast are also calculated with a $K_{H\beta}$ of 1, as a good running-in characteristic is assumed for these materials.

In the torque calculation of zinc-die-cast bevel gears only the root strength was considered. Due to the material properties these gears are only to a limited extent suitable for continuous operation.

For the materials used, the following characteristic values were taken as basis:

Material	Perm. Pulsating Fatigue Strength under Bending Stress s_{bW} in N/mm ²	Perm. Flank Pressure U_{Hlim} in N/mm ²
Acetal Resin	28 (VDI-2545)	40 (VDI-2545)
ZnAl4Cu1	60	150
Ms58 (2.0401)	100	250
11SMnPb30 (alt: 9SMn28K)	150	350
C45 normalized	200	590
42CrMo4 hardened	350	1360
16MnCr5 case hardened	400	1630
X10CrNiS18 9 (1.4305, stainless, austenitic)	200	400

Bevel Gears Made from Acetal Resin, Straight-Tooth System, Ratio 1:1 to 5:1

Shaft angle 90°. Version: injection-moulded.

Bores from Module 1.5 machined.

Material properties see page 821.

Thermoplastic materials have a far larger thermal expansion than metals. This fact must be considered with view to the crown and flank clearance when mounting the gear. Crown clearance $S_k \sim 0.25 \cdot m$, flank clearance $S_c \sim 0.05 \cdot m$.

Thermal expansion coefficient = $1.1 \cdot 10^{-4} 1/^\circ\text{C}$.

The bevel gears are also available with smaller bores, or with feather key groove. Additional charge worked out on time basis.

Note Regarding the Gears Made from Acetal Resin

Inside these injection-moulded parts are some cavities caused by production. These parts should therefore not be drilled too deep. With larger bores or when grooving the cavities might become visible. This often does not affect the functionality.

* Basis for calculations see page 269.

Angular Drive with Acetal Bevel Gears, Ratio 1:1

Material: Housing made from zinc die-cast ZnAl4Cu1.
Shafts made from stainless steel 1.4301, dismountable.
Bevel gears from acetal resin, injection-moulded.

- Low cost angular gear drive, ratio 1:1, 6 sizes.
- Suitable for lower torques and intermittent use.
- Shafts running directly in the self-lubricating housing material.
- Easy to mount and maintenance-free.

Shaft angle = 90°. Temperature range - 20°C to +100° C.

Bevel gears Made from Zinc Die-Cast, Straight-Tooth System, Ratio 1:1

Material: ZnAl4Cu1.

Shaft angle = 90°.

Bores machined.

Zinc-die-cast gears under load should not be used at operating temperatures higher than 100°C.

The bevel gears only run as a pair at same module.

Bevel gears Made from Steel, Straight-Tooth System, Ratio 1:1

Material: up to module 2: 11SMnPb30.
from module 2.5: C45.

Tooth quality 8 modelled on DIN 3967 (from module 2).
Up to module 5 with crowned, milled teeth.
From module 6 with planed teeth. Not hardened – not lapped.
Shaft angle = 90°.

The bevel gears only run as a pair at the stated ratio and at the same module.

Ordering Details: e.g.:

Bevel Gears Made from Steel, Straight-Tooth System, Ratio 2.5:1 and 3:1

Material: up to module 2: 11SMnPb30.
from module 2.5: C45.

Tooth quality 8 modelled on DIN 3967 (from module 2).
Up to module 5 with crowned, milled teeth.
From module 6 with planed teeth. Not hardened – not lapped.
Shaft angle = 90°.

The bevel gears only run as a pair at the stated ratio and at the same module.

Ordering Details: e.g.:

Bevel Gears Made from Steel, Spiral Tooth System, Ratio 1:1

Material up to module 1.5: 42CrMo4, with cyclo-palloid spiral tooth system, teeth induction hardened.

Material from module 2.0: 16MnCr5, with palloid spiral tooth system, teeth case hardened.

Hubs and bores soft.

Products marked with * are not hardened.**

Tooth quality 8 modelled on DIN 3967.

Sold in pairs only.

** Gears with ground hub contact surfaces and bores.

*** Not hardened.

Description of spiral toothed bevel gears

Distinctive features of bevel gears with spiral tooth system (spiral bevel gears):

Klingelnberg Cyclo-Palloid Tooth System: These gears are produced using the continuous generating method with a two-part cutter head. The tooth curvature follows the path of an extended epicycloid.

Klingelnberg Palloid Tooth System: These gears are produced using the continuous indexing method with a cone shaped gear hob. The tooth curvature follows the path of an extended involute.

Gleason-Circarc Gearing: These gears are produced using the continuous indexing method with a disk-shaped cutting head. The tooth curvature follows the path of a circular arc.

Cyclo-Palloid-, Palloid- and Gleason Tooth Systems are not interchangeable.

Available from stock: Cyclo-Palloid Tooth System Mod. 0.6 up to 1.5. Palloid Tooth System Mod. 2.0 up to 3.5. Gleason Tooth System not in stock, supplied on demand.

The spiral tooth system offers very quiet running as there are always several teeth in mesh. Without load, the contact profile zone should be in the middle of the tooth, lengthwise. Under load the contact profile zone evenly expands towards the inside and outside diameter. The ground contact surfaces of the hubs and bores guarantee an exact adjustment of the assembly dimension E.

Sense of rotation:

If the transmission ratio is not 1:1, the rotational direction marked on the drawing above should be preferred (more favourable direction of the axial forces).

Reworking within 24h-service possible. Custom made parts on request.

Bevel Gears Made from Steel, Spiral Tooth System, Ratio 1.214:1 to 1.615:1

Material up to module 1.5: 42CrMo4, with cyclo-palloid spiral tooth system, teeth induction hardened.

Material from module 2.0: 16MnCr5, with palloid spiral tooth system, teeth case hardened.

Hubs and bores soft.

Tooth quality 8 modelled on DIN 3967.

Sold in pairs only.

Custom made parts
on request.**

Bevel Gears Made from Steel, Spiral Tooth System, Ratio 3:1 and 4:1

Material up to module 1.5: 42CrMo4, with cyclo-palloid spiral tooth system, teeth induction hardened.

Material from module 2.0: 16MnCr5, with palloid spiral tooth system, teeth case hardened.

Hubs and bores soft.

Tooth quality 8 modelled on DIN 3967.

Sold in pairs only.

Ordering Details: e.g.:

Mounting Options for Drive Wheels

There are several possibilities for mounting driving wheels (sprockets, V-Belt Pulleys, pulleys, spur gears etc.) or hubs on shafts. Most wheels are stocked with a rather small bore to allow for further machining. Machining works as drilling out, keywaying a.s.o. can be done at extra charge.

Please note: for several shaft diameters a number of sprockets, V-belt pulleys, spur gears and worm-gear sets are in stock "ready-to-install", i.e. with custom bore and keyway or prepared for Taper clamping bushes.

Fixing Pins

A hole is drilled through hub and shaft and both parts are then connected with a fixing pin. Usually only one side of the hub is pre-drilled, then the wheel is pushed onto the shaft and the hole is drilled through both shaft and the other side of the hub. Then the pin is driven in. This mounting method is suitable for low torques.

Feather Key Connection

Shaft and hub both receive a keyway, a key is pushed into the keyway of the hub. The wheel is pushed onto the shaft and secured against axial movement (with a set screw or with a stepped shaft and axial screw and washer at the end of the shaft). The most common kind of keyway is DIN 6885/1. Key connections are suitable for medium torques. Keys DIN 6885 see page 578. Boxes with an assortment of keys DIN 6885 see page 577.

Clamping Sets, Clamping Bushes and Shrink Disks

Clamping sets and thin-walled clamping bushes are available for various diameters. They allow fast and easy mounting on round shafts. A keyway is not required. Shrink disks are special clamping sets which press a thin-walled hub onto a shaft. Clamping connections are suitable for rather high torques.

Clamping sets and bushes, and shrink disks see page 330.

Taper Clamping Bushes

These customary conical bushes are used for easy and fast mounting of driving elements in Taper version. They can be used with and without key.

The bushes are available with various outer dimensions. For every outside measure there are bushes with many different bores available. This mounting method is cost-efficient and fast, and suitable for rather high torques. A large selection of cost-efficient driving elements in Taper version are available ex stock.

Taper clamping bushes see page 360.

Welding hubs for taper bushes see page 362.

Taper sprockets see page 74, 92, 101.

Taper V-belt pulleys see page 183.

Taper pulleys see page 154.

Taper couplings see page 388.

Worms and Worm Gears, General Basics and Overview

General descriptions:

- For right angled power transmission with simultaneous vertical offset (centre distance of the crossed axles).
- The movement usually takes place via the worm (the movement can be made via the gear wheel if necessary in the case of low transmissions up to 3:1).
- The selection/dimensioning is made as function of the torque (required torque on the worm gears).
- High transmissions up to approx. 100:1 are possible in just one stage.
- Several transmissions and centre distances on stock.
- Silent and low vibration.
- Power loss is greater than in spur and bevel gears, depending on the efficiency of transmission.
- Power loss is converted to frictional heat.
- Low transmission = higher efficiency and lower self-locking.
- High transmission = low efficiency and high self-locking.

Standard Worm Gears and Worm shafts page 286 - 293

For simple applications, e.g. manual operation or occasional motorised operation. Continuous operation is possible at medium torques. Reworking (custom bore, feather keyway, fixed thread) is an optional extra.

Single thread: For high to medium transmissions.

Double thread: For medium to low transmissions.

Sorted by number of threads and module. The gear wheels can be combined with worms having the same module and the same number of threads to make different transmissions. This results in the different centre distances.

<u>Single thread, right hand</u>		<u>Page</u>
Module 0.5 to 2.0	Worm Gears	286
	Worms	287
Module 3.0 to 5.0	Worm Gears	288
	Worms	289

<u>Double thread, right hand</u>		<u>Page</u>
Module 0.5 to 2.0	Worm Gears	290
	Worms	291
Module 3.0 to 4.0	Worm Gears	292
	Worms	293

Precision worm gear sets page 295 - 304

Ideal for continuous operation at high speeds and torques. Mostly ready-to install without needing reworking. Hence they are also economical for simple applications.

Sorted by centre distance. The gear wheels can only be used with worms having the same centre distance and the same transmission. Several transmissions are available per centre distance.

<u>Centre distance</u>	<u>Page</u>	<u>Centre distance</u>	<u>Page</u>
17 mm	295	50 mm	300
22,62 mm	296	53 mm	300
25 mm	296	63 mm	301
31 mm	297	65 mm	301
33 mm	298	80 mm	302

40 mm	299	125 mm	304

Gear Set, Right Hand

The catalogue parts are right handed.

Left hand sets have to be custom made on request.

Recommendation regarding the Lubrication

<u>Peripheral Speed</u>	<u>Lubrication</u>	<u>Lubricant</u>
up to 1 m/s (gear submerged)	Dip-Feed Lubrication	Grease
up to 4 m/s (gear submerged)	Dip-Feed Lubrication	Oil
over 4 m/s (gear submerged)	Spray lubrication	Oil
up to 4 m/s (worm submerged)	Dip-Feed Lubrication	Grease
up to 10 m/s (worm submerged)	Dip-Feed Lubrication	Oil
over 10 m/s (worm submerged)	Spray lubrication	Oil

Worms and Worm Gears, General Basics

Efficiency and self-locking

The calculated efficiency depends on the friction conditions in the contact zone and where the bearings and seal are mounted. These conditions may vary depending on the environmental conditions or lubrication. This leads to a large array, where no exact statement regarding the self-locking capacity can be made. This array is marked with "limited".

A calculated self-locking capacity can be negatively influenced by various factors. For this reason we cannot grant any guarantee regarding the self-locking capacity.

Maximum Torque

The torque values are to be taken as Maximum Values that should under no circumstances be exceeded! Depending on the power of the gear unit, the prevailing temperature and lubrication conditions in the worm gear unit (depending on the cooling, lubricant, mounting etc.) operating set ups with increasing wear may occur - having a negative influence on the wear lifespan of the unit - although the permissible torques were not exceeded. In order to go to the upper limit of the maximum torques, the whole construction must have a rigid design (housing, bearing, bearing distance), to avoid negative influences due to deformation.

The stated torques were calculated presuming an alternating load. They are output torques (of the worm gear, not the worm shaft).

Torque Conversion

Output torque = Input Torque x Efficiency x Transmission

$$\text{Input torque} = \frac{\text{Output torque}}{\text{Efficiency} \times \text{Ratio}}$$

Worm dimensions

to be calculated	given unit	formula
Reference Circle Pitch = t_s	Lead and Number of Gears	$\frac{H}{z}$
Standard pitch = t_{n0}	Pitch and Lead Angle	$t_s \cdot \cos \gamma_m$
Real module = m_s	Reference Circle Pitch	$\frac{t_s}{\pi}$
Standard module = m_n	Standard pitch	$\frac{t_n}{\pi}$
med. lead angle = γ_m	Lead and Pitch \emptyset	$t_{an} \gamma_m = \frac{H}{d \cdot \pi}$
Pitch \emptyset = d	Lead and Lead Angle	$\frac{H}{\pi \cdot t_{an} \gamma_m}$
Tip \emptyset = d_a	Pitch \emptyset and Standard Module	$d + 2m_n$
Lead = H	Number of Gears and Real Module	$z \cdot m_s \cdot \pi$

Worm Gear - Dimensions and Torque

to be calculated	given unit	formula
Pitch \emptyset = d		$z \cdot m_s$
Tip \emptyset = d_a in Median Plane of Gear		$\approx d + 2 m_s$
Output torque = M_d in Nm		$9550 \cdot \frac{P_2}{n_2}$

Material quality:
Information about the material quality can be found at each worm and worm gear.

Note Regarding the Torque-Values Stated in the Catalogue page 286 bis 293

The worm gear sets are calculated in accordance with DIN 3976 or Niemann/Winter (Niemann/Winter "Maschinenelemente Band III, 2. Auflage, Nachdruck 1986", Machine Components Volume III, 2nd Edition, Reprint 1986, Publisher: Springer-Verlag). The decisive strength criterion for small modules is the pitting resistance of the worm gear flanks and for larger modules usually the tooth-root strength of the worm gear.

Calcul. Factor/Determining Factor	Value	Note
Tooth root safety S_F	min. 2.0	-
Flank safety S_H	min. 1.3	Endurance strength 10,000 h
Application factor K_A	1.25	Industrial gear mechanisms, uniform, light shocks

The following permissible Hertzian stress was assumed for the materials used:

Material	permissible flank pressure s_{Hlim} in N/mm ²	Maximum Limit Stress before Tooth Fracture U_{lim} in N/mm ²
G-CuSn12	265	115
GG25	350	150

The load bearing capacity of a worm gear depends on various different factors. The stated torques are only reference values, serving to facilitate the selection process. If necessary a specific calculation of strength and load bearing capacity must be carried out for each application.

Depending on the operating conditions, the wear lifespan may be influenced by grease/oil lubrication. Please also note that insufficient lubrication may lead to scuffing of the gear flanks.

IMPORTANT: The torque values stated refer to the permissible output torques (of the worm gear).

Worm Gears Made from Bronze (G-CuSn12) with Hollow Teeth, Single-Thread, Right Hand

Single-thread worm gears to be paired with single-thread worms page 287. If the module (and number of threads) are matching, various ratios at various axle distances can be realized.

With one-sided hub up to Module 1.

With double-sided hub from Module 1.5.

Pressure angle 20°.

Efficiency: Module 0.5: approx. 0.53.
 Module 0.75: approx. 0.58.
 Module 1: approx. 0.53.
 Module 1.5: approx. 0.49.
 Module 2: approx. 0.50.

Self-locking capacity:
 Module 0.5 and 0.75 limited self-locking capacity. Other versions not self-locking.

Worm Gears Made from Bronze (G-CuSn12), with Hollow Teeth, Double-Thread, Right Hand

Worm gears with double thread matching the double-thread worms page 291. If the module (and number of threads) are matching, various ratios at various axle distances can be realized.

With one-sided hub up to Module 1.

With double-sided hub from Module 1.5.

Pressure angle 20°.

Efficiency: Module 0.5: approx. 0.69.
 Module 0.75: approx. 0.73.
 Module 1: approx. 0.69.
 Module 1.5: approx. 0.49/0.65.
 Module 2: approx. 0.66.

Self-locking capacity: Module 0.5 and 0.75 limited self-locking capacity.

Other versions not self-locking.

Note regarding the Precision Worm-Gear Sets page 295 to 302

Worm gears up to a centre distance of 65 mm are made from special brass CuZn40Al2/So, above made from bronze G-CuSn12 Ni.

Worms made from 11SMnPb30, inspected for fissures, case hardened or C45 induction hardened, hardness HV620-700, shafts (if used), bore and flanks ground.

Pressure angle 15° (to reduce the radial force at the worm shaft). Especially designed for use with high torques, ready bored and some with keyway.

IMPORTANT:

Some of the keyways are not in accordance with the DIN. Please take good note of the keywidth stated.

The stated torques are permissible driving torques for the worm gear, permissible at a speed of 2800 min⁻¹ at the worm shaft. The calculations are based on an expected service life of 3,000 h. With lower torques, or a shorter expected service life, the driving torque can be increased. The factor of security against rapture is 3.

The given torques are valid for shock-free drive, 10 starts per hour, operating time up to 40% and sufficient lubrication with mineral low-viscosity grease. Viscous synthetic oil should, however be preferred. The figures for efficiency stated in the table are theoretical values that can be negatively influenced by various factors.

For that reason we do not offer any guarantee regarding the efficiency and the self-locking capacity.

Precision Worm Gear Sets, Flank Clearance at Centre Distance $a = 17 - 100$ mm

Flank-clearance tolerances for worm gears are only valid for gears with a pressure angle of 15°.

Reference Diameter of the Worm Gear d_{m2} mm	Module m_n mm	Clearance at Centre Distance S_{a2}		Tolerance mm	Engagement Backlash S_{e2}		Circumferential Backlash at Pitch \emptyset

	>2,0 - 4,0	0,19	0,25	0,06	0,098	0,129	0,102	0,134	0,112	0,148

γ_o is the lead angle of the worm.

Self-locking capacity

The self-locking capacity is influenced by the lead angle, the surface structure of the flanks, the sliding speed, the lubricant and the heating. Dynamic and static self-locking capacity must be distinguished.

Dynamic self-locking capacity: up to 3° lead angle lubricated with grease; up to 2.5° lead angle lubricated with synthetic oils.

Static self-locking capacity: from 3° up to 5° lead angle lubricated with grease; from 2.5° up to 4.5° lead angle lubricated with synthetic oils.

With lead angles of 4.5° or 5° there is no self-locking capacity.

Shocks or vibration can override the self-locking capacity. Apart from that, various factors in connection with lubrication, gliding speed and load can create such favourable operating conditions that the self-locking capacity is negatively influenced.

For this reason we cannot grant any guarantee regarding the self-locking capacity.

Worm gear: special brass CuZn40Al2/So.
Worm: 11SMnPb30, inspected for fissures, case hardened HV620-700, ground.
Can be built into gear systems, no reworking required, thus short assembly times.

Precision Worm Gear Sets - Right Hand (Worm Gears and Hollow Worms)

Pressure angle 15°.

Material:

Worm gear: special brass CuZn40Al2/So.
Worm: 11SMnPb30, inspected for fissures, case hardened HV620-700, ground.
Can be built into gear systems, no reworking required, thus short assembly times.

Self-locking capacity

The self-locking capacity is influenced by the lead angle, the surface structure of the flanks, the sliding speed, the lubricant and the heating.

For worm gears with centre distance $a=100\text{mm}$ and 125mm :

Up to ratio 39:1 not self-locking.

From ratio 62:1 Static self-locking.

Shocks or vibration can override the self-locking capacity. Apart from that, various factors in connection with lubrication, gliding speed and load can create such favourable operating conditions that the self-locking capacity is negatively influenced.

For this reason we cannot grant any guarantee regarding the self-locking capacity.

Precision Worm Gear Sets - Right Hand (Worm Gears and Worm Shafts)

Pressure angle: 20°.

Material: Worm gears with cast iron hub made from grey cast iron GG20 and toothed ring made from special worm-gear bronze (G-CuSn12Ni).

Worm shafts made from Steel C45 hardened. Shaft ends not tempered. Tooth flanks ground.

Worm Gears, Centre Distance in Casing $a = 125 \text{ mm} \pm 0.03$

Ordering Details: e.g.: Product No. 332 214 01, Pr.-Worm Gear, $a = 125$, $i = 14.5$

Product No.	Trans- mission	Module	Number of teeth	d_A mm	d_0 mm	D_1 mm	b mm	Md_2 at 1500min^{-1} Nm	η^*	Weight kg

* The figures stated for the efficiency are only reference values, since - besides the lead angle - mounting, lubrication, speed and assembly also have an influence on the efficiency.

Self-locking capacity

The self-locking capacity is influenced by the lead angle, the surface structure of the flanks, the sliding speed, the lubricant and the heating.

For worm gears with centre distance $a=100\text{mm}$ and 125mm :

Up to ratio 39:1 not self-locking.

From ratio 62:1 Static self-locking.

Shocks or vibration can override the self-locking capacity. Apart from that, various factors in connection with lubrication, gliding speed and load can create such favourable operating conditions that the self-locking capacity is negatively influenced.

For this reason we cannot grant any guarantee regarding the self-locking capacity.

Trapezoidal Thread Spindles and Nuts DIN 103 – Description

General description

Trapezoidal threads are ideal for movement due to their flank profile. Application: Conversion of a rotary movement into a linear one. Sometimes: Conversion of a linear movement into a rotary one. Trapezoidal threads can also be used as easy-to-loosen fastener.

Thread profile of the catalogue products

Metric DIN-ISO thread according to DIN 103, with 15° flank angle.

Designation of a Trapezoidal thread spindle DIN 103

DIN-number, abbreviation for trapezoidal thread, outside diameter x lead x length

For example: Spindle DIN 103 Tr. 12 x 3 x 1000mm.

Production method

Practically all of the spindles in the catalogue models are rolled. Thread rolling is the most economical production method for series production. Due to the chipless shaping, rolled threaded spindles feature a number of positive characteristics: Higher tensile strength, higher resistance to wear, higher fatigue strength under reversed bending, burnished thread flanks, precise profile, unsevered grain structure and higher resistance to corrosion. During thread rolling a groove forms at the outside diameter. This groove guarantees accuracy and cylindricity of the thread. It has no influence on the functioning of the threaded spindle, as the thread bears its load at the flanks. The threads of the nuts are cut.

Catalogue Spindles page 310 - 312

Single thread right and left	Steel C15		Tr. 10 x 3 to Tr. 70 x 10	Page 310
	Stainless 1.4305		Tr. 10 x 3 to Tr. 50 x 8	Page 311
Double thread, right hand	Steel C15		Tr. 12 x 6P3 to Tr. 40 x 14P7	Page 312
	Stainless 1.4305		Tr. 12 x 6P3 to Tr. 40 x 14P7	Page 312

Stock lengths: 1000mm, 1500mm, 2000mm, 3000mm.

Other lengths and materials as well as customised models on request.

Stock Spindles page 313 - 315

- **Round nuts or hexagon nuts made from steel C35Pb and stainless steel 1.4305.**
For clamping, manual adjustment and as a fastening nut. Not suitable for drive systems.
- **Round nuts or round flange nuts made from red brass Rg 7.**
For drive systems at low and medium speed and operating times under 20%. Good dry running properties in situations with insufficient lubrication. In combination with a stainless spindle the drive becomes corrosion resistant.
- **Round flange nuts made from cast iron GG25.**
As for round flange nut made from red brass but only limited dry-running capabilities and not corrosion proof.
- **Round nuts made from plastic PA6.6 with MoS2.**
For low-noise drive systems. Maximum permissible peripheral speed $V_{max.} = 0.5$ m/sec. at low load. Good dry-running properties.

Spindle and nut components are manufactured in accordance with DIN 103. Zero backlash (adjustable) can only be achieved with a two-part nut or two counteracting nuts. Spindles and spindle nuts available from drawing on request.

Required Driving Torque for a Threaded Spindle Drive

The required output torque at the spindle can be derived from the axial load, the lead of the spindle and the efficiency of threaded spindle drive and mounting. At short acceleration times and high speeds, the acceleration torque, and with sliding guide the breakaway torque also have to be considered.

Calculation method:

- 1) Determining the lead angle using α book of tables or DIN sheet or through calculation.
- 2) Determining the friction coefficient μ using a table.
- 3) Calculating the effective angle of friction ρ' .
- 4) Calculating the degree of efficiency η .
- 5) Calculating the torque M_d .

Important: About 10% should be added to the end result to make up for losses due to bearing situation. Additional friction due to linear guides and possible rotational forces have to be considered by adding a respective allowance. This can also be done when calculating the input power.

Calculation:

- 1) Lead angle α calculated from:

$$\tan \alpha = \frac{P}{d_2 \cdot \pi}$$

- 2) Selecting the friction coefficient μ from the table.

See table page 295 bottom.

- 3) Calculating the effective angle of friction ρ' from:

$$\tan \rho' \approx \mu \cdot 1,07$$

- 4) Calculating the efficiency degree η :

$$\eta = \frac{\tan \alpha}{\tan (\alpha + \rho')}$$

- 5) Calculating the torque M_d in Nm:

$$M_d = \frac{F \cdot P}{2000 \cdot \pi \cdot \eta}$$

Torque due to an axial load

Due to their degree of efficiency, many spindle drives with trapezoidal thread are not self-locking, i. e. an applied axial load causes a spindle torque. In this case the efficiency is lower than with a conversion of rotary into linear motion.

Calculation method: as with the conversion of rotary into linear motion, but with M_d' and η' .

Calculating the efficiency degree η' :

$$\eta' = \frac{\tan (\alpha - \rho')}{\tan \alpha}$$

Calculating the torque M_d' in Nm:

$$M_d' = \frac{F \cdot P \cdot \eta'}{2000 \cdot \pi}$$

Legend

α	(alpha) is the lead angle of the thread.	d_2	is the medium effective diameter.
η	(eta) is the degree of efficiency regarding the conversion of rotary into linear motion.	F	is the overall axial load in N.
η'	is the degree of efficiency regarding the conversion of linear into rotary motion.	M_d	is the driving torque at the spindle end in Nm.
μ	(mü) is the friction coefficient.	M_d'	is the torque generated by the axial load in Nm.
π	(pi) is ≈ 3.14 .	n	is the speed in min^{-1} .
		P	is the spindle lead in mm.
		ρ'	is the effective angle of friction.

Required Driving Power of a Spindle Drive

The power (in kW) can be derived from the driving torque M_d and the spindle speed n (in min^{-1}):

Important: In order to allow for losses caused by the bearing and other frictional losses and the power required for rotary acceleration, the power selected for the drive should be 60 to 100% above the calculated figure.

Self-locking Capacity of Trapezoidal Spindle Drives

The self-locking capacity is linked to the friction coefficient (determined by the material match spindle/nut, surface quality, lubrication) and to the lead angle. If the lead angle is smaller than the angle of friction, the spindle drive is self-locking.

We need to distinguish between static and dynamic self-locking capacity. With static self-locking capacity a motionless nut remains steadfast, as long as it is not set in motion by other influences.

With dynamic self-locking capacity a moving nut comes to a stop, when it is no longer driven.

In theory all listed single-thread spindle drives - except for plastic nuts - are self locking, as the lead angle is smaller than

the angle of friction. A small vibration may, however be enough to set the nut moving. The only dynamic self-locking drive is size 70 x 10, as only here the lead angle is small enough (friction coefficient $0.05 = 2.86^\circ$).

Attention: the above statements are only valid under the assumption that the friction coefficients listed in the catalogue are really fitting. In practice surface properties and the type of lubrication and lubricant used may cause derivation from the original value. To be on the safe side, a locking device (clamping device) should be fitted. In connection with plastic nuts, **none** of the spindle drives listed are self-

locking.

Due to their large lead, double-threaded spindle drives are generally not self-locking.

Critical Speed of Trapezoidal-Thread Spindles

With thin, fast running spindles there is a danger that resonant bending vibration occurs. The method described below helps to determine the resonant frequency provided a rigid enough installation. Speeds close to the critical speed also immensely increase the risk of lateral buckling - the critical speed must therefore always be considered when calculating the critical buckling length. (see following chapter "critical buckling force")

$$n_{perm.} = n_{kr} \cdot f_{kr} \cdot c_{kr}$$

$n_{perm.}$ is the fastest permissible spindle speed in min^{-1} .

n_{kr} is the critical spindle speed in min^{-1} - corresponds to the natural bending vibrations of the spindle and leads to resonance occurrences.

f_{kr} is a corrective factor, considering the spindle bearing. Precondition is a rigid enough installation of the spindle and a fixed bearing.

The following drawing shows 4 classic installation methods of f_{kr} for standard spindle bearings:

c_{kr} is a corrective factor, considering the influence of the critical buckling force. We would advise to first determine $n_{kr} \cdot f_{kr}$ and to then to equate $n_{perm.}$ with the actual speed n . This then leads to c_{kr} for $n/(n_{kr} \cdot f_{kr})$, and with these figures the diagramme then renders c_k (c_{kr}) the related maximum axial pressure load.

Critical Buckling Force of Trapezoidal-Threaded Spindles

With thin spindles under pressure load there is a risk that lateral buckling occurs. Before the permissible pressure load is determined, the safety factors of the mechanism have to be considered .

$$F_{zul.} = F_k \cdot f_k \cdot c_k$$

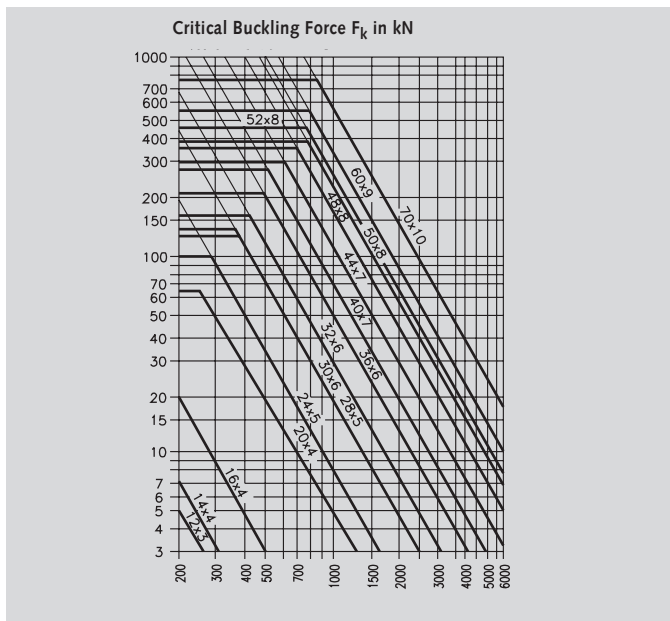

$F_{perm.}$ is the strongest permissible axial force (pressure load) on the spindle in kN.

F_k is the critical buckling force in kN in connection with the free length L .

f_k is a corrective factor, considering the spindle bearing. Precondition is a rigid enough installation of the spindle and a fixed bearing. The following table shows classic installation methods of f_k for standard spindle ends.

c_k is a corrective factor, considering the influence of the critical speed.

Basis for the Calculation of Trapezoidal-Threaded Spindles

Load Capacity

The load capacity for slide pairings usually depends on the material used, the surface properties, intake condition, lubrication conditions and gliding speed, on the temperature and thus on the duty cycle and possibilities for heat dissipation as well as the type of load (constant, fluctuating, alternating, shocks...).

The diagrammes below allow an assessment of the permissible axial load in connection with the speed of trapezoidal-threaded nuts on rolled trapezoidal-threaded spindles at normal operating conditions.

Load table for nuts made from steel C35 see page 309.

Regarding the Operating Times

Especially single-thread, trapezoidal-threaded spindle drives, due to their low degree of efficiency, convert most of the input power of the shaft into heat, which is first absorbed by spindle and then has to be dissipated. At low power and short operating times the natural dissipation and radiation of heat is usually sufficient. With continuous operation quite substantial cooling capacities might be required. As a thermodynamic calculation of these difficulties is usually to complex or even impossible, already existing comparative calculations are often the only source of information.

Round nuts made from red brass Rg7

Round nuts made from plastic

Round flange nuts made from cast iron GG25

Round flange nuts made from red brass Rg7

Approx. 80% of the axial force in kN are permissible for double-threaded nuts .

Load Table for Single-Thread Steel Nuts in kN Static (without Safety Margin)

Maximum static load capacity in kN for single-thread, trapezoidal-threaded nuts made from steel C35 at a surface pressure of 25 N/mm².

The figures do not include any safety margin. Depending on the application a safety of 1.5 to 6 might be required (this means the figures in the table have to be divided by 1.5 to 6).

In addition the spindle has to be checked for buckling. The decisive factor in this calculation is the free spindle length and the bearing of the spindle, see page 307.

With dynamic load, the surface pressure must be no larger than 10 N/mm².

With double-threaded nuts about 80% of the axial load in kN is permissible.

Trapezoidal Thread Ø x Lead mm	Length at h= 1.5 x d mm	Load Capacity at h= 1.5 x d kN	Length at h= 2 x d mm	Load Capacity at h= 2 x d kN

PA6.6 with MoS2, a Special Polyamide, Suitable for Nuts with Trapezoidal Thread

Material Properties

This plastic is a low-maintenance material for bearings. Compared to other plastics it has a much higher wear resistance. The spec. surface pressure is 35 N/mm² at 23°C/ 50% RH. Threaded nuts made from plastic are more resistant against loads caused by impacts or shocks than red brass and grey cast iron-nuts. The material is also quieter than red brass and grey cast iron and increases the service life.

Properties	Unit of Measurement	Plastic PA6.6 with MoS2
Tensile Strength	N/mm ²	90 (82)
Elongation at Break	%	20 (70)
Flexural Modus	N/mm ²	3600 (1500)
Compressive Strength		
at 1% Deformation	N/mm ²	37
Izod Impact, Notched	kJ/m ²	3.35 (>10)
Shore Hardness D	D	80 - 90
Coefficient of Linear		
Thermal Expansion	10 ⁻⁶ /°C	63
Thermal Conductivity	W/mk	0.21
Thermal Compr. Strength	0.46 N/mm ² °C	204 - 254
Melting Point	°C	260
Resistivity	Ω cm	>10 ¹³ (10 ¹²)
Dielectric Constant	-	3.6 (5.1)
Dissipation Factor	-	0.03 (0.2)
Water Absorption 24 hours	%	0.5 - 1.3
Water Absorption max.	%	6 - 8

Figures are valid for a water content below 0.2%, Figures in () at standard climate 23°C/50% RH. Chemically resistant against all solutions, lubricants, hydrocarbons, ketones, aqueous solutions and alkaline solutions pH5-pH11. Chemically unstable against phenols, cresols, formic acid, concentrated mineral acids and alkali, oxidisers including halogens.

Wear Properties

Common constructions (threaded spindle made from steel, nut made from grey cast iron or bronze) lead to wear of the threaded spindle and the nut. A threaded nut made from plastic does not affect the spindle, i.e. if unexpected wear occurs, only the nut has to be changed. In the pairing steel/plastic there is generally no hardening of the spindle required.

Fixing Plastic Nuts

The plastic nut can be pressed into the housing with a slight over-size of 0.1 - 0.2 mm. It can be secured against turning and displacement with any of the common locking elements used in machine building, or with a flange attached to the face side.

Attention: The over-size used for pressing the nut in passes on 1 : 1 to the inner diameter which reduces the clearance.

Note

For systems with relatively high loads or extreme operating conditions we would advise you to contact us.

Maintenance

The nuts only need to be lubricated on the first mounting, after that they are maintenance free. In order to prolong the service life of the nuts, they can be relubricated, if required. Any fat not containing molybdenum sulphide (Molykote) can be used.

Tolerances

Other than for the rest of the trapezoidal-threaded nuts, the flank clearance is kept at the upper tolerance limit, as the plastic expands when heating up.

Comparison of Friction Coefficients

Spindle / Nut	Static		Dynamic		Dry-Running Characteristics
	Dry	Oil Lubricated	Dry	Oil Lubricated	
Steel / Steel	0.33	0.10	0.15	0.05	none
Steel / Cast iron	0.20	0.10	0.10	0.05	limited

Rolled Spindles

High grade raw material C15, heat treated by the manufacturer and without exception delivered by German smelting works, and a complex machine and tool technology lead to our excellent quality in the spindle production.

The strong densification causes frictional heat which has to be dissipated using a re-cooling or filtering system. If the compressed oil is changed continuously, press-polished flanks without any leaf-shaped marks can be achieved.

To master the rolling process, in order to achieve exact leads and profiles up to ± 0.03 mm/300 mm (standard $\pm 0.15/300$, material 1.4305 $\pm 0.3/300$) and high surface quality, has only become possible by means of complex measuring and controlling systems in combination with a new generation of machines with swiveling toolholders.

Straightness:

Trapezoid 10 - 24 mm max. 0.8 mm/m,

Trapezoid 28 - 70 mm max. 1.2 mm/m

Straightness on request:

Up to size Tr. 16: 0.10 mm/m.

From size Tr. 20: 0.05 mm/m.

* Lead angle is not in accordance with DIN 103.

**Reworking within
24h-service possible.
Custom made parts
on request.**

Metric ISO-Trapezoidal-Threaded Spindles DIN 103, Stainless, Single-Thread, Right and Left Hand

Material: Stainless steel 1.4305.

Tolerance zone 7e. Version: up to Tr 40x7 rolled, above this size whirled.

Nuts with trapezoidal thread made from plastic, Steel, Stainless steel, grey cast iron and red brass page 313.

Ball Screw Drives, Right Hand, Rolled Version

General Description

Because of the rolling friction, ball screw drives have a high efficiency up to 98% and require a relatively low drive power. Application: Conversion of a rotary movement into a linear one. Sometimes: Conversion of a linear movement into a rotary one (recommended only at high pitch, beginning from 1/3 of the nominal diameter).

No Self-Locking

Due to the low friction with high efficiency, ball screw drives require only a very low starting torque and are not self-locking.

Designation according to DIN

According to DIN ISO 3408-1 and other standards, a ball screw drive consists of a spindle and, for minimum, one nut. The size has to be described by the nominal diameter and the pitch. Another essential dimension is the ball diameter. Further information is required: The version (shape) of the nut, the pitch accuracy, the length and, if needed, the details of the spindle ends.

Conditions of Use and Lifespan

Ball screw drives are sensitive to dirt and high shock loads. Sufficiently protected, they reach a very long lifetime.

Catalog Spindles and Nuts

Catalog Version

Available from stock: Spindles right hand, rolled version in sizes from 8x2 to 63x10mm. Flanged nuts and cylindrical nuts. The production lengths are from 1,000mm up to 3,000mm, depending on the size. Partial lengths are also in the stock range. Other lengths and reworking of the spindle ends on request.

Rolled Spindles

Rolled from high quality bearing steel 100Cr6, hardened and straightened. Rolled spindles have a unsevered grain structure and high pitch accuracy. Rolling is the most economical method for serial production. The catalog spindles can get combined with the flanged nuts and cylindrical nuts on the following pages.

Axial Clearance

These ball screw drives are not backlash-free. Therefore the nuts run very easy with very low friction. The axial clearances are shown in the tables of the nuts. This play is only a disadvantage if a high positioning accuracy is required at alternating direction of force. To eliminate the axial play, two nuts can get braced against each other. Alternatively, the nuts could be equipped with better fitting ball sizes. This would be expensive.

Load Capacity

The static and dynamic load rates are shown in the tables of the nuts. These loads only apply to the use with axial play. At backlash-free preloaded nuts the load must be reduced, or the lifespan will get shorter. Additional to the axial load, the acceleration force and shock loads must be considered. Also the critical buckling force and critical spindle speed must be checked.

Maximum Speed

Ball screw drives allow very high speeds. But for sufficient lifespan, the speed should not exceed $3,000\text{min}^{-1}$ for longer time. And the length-dependent, critical spindle speed must be considered.

Buckling Force and Critical Spindle Speed

At thin spindles under pressure load, there is a risk of buckling. At high speed, there is an additionally risk of resonant vibrations. For both, the calculation can be done like shown on page 307 for trapezoidal spindles.

Lubrication

Running without lubricant is not allowed. For grease lubrication, normal roller bearing grease is recommended. The lubricant consumption depends on the condition of use. Often a lubrication period of 200 hours is sufficient.

Bearing Units for Spindles Page 322

These ready-to-install bearing units for trapezoidal and ball-screw spindle drives are available from stock. The unit for the fixed side has two angular contact ball bearings, lightly preloaded, to withstand high axial and radial forces. The unit for the support side has a standard ball bearing to hold the spindle end in its position.

Shaft End Reworking for Spindles Page 325

The matching spindle reworking can be done by the customer or, at short time, by **MÄDLER**®. The spindle reworking shown on page 325 is just a recommendation. For shaft processing, soft annealing (tempering) of the hardened spindle ends is necessary.

Ball Screw Spindles, Right Hand, Rolled

Material: Bearing steel 100Cr6, No. 1.3505, rolled.
Tensile strength 1570 N/mm², Brinell hardness 207 HB.

- Rolled ball screw spindle.
 - To be combined with **MÄDLER**® flanged ball screw nuts and cylindrical ball screw nuts.
 - Pitch accuracy 52 µm/300 mm (T7).
 - Straightness 0,1 mm/m.
 - Special lengths and spindle end reworking against extra charge.
- Temperature range: -20°C to +80°C (for short time to +110°C).

Bearing Units for Spindles Page 322

These ready-to-install bearing units for trapezoidal and ball-screw spindle drives are available from stock. The unit for the fixed side has two angular contact ball bearings, lightly preloaded, to withstand high axial and radial forces. The unit for the support side has a standard ball bearing to hold the spindle end in its position.

Shaft End Reworking for Spindles Page 325

The matching spindle reworking can be done by the customer or, at short time, by **MÄDLER**®. The spindle reworking shown on page 325 is just a recommendation. For shaft processing, soft annealing (tempering) of the hardened spindle ends is necessary.

Ball Screw Drives - Flanged Ball Screw Nuts

Material: Bearing steel 100Cr6, No. 1.3505,

To be combined with **MÄDLER**® ball screw spindles.

With axial clearance, for running with low friction.

Temperature range: -20°C to +80°C (for short time to +110°C).

Ordering Details: e.g.: Product No. 640 100 25, Flanged Ball Screw Nut 10x2mm

Miniature Ballscrew Drives (on request)

These ballscrew drives with hardened and ground spindle are made to the customer's specifications. They can be optionally equipped with single nut, long nut with screw-in thread or with flange nut. (all hardened). The drawing below only serves as an example and shows the smallest size of each type. The other drawings can be sent if required. The lengths L_1 , L_2 and L_3 can be altered. Price and delivery times on request.

Necessary specifications for your request:

Size, lead, thread length L_1 (if requires also L_2 and L_3). Version of the nut, version low axial backlash or zero axial backlash, amount.

* Ball nuts without wiper.

** Ball nuts with wiper made from plastic PA6.

*** For this lead we can only supply single nuts or flange nuts (no screw-in thread available).

**** When ordering please state whether low backlash or zero backlash is required.

Miniature Ballscrew Drives, Standard Versions of Nuts

Materials:

Spindle: Cf53, induction hardened.

Nut: 100Cr6, hardened.

Other models available on request.

with cylindrical nut

with screw-in thread

with flange nut

Example Drawing showing size Ø 6 with with cylindrical, single nut.

Pillow Block Bearing Units BK, for Fixed Side

Material: Housing from steel, all surfaces machined, burnished. On request: nickel plated. Rolling bearing from bearing steel.
Ready-to-install housing bearing unit for trapezoidal and ballscrew spindle drives, for the fixed side. With two angular contact ball bearings, lightly preloaded, with seals. With 8 mounting holes.

Locknut and distance bushes are included. Due to the standard dimensions, these units can also replace parts of other suppliers.
Spindle reworking on request (see page 325).
Matching counterpart for support side: Pillow Block Bearing BF.

Pillow Block Bearing Units BF, for Support Side

Material: Housing from steel, all surfaces machined, burnished. On request: nickel plated. Rolling bearing from bearing steel.
Ready-to-install housing bearing unit for trapezoidal and ballscrew spindle drives, for the support side. With one movable single row deep groove ball bearing with shields (2Z). With 6 mounting holes.

Retaining ring for fixing on the spindle end is included. Due to the standard dimensions, these units can also replace parts of other suppliers.
Spindle reworking on request (see page 325).
Matching counterpart for fixed side: Pillow Block Bearing BK.

Nickel plated on request.

Pillow Block Bearing Units EK, for Fixed Side

Material: Housing from steel, all surfaces machined, burnished. On request: nickel plated. Rolling bearing from bearing steel.
Ready-to-install housing bearing unit for trapezoidal and ballscrew spindle drives, for the fixed side. With two angular contact ball bearings, lightly preloaded, with seals. With 2 mounting holes.

Locknut and distance bushes are included. Due to the standard dimensions, these units can also replace parts of other suppliers.
Spindle reworking on request (see page 325).
Matching counterpart for support side: Pillow Block Bearing EF.

Shaft Reworking and Bearing Load Data for Spindle Bearing Units BK, EK and FK (Fixed Side)

Shaft Reworking:

At **MÄDLER**[®], trapezoidal and ballscrew spindles can get reworked, fitting to the bearing units. The spindle reworking in the drawing is just a recommendation. Due to the customer's request, the length L_5 could be shorter or longer and the shaft end could get a keyway DIN 6885.

Bearing Load Data:

The loading rates and speed limits shown in the table are the limits just for the bearings. The limits of the spindles are much lower, depending on the diameter, length and material.

Recommended Shaft Reworking for Fixed Side Units

Splined Shafts and Splined Hubs DIN ISO 14 – Description

General Description

Splined shafts with splined hubs are used when torques have to be transmitted and the component to be driven needs to be movable in axial direction.

Common Profiles

DIN ISO 14 (used to be DIN 5463): Most common type, with straight, parallel flanks. This is the profile of catalogue goods. Other standards are less commonly used.

Profile Description DIN ISO 14:

Number of splines x small diameter x big diameter. Example for a component with 6 splines and outside diameter 14 mm: splined shaft (KW) or splined hub (KN) 6 x 11 x 14.

Production method:

Cold drawn: Economical production method. Due to the chipless shaping, the shafts have a unsevered grain structure and thus a high strength. This production method is perfectly suited for easy to shape materials as C45, 1.4301 or 42CrMo4.

Milled: for single-unit production, if special dimensional accuracy is required or for high strength materials. With this methods, shafts with diameters (steps) that are larger than the core diameter or outside diameter can be produced.

Splined Shafts in Catalogue Version, Page 328

Profiles

Main dimensions in accordance with DIN ISO 14. Shaft with splines with parallel, straight flanks. Up to size 28 x 34 with six splines, from size 32 x 38 with 8 splines.

Materials

The catalogue splined shafts are optionally available in steel C45 cold drawn or stainless steel 1.4301 cold drawn. Other materials as e.g. 42CrMo4 on request.

Tolerances

Up to size KW 21x25: Straightness 0.8 mm/m, Torsion max. 1.0 mm/m. From size KW 23x28: Straightness 1.2 mm/m, Torsion max. 1.5 mm/m. A straightness of 0.1mm/m can be produced on request.

Lengths

Splined shafts up to a length of 6 metres can be supplied from stock. Standard lengths sold are 1 metre, 1.5 metre, 2 metre and 3 metre. Price for bigger lengths up to 6 metre on request.

Splined Hubs in in Catalogue Version, Page 328

Profile

Main dimensions in accordance with DIN 14. Hub with splines with parallel, straight flanks. Up to size 28 x 34 with six splines, from size 32 x 38 with 8 splines.

Materials

The catalogue splined hubs are optionally available in steel C45, red brass or stainless steel 1.4301. Other materials as e.g. 42CrMo4 on request.

Tolerances

Profile inner diameter: H7. Profile outside diameter: H11. Outer dimensions: according to DIN 2768m.

Lengths

The standard lengths are equivalent to the maximum possible sweeping length. Longer splined hubs are available on request. Provide for at least one centred (or one-sided) relieve groove.

Torque- and Performance Figures of Splined Shafts and Hubs based on the Torsional Stress (with Safety Margin of 2.5)

Splined Shafts - Similar to DIN ISO 14 Cold Drawn C45 and Stainless Steel, Material-No. 1.4301

Lengths in stock: 1000, 1500, 2000 and 3000 mm.
Special lengths up to 6000 mm on request (some in stock).

Tolerances:

Straightness 0.8 mm/m, torsion max. 0.5 mm/m.

A straightness of 0.1 mm/m can be produced on request.

Clamping Sets BAR

Material: 11SMnPb37.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For medium torques.
- Very good distribution of pressure.
- Very good self-centering.
- Self-releasing at dismounting.
- Also suitable for large hub and shaft tolerances.
- Slight axial offset possible during assembly.

Ordering Details: e.g.: Product No. 615 405 00, Clamping Set BAR 5 mm

T = transmittable torque at F_{ax} = 0.
 F_{ax} = transmittable axial force at T = 0.
 P_W = surface pressure onto the shaft.
 P_N = surface pressure onto the hub.
 T_A = fastening torque of the screws.

Fit, Surface

Shaft and hub up to tolerance h8/H8.
 Surface finish for shaft and hub < 12.5µm.

Mounting

The clamping set has to sit inside the bore by at least the measure „L“. Slightly oil the clamping set before mounting, do not use molybdenum disulphide or fat. Tighten the screws evenly and crosswise in several steps.

Demounting

Remove all tensioning screws and screw them into the (usually unused) forcing thread of the front ring, until the ring is released.

Clamping Sets BAR, QPQ-Coated

Material: 11SMnPb37.

- For fixing a hub on a shaft.
- **QPQ coated:** High corrosion resistance, improved fatigue strength, primarily food safe (further information see below).
- For medium torques.
- Self-centering.
- Slight axial offset possible during assembly.

Ordering Details: e.g.: Product No. 615 705 00, Clamping Set BAR QPQ, 5 mm Bore

* Screws with special coating.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_W = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

What is QPQ Nitro Carburising?

QPQ means:

Q = Quench (nitrocarburising followed by oxidising cooling process).

P = Polish (mechanical polishing up to desired surface finish before nitrocarburising).

Q = Quench (Oxidising to increase the corrosion resistance).

Salt-bath nitro carburising using the TENIFER method is, in many cases, a good alternative to other surface layer treatments as case hardening or hard plating. The principle task of the QPQ surface refinement is to protect machine components of all industries against wear and corrosion, but it also meets other functional requirements as, e.g., improving the endurance strength.

Mounting und Hub Calculation

Notes regarding fit, surface structure, mounting, demounting and hub calculation see page 332.

QPQ Surface Properties

Very good corrosion resistance, better than hard chrome or chem. nickel. Corrosion resistance in the salt spray test SS CASS in accordance with DIN 50021.

Layer thickness of 10 - 25 µm possible. For medium operational demands we recommend a layer thickness of approx. 15 µm at a 90 minute treatment.

Only very small changes in dimensions (only 5 µm), as the surface modification is achieved through diffusion and not application.

Surface hardness same as clamping set material ≥ 350 HV.

Improved wear resistance, no fretting corrosion, no cold shut.

Increased endurance strength, sometimes up to 100% higher.

Is completely safe to use with food as long as there is no contact with any acidic substances with a pH-value of ≤ 4.

Clamping Sets BAR, Stainless

Material: Stainless steel 1.4057.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- Stainless Steel.
- For low torques.
- Very good distribution of pressure.
- Very good self-centering.
- Self-releasing at dismounting.
- Also suitable for large hub and shaft tolerances.
- Slight axial offset possible during assembly.

More sizes up to d=1,000mm for 1,980,000Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Due to the cone angle, the clamping set is usually released once all screws have been fully unfastened. There are three large auxiliary threads cut into the front ring, which serve to remove this ring.

Clamping Sets COM-A, Stainless

Material: Stainless steel 1.4057.

- For fixing a hub (e.g. V-belt pulley or similar) on a shaft.
- For low torques.
- Not self-centering.
- Self-releasing at dismounting.
- No axial movement during mounting.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness max. 16µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Due to the cone angle, the clamping set is usually released once all screws have been fully unfastened. There are three large auxiliary threads cut into the front ring, which serve to remove this ring.

Clamping Sets COM-AS

Material: Steel.

- For fixing a hub (e.g. V-belt pulley or similar) on a shaft.
- For medium high torques. Like COM-A, but with slotted rings.
- Not self-centering.
- Self-releasing at dismounting.
- No axial movement during mounting.

Ordering Details: e.g.: Product No. 615 300 19, Clamping Set COM-AS, 19 mm

Price and delivery time on request.

T = transmittable torque at $F_{ax} = 0$.

F_{ax} = transmittable axial force at $T = 0$.

P_W = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.

Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Due to the cone angle, the clamping set is usually released once all screws have been fully unfastened. There are three large auxiliary threads cut into the front ring, which serve to remove this ring.

Clamping Sets COM-B

Material: Steel.

- For fixing a hub (e.g. timing belt pulley or similar) on a shaft.
- For medium torques.
- Also suitable for small hub diameters.
- Self-centering.
- Self-locking.
- No axial movement during mounting.

Ordering Details: e.g.: Product No. 615 606 00, Clamping Set COM-B, 6 mm

More sizes up to d=130mm for 24,800Nm are available.

Price and delivery time on request.

T = transmittable torque at $F_{ax} = 0$.

F_{ax} = transmittable axial force at $T = 0$.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.

Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Remove all tensioning screws and screw them into the (usually unused) forcing thread of the front flange, until the flange is released.

Clamping Sets COM-B, Stainless

Material: Stainless steel 1.4057.

- For fixing a hub (e.g. timing belt pulley or similar) on a shaft.
- For low torques.
- Also suitable for small hub diameters.
- Self-centering.
- Self-locking.
- No axial movement during mounting.

Ordering Details: e.g.: Product No. 615 995 10, Clamping Set COM-B, stainless, 10 mm

More sizes up to d=180mm for 34,600Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness hub/shaft max.
12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use MoS2 or grease.
Tighten the screws evenly and crosswise in several steps to the set torque.

Demounting

Remove all tensioning screws and screw them into the unused forcing threads of the front flange evenly and crosswise in several steps, until the flange is released.

Clamping Sets COM-CB1

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For medium high torques.
- Self-centering.
- Self-locking.
- Axial movement during mounting.

More sizes up to d=180mm for 58,900Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness hub/shaft max.
12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use MoS2 or grease.
Tighten the screws evenly and crosswise in several steps to the set torque.

Demounting

Remove all tensioning screws and screw them into the unused forcing threads of the front tensioning ring, until it is released.

Clamping Sets COM-L

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For very high torques.
- Self-centering.
- Slight axial offset possible during assembly.

Concentricity: 0.02 to 0.04 mm.

Ordering Details: e.g.: Product No. 615 511 25,
Clamping set COM-L, 25 mm

* When using in a stepped bore, the clearance C is to be foreseen for demounting.

More sizes up to d=300mm for 444,000Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_w = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness hub/shaft max.
12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use MoS2 or grease.
Tighten the screws evenly and crosswise in several steps to the set torque.
To ease mounting the outer ring and the rear tensioning ring can be fixed with screws via the forcing thread.

Demounting

Remove all tensioning screws and screw them into the unused forcing threads of the front tensioning ring, until it is released.
Then screw in the screws into the unused forcing threads of the outer ring, until the rear tensioning ring is released.

Clamping Sets COM-LL

More sizes up to d=300mm for 524,000Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_W = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Remove all tensioning screws and screw them into the (usually unused) forcing thread of the front flange, until the flange is released.

Clamping Sets COM-LLH

Material: Steel.

- For fixing a hub (e.g. sprocket or similar) on a shaft.
- For very high torques.
- Very good distribution of pressure.
- High resistant against bending forces.
- Self-centering.
- Self-locking.
- No axial movement during mounting.

Ordering Details: e.g.: Product No. 615 580 42, Clamping Set COM-LLH, 42 mm

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.
F_{ax} = transmittable axial force at T = 0.
P_W = surface pressure onto the shaft.
P_N = surface pressure onto the hub.
T_A = fastening torque of the screws.

Hub Calculation and Selection Tool

on the Internet at www.maedler.de

in the section MÄDLER®-Tools

Fit

Shaft h8, Hub H8.
Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Remove all tensioning screws and screw them into the (usually unused) forcing thread of the front flange, until the flange is released.

Clamping Sets COM-R

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For lower to medium torques.
- Not self-centering.
- Loose clamping rings. For use with customer's pressure sleeves and customer's screws.
- Up to 4 clamping sets can be used in line.
- Versatile usage, for customized solutions.

Ordering Details: e.g.: Product No. 615 000 06, Clamping Set COM-R, 6 mm

More sizes up to d=500mm for 270,000Nm are available.

Price and delivery time on request.

Several sets in line

Several sets can be mounted in line. T and F_A shown in the table are for one set.

At 2 sets: T_{ges.} = T x 1,6.

At 3 sets: T_{ges.} = T x 1,9.

At 4 sets: T_{ges.} = T x 2,1.

Calculation the screws

The screw size can be chosen. The number of screws must be calculated.

Number of screws = F_{A ges.} : F_Σ

F_{A ges.} = Number of sets x F_A

F_A see data table above.

F_Σ see data table on the right.

Axial Screw Force F_Σ and Fastening torque

Screw	Axial Screw Force F _Σ in kN			Fastening Torque T _A in Nm		
	8.8	10.9	12.9	8.8	10.9	12.9
M4	3,9	5,8	6,7	3,0	4,4	5,1
M5	6,4	9,4	11,0	5,9	8,7	10
M6	9,0	12,2	15,5	10	15	18
M8	16,5	24,3	28,4	25	36	43
M10	26,3	38,7	42,2	49	72	84
M12	38,4	56,5	66,0	85	125	145
M14	52,5	77,5	90,5	135	200	235

Fit

Shaft h8, Hub H8.

Surface roughness max. 12.5µm.

T = transmittable torque.

F_{ax} = transmittable axial force.

P_W = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

F_A = required axial preload force.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Remove all tensioning screws. Then, due to the cone angle, the clamping set is usually released. If not, use a wheel puller or use carefully a rubber hammer to loosen the wheel from the clamping rings.

Clamping Bushes E and E-N

Material E: High-quality steel.

Material E-N: Stainless steel 1.405.

The clamping bush consists of a double-walled steel sleeve filled with a pressure medium, and a flange part. Inside the flange there is a screw and a piston with seal to build up compression.

Function: When the thrust screw is tightened, the sleeve expands uniformly against shaft and hub, creating a rigid connection through frictional force. When the thrust screw is loosened, the bush returns to its initial position and can be easily disassembled.

Concentricity: 0.02 mm.

Tolerances: Shaft h7 for $d = 15$ mm.

Shaft k6-h7 for $d = 19, 22, 24, 28$ and 38 mm.

Shaft h8 for the other diameters d .

Hub H7.

Temperature range: -30 °C to 85 °C.

T = transmittable torque at axial force of 0, if the screws are fastened with T_A .
 F_{ax} = transmittable axial force at torque of 0, if the screws are fastened with T_A .

F_r = maximum transmittable radial force.

T_A = required fastening torque for the screws.

* With coated surface.

Properties

The unique hydraulic principle leads to many advantages:

- very fast mounting/demounting with only **one thrust screw**.
- radial fastening of the thrust screw allows space saving installation conditions.
- very small assembly dimensions.
- good concentricity, even after several mountings.

Dimensioning

For the maximum torque, the shaft must be strong enough (min. strength 350 N/mm², for example C45).

The hub diameter must be big enough.

Recommend minimum hub diameter:

Hub from Steel: $ND = 1,4 \times D$.

Hub from grey cast iron: $ND = 2,0 \times D$.

Hub from Aluminium: $ND = 2,5 \times D$.

Mounting

Before mounting always check whether the threads are lubricated (OKS 260 or Molykote D).

Clamping Bushes MSA

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For medium high torques and axial forces.
- Minimal space requirement.
- Self-centering.
- Not self-locking.
- Little axial movement during mounting.

Concentricity: approx. 0.02 mm.

Tolerance: Shaft h11 up to k6, Hub H7 up to H11.

Ordering Details: e.g.: Product No. 615 019 00, Clamping Set MSA, Slotted, 19 mm

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_N = surface pressure onto the hub.

T_A = fastening torque of the screws.

Operating factor f_b for various operating conditions

The values for the maximum transmittable torque and the maximum permissible axial force for the clamping bush at static load are stated in the table below. With dynamic load these values have to be reduced, i.e. divided by the operating factors listed in the adjoining table.

Drive Unit	Type of Load		
	Uniform Load	Moderate Shock	Strong Shock
Electric motors, turbines	1 - 1.25	1.25 - 1.5	1.5 - 1.75
Multi-cylinder piston engines	1.25 - 1.5	1.5 - 1.75	1.75 - 2
One-cylinder piston engines	1.75 - 2	2 - 2.25	2.25 - 3

Description

Mechanical, all-steel clamping elements, containing no hydraulic pressure medium. Both inner part (1) and outer part (2) have a cylindrical buttress thread with a lengthwise slot. The inner ring (3) connected to the inner part has threaded studs (4), that create a tensioning effect when tightened. The bushes are designed for very high loads in radial as well as in axial direction. If a clamping bush without slot on the outside part is to be welded onto a workpiece, we would ask you to contact us first. Feather key grooves in the shaft do not cause any problems; simply remove the frictional corrosion.

Dimensioning

For the maximum torque, the shaft must be strong enough (min. strength 350 N/mm², for example C45).
The hub diameter must be big enough.
Recommend minimum hub diameter:
Hub from Steel: ND = 1,4 x D.
Hub from grey cast iron: ND = 2,0 x D.
Hub from Aluminium: ND = 2,5 x D.

Clamping Bushes MSD

Material: High-quality steel.

The MSD clamping bush consists of a double-walled, hardened steel sleeve filled with a special pressure medium, a seal, a piston, a compression flange and fastening screws. When tightening the screws, the sleeves expand evenly against shaft and hub, creating a rigid connection. When the screws are loosened, the bush returns to its initial position and can be easily demounted.

Temperature range: -30 °C to 85 °C. **Concentricity:** $\approx 0.03 - 0.06$ mm.
Tolerance: Shaft h8 - k6 (for Product No. 615 215 00 only h7),
 Hub H7.

$P_W \approx 90\text{N/mm}^2$ $P_N \approx 70\text{N/mm}^2$

T = transmittable torque at axial force of 0, if the screws are fastened with T_A .
 F_{ax} = transmittable axial force at torque of 0, if the screws are fastened with T_A .
 T_A = required fastening torque for the screws.

The dimensions refer to bushes before assembly.

Mounting

For mounting, the clamping bush MSD is placed between shaft and hub.

After the screws have been tightened, there is a contact between the surface of hub and shaft.

Advantages

The hydraulic principle leads to many advantages:

- fast mounting/demounting.
- sensitive adjustment of the hub can be carried out during assembly.
- low fastening torque and few screws allow very simple assembly.
- good concentricity.
- small dimensions allow little outside diameter of the hub.
- The clamping bushes are as standard equipped with Allen screws, but hexagon-head screws can also be supplied.

Dimensioning

For the maximum torque, the shaft must be strong enough (min. strength 350 N/mm², for example C45).

The hub diameter must be big enough.
 Recommend minimum hub diameter:
 Hub from Steel: $ND = 1,4 \times D$.
 Hub from grey cast iron: $ND = 2,0 \times D$.
 Hub from Aluminium: $ND = 2,5 \times D$.

Clamping Bushes MSD-N

Material: Stainless steel 1.4021.

The MSD-N clamping bush is identical with the MSD bush, but is made from stainless steel. It has been used in many industries for years, as, e.g., the food, medical, automotive, chemical, printing and process engineering industries.

Concentricity 0.03 - 0.06 mm.

Tolerance: Shaft h9 (Ø 15 mm only h8), Hub H7.

Temperature range: -30 °C to 85 °C.

$P_W \approx 90\text{N/mm}^2$ $P_N \approx 70\text{N/mm}^2$

T = transmittable torque at axial force of 0, if the screws are fastened with T_A .

F_{ax} = transmittable axial force at torque of 0, if the screws are fastened with T_A .

T_A = required fastening torque for the screws.

The dimensions refer to bushes before assembly.

Mounting

The bush is mounted quickly. Just place the bush inside the hub and push both onto the shaft. Fasten with a torque wrench.

Demounting

Remove tensioning screws. Put screws in forcing thread and fasten them until the bush is pressed off.

Clamping Sets SIG

Material: Stainless steel 1.4301.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For lower torques.
- Minimal space requirement.
- The connection can be disassembled with a puller.

Required tolerances: Shaft: h8.
Bore of the part to be clamped: H8.
Surface roughness max. 12.5µm.

Ordering Details: e.g.: Product No. 615 104 00, Clamping Set SIG, 4 mm

¹⁾ In preparation: M39x1,25.

²⁾ In preparation: M45x1,25.

Dimensioning

For the maximum torque, the shaft must be strong enough (min. strength 350 N/mm², for example C45).

The hub diameter must be big enough.

Recommend minimum hub diameter:

Hub from Steel: $ND = 1,4 \times D$.

Hub from grey cast iron: $ND = 2,0 \times D$.

Hub from Aluminium: $ND = 2,5 \times D$.

Mounting

- The clamping set has to be mounted without lubrication to achieve the torques stated above.
- The clamping set has to be fully in contact with the shaft.
- The clamping set must not get in contact with any fixed components (e.g. bearing housing or crankcase).
- Tighten the nut with a torque wrench to the torque value as per the table.

Hub Calculation and Selection Tool

in the section **MÄDLER®-Tools**

Clamping Sets SSG

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For low to medium torques.
- Also suitable for small hub diameters.
- Self-centering.
- Self-locking.
- Axial movement during mounting.

Ordering Details: e.g.: Product No. 615 200 14, Clamping Set SSG, 14 mm

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_W = surface pressure onto the shaft.

P_N = surface pressure onto the hub.

T_A = fastening torque of slotted nut.

Fit

Shaft h8, Hub H8.

Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the slotted nut and bend the lock washer.

Demounting

Re-bend the lock washer. Remove the nut. Then, due to the cone angle, the clamping set is usually released. If not, use a wheel puller or use carefully a rubber hammer to loosen the wheel from the clamping rings.

Clamping Sets TT 5-16 mm

Material: Steel.

- For fixing a hub (e.g. drive wheel, rotor or similar) on a shaft.
- For high torques.
- Self-centering.
- Axial offset during mounting (can be compensated by correct positioning).

Fit, Surfaces

Size 5 to 16: Shaft and hub ± 0.04 mm.
Size 17 to 35: Shaft and hub ± 0.08 mm.

Mounting

It is essential to degrease the shaft and hub.
Install clamping sets as delivered, never lubricate them.
Tighten the nut with a torque wrench to the torque value
as per the table.

Shrink Disks ST

Material: 42CrMo4 quenched.

- For very high torques.
- No axial shaft-hub movement.
- Quick mounting.
- Quick demounting.

¹⁾ Shaft-Ø of the customer's machine (for example). ²⁾ Transmittable values with shaft-Ø d_w of the customer's machine.

More sizes up to inner-Ø d=300mm, for shaft diameter 240mm and 292,000Nm are available.

Price and delivery time on request.

Mounting

Clean and slightly lubricate the contact surfaces of shaft and hub. Place clamping set on the hub. Fasten the tensioning screws evenly, step by step until the fastening torque T_A of the table is reached. To reach the value stated in the table several fastening steps are required. The figures for T and F_{ax} stated in the table were calculated for an assembly with oil.

Attention: Do not use any lubricant containing molybdenum sulphide.

Demounting: Evenly unscrew all tensioning screws one by one. Do not fully remove the screws from the thread. The clamping element usually disengages on its own.

Tolerances, Surface Roughness

One good turn is sufficient.
Highest permissible surface roughness: R_t=12.5µm.

Tolerances for d_w/d: h8/H8.

More sizes up to d=110mm for 7,400Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_W = surface pressure onto the shaft.

T_A = Fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Due to the cone angle, the clamping set is usually released once all screws have been fully unfastened.

Taper Bushes

Material: GG20.

Bores ISO E8, feather keyways in accordance with DIN 6885/1. Screws included in delivery.

Shaft tolerance +0.05/-0.125 mm.

Can be used with or without parallel key, depending on the required torque.

Other bush sizes and bores available at short notice (some in stock).

Assembly instructions see page 824.

Welding Hubs for Taper Bushes

Material: Steel (St52 or comparable), good weldable.

Hub for fixing a chain plate wheel or similar parts with a low priced taper bush onto a shaft.
Taper bush and chain plate wheel have to be ordered separately.
Recommended bore tolerance: H8.

Before welding, a taper bush should be mounted with a piece of shaft into the welding hub to avoid deforming by heat.

Other sizes for taper bushes up to type 5050 are available at short delivery time.

Ordering Details: e.g.: Product No. 140 901 01, Welding Hub for Taper Bush 1210

Notes Regarding Couplings

General

Couplings serve to connect two shafts in order to transmit the driving power (transmission of speed and torque). As different applications lead to most diverse requirements for couplings, there is a large number of different types of couplings with sometimes contradictory characteristics

available on the market. If possible, the shafts should be supported right besides the couplings in order to avoid unnecessary vibration. This is particularly important for elastic couplings.

Torque Values

Depending on the type of coupling, the torques stated refer to either the maximum value or the nominal torque. The maximum permissible torque must never be exceeded (risk of fracture). The nominal torque is the value valid for the permissible permanent load (e.g. for elastic couplings). This value should be exceeded only as exception and for short times, and only up to the maximum permissible torque. Depending on the type of drive unit used and the type of shock load, the nominal torque of the drive unit has to be multiplied with the respective operating factor taken from the table below:

Operating Torque = Driving Torque x Operating Factor

The operating torque of the drive unit must not exceed the nominal torque of the coupling.

The driving torque can be derived from the driving power with the following formula:

$$T_{[Nm]} = 9550 \cdot \frac{P [kW]}{n [min^{-1}]} \cdot S$$

Operating Factors

Type of Shock Load

	Type of Drive Unit		
	Electric Engines Steam Turbines Shaftings	4 - 6 Cylinder Combustion Engines	1 - 3 Cylinder Combustion Engines
Weak shock load Low starting torque, uniform operation small light generators, small centrifugal pumps, small blowers, light machine tools, light transmissions	1.0	1.25	1.75
Medium shock load Medium starting torque, slight torque fluctuations larger conveying machinery, large blowers, centrifugal pumps and generators, large machine tools and wood working machines, rapid presses, flower mills and food grinders, shears, punches, grinding machines, washing machines, transmissions	1.25	1.5	2.0
Strong shock load High starting torque, strong shocks, alternating sense of rotation. centrifuges, gang saws, paper calender, roller tables, wet presses, ball and rod mills, heavy rolling mills for metal, rubber rolling mill, reciprocating machines without flywheel, cement mills, stone breakers	1.5	2.0	2.5

Rigid Couplings

These couplings do not compensate for misalignment of the shaft neither in axial nor in radial direction. They should therefore only be used with perfectly aligned shafts. Shocks and vibration are transferred without any damping.

Torsionally-Stiff Couplings

These couplings transmit the rotational movement synchronously with hardly any damping. Depending on the type of coupling more or less angular and/or axial displacement can be compensated.

Elastic Couplings

With these couplings an elastic intermediate ring usually dampens the shocks of the driving unit. In types without this ring, the coupling body is elastic. Due to the small endurance strength of the shock-dampening components, the nominal torque of the coupling is much lower than the maximum torque. The elastic rings are available as spare parts.

Friction Clutches and Sliding Hubs

These clutches or hubs are used if the torque must only be transmitted up to a certain, adjustable value. If the set maximum value is exceeded the coupling device starts slipping. If the torque falls below the limit again, the slipping stops. Thus for safety reasons a separate stop mechanism for the drive unit might be required.

For couplings with elastics inserts, following factors have to be considered, additional to the standard operating factors above:

Friction clutches usually serve to connect two shafts. Sliding hubs usually serve to mount a drive wheel (chain wheel, drive pulley, spur gear, friction wheel, or similar) on a shaft.

Some types can be used for both applications as, e.g., either a drive wheel or a shaft connection can be flange mounted. Combinations of elastic coupling and friction clutch can also be supplied.

One-Piece Clamp Couplings MAS

Material: Steel C45 burnished,
Stainless steel 1.4301.

Temperature range from -40°C to +175°C.

Maximum torque 4,000 min⁻¹.

The screws DIN 912 are covered with a layer of nylon. Thus the bolts do not loosen with vibrations.

Bore tolerance: +0.051 mm.

Ordering Details: e.g.: Product No. 600 603 00, Clamp Coupling MAS, 3 mm Bore, without keyway

* Feather Key Groove DIN 6885/1, Tolerance P9.

** For couplings with keyway: calculations based on feather-key connection.

For couplings without keyway, the transmittable torque is lower and depends on how far the set screws penetrate the shaft.

Clamp Couplings (Box couplings) DIN 115 Made from Cast Iron

Material: Grey Cast Iron GG25.

Up to 50 mm bore these two-part couplings are manufactured according to bore tolerance zone V7. For larger bores the fit is U7. All bores have a feather key groove according to DIN 6885/1. Recommended shaft tolerance: f7.

A bearing must be placed right beside both ends of the coupling. Box couplings can be assembled and dismantled in radial direction without moving the shaft in vertical direction.

Version A: For shafts of the same diameter.

Version B: For shafts of different diameter available on request.

Clamping Sets (Rigid Couplings) ST-K

Material: Steel.

- For connecting two shafts, as a rigid coupling.
- For medium torques.
- Easy mounting.
- Self-releasing at dismounting.
- No axial movement during mounting.

Ordering Details: e.g.: Product No. 615 880 15, Clamping Set ST-K, 15 mm

More sizes up to d=110mm for 7,400Nm are available.

Price and delivery time on request.

T = transmittable torque at F_{ax} = 0.

F_{ax} = transmittable axial force at T = 0.

P_W = surface pressure onto the shaft.

T_A = Fastening torque of the screws.

Fit

Shaft h8, Hub H8.
Surface roughness max. 12.5µm.

Mounting

Slightly oil the clamping set before mounting, do not use molybdenum disulphide or grease. Tighten the screws evenly and crosswise in several steps.

Demounting

Due to the cone angle, the clamping set is usually released once all screws have been fully unfastened.

Torsionally-Stiff Couplings HU

Material:

Up to D1 = 28 mm hubs made from brass, chromated and passivated.
From D1 = 41.4 mm aluminium alloy with iridite NCP finish.

Torque disc made from black acetal.

These unique, zero backlash, general purpose couplings provide electrical insulation. They are designed for the lower torque range and offer generous angular and radial misalignment compensation. Their axial stiffness is unique and they can anchor unrestricted shafts or perform light push/pull duties

Applications: pulse-triggered drive units (e.g. stepper motors, transducers, engine speed sensors, potentiometers).

Temperature range: -20°C to +60°C.

Ordering Details: e.g.: Product No. 601 002 00, Coupling HU, 2 mm Bore

Product No.	Torque max. ²⁾ Nm	Static Break Torque Nm	Bore B ^{+0.03} mm	L ₁ mm	L ₂ mm	L ₃ mm	D ₁ mm	max. Compensation at 3000min ⁻¹ 1)		Torsional Stiffness Nm/rad	Weight g

1) At lower speeds the couplings can compensate up to +/-1 mm radial and 10° angular displacement. The sizes D₁ = 19 and D₁ = 28 only 5 degrees.

2) Operating factors for couplings HU and HB (without shaft displacement):

Load Period	Operating Factor
short term	1
1 hour per day	1.5
3 hours per day	2
6 hours per day	3
12 hours per day	4

Clamp style (bore 16 in set-screw style)

Torsionally-Stiff Couplings HZ with Blind Hole

Material: Hubs made from aluminium alloy with iridite NCP finish. Sliding disc made from black acetal.

These 3-part zero-backlash couplings provide electrical insulation. They consist of two hubs and a sliding disc. They are versatile and of robust design. Large radial compensation, easy mounting even in confined spaces.

Applications: Ideal for stepper motors due to the damping properties of plastic torque rings. Positioning drives, position encoders and incremental or absolute encoders, pumps etc.

Temperature range: -20°C to +60°C.

Torsionally-Stiff Couplings HFD with Through Hole

Material: Hubs made from aluminium alloy with iridite NCP finish.
Sliding disc made from black acetal.

These 3-part zero backlash couplings provide electrical insulation. They consist of two hubs and a sliding disc. They are versatile and of robust design. Large radial compensation, easy mounting even in confined spaces.

Application: see description HZD (above).

Torsionally-Stiff Couplings HZD with Through Hole, Stainless

Material: Hubs made from stainless steel 1.4305.
Torque disc made from black acetal.

These 3-part zero backlash couplings provide electrical insulation. They consist of two hubs and a torque disc. They are versatile and of robust design. Large radial compensation, easy mounting even in confined spaces.

Applications: Ideal for stepper motors due to the damping properties of plastic torque discs. Positioning drives, position encoders such as incremental or absolute encoders, pumps etc.
Temperature range: -20°C to +60°C.

Self-Aligning Couplings KA, Short Version

Material: Plastic acetal.
Aluminium 2014A.
Stainless steel 1.4305.

- Torsionally rigid design.
- Zero backlash.
- Perfect transmission of torque.
- Very low restoring force.
- Speed max. 5,000 min⁻¹.

Number of screws: at plastic and steel 2 screws on each side.
At aluminium: 1 screw on each side.

Ordering Details: e.g.: Product No. 602 608 00, Coupling KA, Plastic, Bore 4mm

* Please regard the operating factors page 377.

*** Shaft must not be pushed in any further. ¹⁾ Against surcharge.

Flexible Couplings EK

Material: Hubs made from zinc die-cast, Spring: Spring steel type C zinc-plated.

These couplings are elastic all-metal couplings, with hubs and spring bodies made from rustproof metal. The couplings only have a one-layer spring body. They are, however, flexible in all directions, suitable for both rotational directions and maintenance-free. They are locked against rotation with Allen set screws.

Temperature range from -40°C to +120°C.

Couplings are available pre-drilled ex stock.

Customized bores and feather-key grooves available at extra charge.

Ordering Details: e.g.: Product No. 602 000 00, Clutch EK, Pre-bored

Flexible Couplings EL

Material: Hubs 11 SMn Pb 37, from Ø 55 mm CK45.

Spring: Spring steel type C.

Stainless version: Hub 1.4305.

Spring: Spring steel 1.4310.

These couplings are elastic all-metal couplings and completely maintenance free. The all-metal design leads to a strong resistance against oil and higher temperatures: -40°C to +100°C. Stainless version: -40°C to +300°C. The elastic part consists of a spring body, made up of three layers of wound springs welded into the connecting hubs. The couplings are suitable for both rotating directions. They can be locked against rotation with a feather key or with pins. The couplings are press-fitted. Demounting is done by pressing or pulling off. Vibrations and shocks are largely absorbed. Depending on the length of the coupling - S, L or Db - bending of 3 - 6° or axial displacement of 3 - 6% of the nominal shaft diameter are possible.

Couplings are available pre-drilled ex stock.

Customized bores and feather-key grooves available at extra charge.

Metal Bellow Couplings MBK and MBL

Material: Hubs aluminium, bellow stainless steel.

- Zero backlash, with high torsional stiffness.
- For highly dynamic positioning and servo systems, pumps, portal drives etc..
- With clamps, ready-to-install for rapid mounting.
- Short and long versions with different misalignment values and different stiffnesses.
- Many different sizes and diameters available.

Temperature range: -40°C to +120 °C.

Ordering Details: e.g.: Product No. 601 518 03, Metal Bellow Coupling MBK, 3mm

¹⁾ Standard bores. ²⁾ Different bores (even one-sided) up to max bore available against surcharge.

* The maximum torque is calculated for drives with uniform load and constant speed, and without shaft misalignment or axial displacement e.g.:

Counter torque of application = 2 Nm
 Operating factor = 3
 Required torque = 6 Nm

Select a coupling, with a max. torque larger than 6 Nm. Please note that the max. misalignment values (axial, radial and angular displacement) are mutually exclusive, i.e., if the misalignment in one direction reaches the maximum, the other two remaining misalignments must be at zero.

Operating Factors

Type of Load	Operating Factor
Uniform Load	1.5
Alternating Load	2
Shock load	3
Reversing shock load	4

Fastening torques page 378

Metal Bellow Couplings MCK and MCL

Material: Aluminium clamp hubs, stainless steel bellow.

- Zero backlash, with high torsional stiffness.
- For machine tools, packing machines, textile machines, Linear drives etc..
- With clamps, ready-to-install for rapid mounting.
- Short and long versions with different misalignment values and different stiffnesses.
- Many different sizes and diameters available.

Temperature range: -30°C to +100 °C.

Ordering details: e.g.: Product No. 601 546 10, Metal Bellow Coupling MCK, 10mm

Uniform Load	1.5
Alternating Load	2
Shock Load	2.5
Reversing shock load	4

Please note that the max. misalignment values (axial, radial and angular displacement) are mutually exclusive. If the misalignment in one direction reaches the maximum, the other two remaining misalignments must be at zero.

Membrane Couplings, Clamp Style MEM

Materials:

Hubs and sleeves: Aluminium alloy 2011T3 and 2011T8
BS 4300/5 FC1,
clear anodised finish.

Membranes: stainless high-quality spring steel.

Screw connection: Screws: heat-treated steel,
burnished.

Bushes: Steel zinc-plated and chromated black.

Connecting parts: Heat-treated steel, burnished.

Temperature range: -40°C to +120°C.

Max. speed: 5,000 min⁻¹.

Torsionally-stiff construction, no moving parts, all-metal design,
low moment of inertia.

The functional principle offers the highest operational readiness
to be achieved with flexible couplings. Excellent kinematic prop-
erties and high torsion-spring stiffness. Suitable for servo drives.
Tolerant flexural system and a dynamically balanced construc-
tion for high-end positioning and servo drives.

* B is the minimum dimension by which a machine part has to be moved in order to demount one of the coupled units in vertical direction.

General

All parts of the couplings are made from plastic (polyamide). This means large wear resistance and excellent resistance to oils, fats, grease, fuels, alcohols, esters, ketones, and grachatic hydrocarbons. But concentrated mineral acids, formic acid, kresol, glycol and benzyl alcohol can - especially at higher temperatures - dissolve polyamide 6.6. The plastics are resistant to condensation and splash water. Operating temperature -25°C to +100°C.

The torque of the couplings is transmitted from the first hub with the toothing via the sleeve part with straight inner toothing onto the second hub. Horizontal as well as vertical shaft connection is possible. The curved-tooth gear couplings BW compensate angular and axial misalignment of the shafts.

When running the coupling in, the outer layer of the plastic teeth is worn away. The resulting flocculent abrasion is not to be interpreted as wear. Simple mounting - no maintenance - low weight - long service life.

Mounting

Align shafts, put feather keys into the keyways, push hub and sleeve part onto the shaft. The set screws can be entered. Now the hub part is pushed that far into the sleeve part, that a gap of 2mm remains between the shaft ends. Then the set screws have to be tightened firmly.

Curved-Tooth Gear Couplings BOZ, Polyamide 6.6

Tolerance of the bore + 0.05/-0.10 mm with feather keyway according to DIN 6885/1.

Largest axial displacement = max. ± 1 mm.
Largest angular displacement = max. $\pm 1^\circ$ per hub part.

Largest radial displacement at 1500 min⁻¹.
Product No. 607 000 00 to 607 200 00 = max. 0.3 mm.

Product No. 607 400 00 = max. 0.35 mm.

The permissible displacement values are dependent on power and speed.

Max. speed: 6,000 min⁻¹.

All 3 parts have to be ordered seperately.

Bore tolerance H7 with keyways DIN 6885/1 and set screws (2 screws per hub).

Hubs with * are pre-bored, without keyway and without set screw threads.

Axial displacement = max. ± 2 mm per hub.

Angular displacement = max. $\pm 1^\circ$ per hub.

Radial displacement = max. 0.3 mm at 1500 min⁻¹.

The permissible displacement values are dependent on power and speed.

Temperature range: -40°C to +80°C,

short time up to +120°C.

All 3 parts have to be ordered separately.

Other sizes and bores on request.

Ordering Details: e.g. for coupling Size 28,

with bore 14mm and bore 15mm:

1 Item Product No. 607 628 14 Hub, size 28, bore 14mm

1 Item Product No. 607 628 15 Hub, size 28, bore 15mm

1 Item Product No. 607 628 00 Sleeve, size 28

Position of set screws:

1 x on keyway, 1 x 90° displaced.

* Hubs pre-bored, without keyway, set screw threads and screws.

** B is the minimum dimension by which a machine part has to be moved in order to demount one of the coupled units in vertical direction.

General

Simple mounting - no maintenance - long service life.
When running the coupling in, the outer layer of the plastic teeth is worn away. The resulting flocculent abrasion is not to be interpreted as wear.

Mounting

Align shafts, put feather keys into the shafts, push hubs onto the shafts. Push the hubs into the sleeve part, until you reach length L. The distance between the shafts should be measure E. Then the set screws have to be tightened firmly.

Chain Couplings with Casing

Material: Chain wheels made from steel, teeth hardened.
Chain with clip link made from steel.
Casing made from aluminium, yellow painted, with o-ring-seals.

- Elastic transmission of torque.
- Compensation of large shaft disalignment.
- Fast declutching by simply loosening the chain.
- Axial shaft movement is allowed.
- Not for strong shocks recommend.

The chain wheels are pre-bored. Customized bores, featherkeys and setscrew threads against extra charge.
At mounting, the casing has to be filled with grease.
Temperature range: -30°C to +120°C.

Chain Couplings

Material: Steel, with double-strand chain DIN 8187.

The couplings are delivered assembled or unassembled.
The chain is packed separately. Number of teeth = 18.

- Elastic transmission of torque.
- Compensation of large shaft disalignment.
- Fast declutching by simply loosening the chain.
- Axial shaft movement is allowed.
- Not for strong shocks recommend.

The chain wheels are pre-bored. Customized bores, featherkeys and setscrew threads against extra charge.

Temperature range: -30°C to +220°C.

24h-service possible.
Custom made parts
on request.**

Elastic Couplings MU

Material: The two halves of the coupling are made from magnesium alloy. Insert made from neoprene.

These couplings are particularly suited for pump drives, requiring high torque combined with a low-weight coupling. The two halves of the coupling are made from special magnesium alloy. This keeps the weight of the coupling down. The insert, made from neoprene, elastically assimilates shock loads. The rim of the neoprene insert automatically leads to the correct axial clearance. Its sealing property also means that the coupling does not need to be protected, even in dusty environments. No frictional corrosion, i.e., easy disassembly even after longterm use. The two halves of the coupling offer full electric insulation.

Couplings are available pre-drilled ex stock.

Customized bores and feather-key grooves available at extra charge.

Temperature range: -30°C to +120°C.

Ordering Details: e.g.: Product No. 603 022 00, Coupling MU, without Bore

Highly Elastic Couplings PU

Materials: Polyester, hubs either zinc plated steel or stainless steel 1.4305.

These torsionally-stiff couplings made in one-part from flexible plastic are easily mounted.

They show very good chemical resistance against acids, bases, solvents, greases and oils. They have a very high tear resistance, are highly flexible at low temperatures, have good shock and vibration damping properties and are corrosion resistant.

Max. speed: 3000 min⁻¹.

Temperature range: -40°C to +100°C.

Ordering Details: e.g.: Product No. 603 201 00, Highly Elastic Coupling PU, zinc-plated

¹⁾ Max. torque at max. shaft displacement. The bracketed values are valid for a shaft displacement of 1°, 0.5mm radial and 2mm axial.

²⁾ Standard bore. Other bore sizes on request. Bracketed values: Max. possible bores.

Reworking within 24h-service possible. Custom made parts on request.

Elastic Couplings ME

Material: Polyamide.

These plastic couplings consist of only two parts. There are none of the usual toothed rings or rubber inserts. The coupling bodies are made from polyamide. From 3 Nm, the bores of the coupling are lined with an aluminium bush. Immaculate functioning at operating temperatures of -25° to +80°C, short term up to +100°C. The couplings are resistant to condensation and splash water, as well as oil, grease, fat, fuel, alcohol and bases, but not resistant to phenol, acids and benzyl alcohol. The couplings require no maintenance. A single application of fat or oil onto the contact areas when mounting the coupling does however increase the service life.

Couplings are available pre-drilled ex stock.

Customized bores and feather-key grooves available at extra charge.

Ordering Details: e.g.: Product No. 603 310 00, Coupling ME, Pre-drilled

Elastic Couplings RNG

Material: Coupling hubs: Grey Cast Iron GJL25.
Spider (insert): Polyurethane, hardness 92°A Shore (yellow).
Spare part plastic spider available in 92°A (yellow), 98°A (red) or 64°D (green).

Couplings are pre-bored ex stock.

Customized bores and feather-key grooves available at extra charge.

Temperature range: -40°C to +90°C.

Ordering Details: e.g.: Product No. 605 300 00, Coupling RNG

Elastic Couplings RNT for Taper Bushes

Material: Coupling hubs: Grey Cast Iron GJL25.
Spider (insert): Polyurethane, hardness 92°A or 98°A Shore.

Two coupling hubs combined with an insert and two taper bushes make up a ready-to-install elastic coupling. **All components have to be ordered separately.** This means accessibility (mounting from the inside or outside) and various bore diameters can be chosen. Temperature range: -20°C to +80°C.

Design IS: Mounting of bush from inside.
Design AS: Mounting of bush from outside.

Ordering Details: e.g.: Product No. 605 201 01, Coupling Hub RNT, Version IS
605 201 01, Coupling Hub RNT, Version AS

Elastic Couplings RNK, backlash-free, with clamps

Material: Size 5 - 38: Hubs made from Aluminium.
From size 42, made from steel. Spider made from Polyurethane.
Size 5 - 9: Shore hardness 92° (yellow or white).
From size 14: Shore hardness 98° (red).

- Zero backlash, insertable elastic coupling.
- With clamps, ready-to-install for rapid mounting.
- Many different sizes and diameters available.
- From size 14 can be exchanged with couplings RN, RNH and couplings from many other suppliers.
- On request with soft inserts.

Temperature range: -30°C to +90°C.

1) Standard bores (both sides).

2) Different bores (even one-sided) up to max bore as well feather keyways, available against surcharge (smaller bores as special parts).

3) Follow the breakdown Ø as per the table below (screw head protrudes over diameter D_H or D).

4) Maximal values are mutually exclusive.

5) Above 30m/s, dynamic balancing is required.

Elastic Couplings RNH, backlash-free, with half shell clamp

Material: Size 14 - 38: Hubs made from Aluminium.
From size 42, made from steel. Spider made from Polyurethane.
Shore hardness 98° (red).

- Zero backlash, insertable elastic coupling.
- With removable half shell clamps, ready-to-install for rapid mounting with the possibility of demounting without removal of the other units.
- Many different sizes and diameters available.
- Size exchangeable with couplings RN, RNK and couplings from many other suppliers.
- On request with soft inserts.

Temperature range: -30°C to +90°C.

Half shell, removable

¹⁾ Standard bores (both sides).

²⁾ Different bores (even one-sided) up to max bore as well feather keyways, available against surcharge (smaller bores as special parts).

³⁾) Follow the breakdown \varnothing as per the table below (screw head protrudes over diameter D_H).

⁴⁾ Maximal values are mutually exclusive.

⁵⁾ Above 30m/s, dynamic balancing is required.

Further details and dimensions

Size	Torque ¹⁾		Screw size DIN 912	Tightening Torque Nm	Max. \varnothing ²⁾ mm	Torsion spring stiffness		Moment of inertia ³⁾ 10^{-6} Kg m^2
	T_{kN} Nm	T_{kmax} Nm				static Nm/rad	dynam. Nm/rad ⁴⁾

48	525	1050	M12	86	105	22370	45620	8260

¹⁾ Nominal moment and max. moment for the design. The permitted torque for each bore size may not be exceeded.

²⁾ Screw head protrudes past diameter D_H .

³⁾ Each one calculated with the max. bore.

⁴⁾ At $0,5 \times T_{kN}$.

Spiders for Elastic Couplings, standard type, 92° Shore A

Material: Polyurethane, shore hardness 92°A (soft), yellow.

Spiders (plastic inserts) for elastic couplings (jaw couplings) like RN, RNG, RNI, RNR, RNT and foreign parts of the same kind from other suppliers. Soft type, for common usage. Temperature range -40°C to +90°C.

Ordering Details: e.g.: Product No. 605 092 07, Spider standard, 92°A, Size 7

* Size 7 and 9: White or yellow, depending on the producer.

T_{KN} = Nominal torque.

T_{K max} = Peak torque.

Spiders for Elastic Couplings, standard type, 98° Shore A

Material: Polyurethane, shore hardness 98°A (medium hard), red.

Spiders (plastic inserts) for elastic couplings (jaw couplings) like RN, RNG, RNI, RNR, RNT and foreign parts of the same kind from other suppliers. Medium hard type, for high torques. Temperature range -30°C to +100°C.

Ordering Details: e.g.: Product No. 605 098 14, Spider standard, 98°A, Size 14

* From size 65 shore hardness 95° A.

T_{KN} = Nominal torque.

T_{K max} = Peak torque.

Spiders for Elastic Couplings, standard type, 64° Shore D

Material: Polyurethane, shore hardness 64°D (hard), green.

Spiders (plastic inserts) for elastic couplings (jaw couplings) like RN, RNG, RNI, RNR and foreign parts of the same kind from other suppliers. Hard type, for very high torques at small torsion angle. Temperature range -20°C to +100°C.

Ordering Details: e.g.: Product No. 605 064 14, Spider standard, 64°D, Size 14

Product No. green	Size	Ø mm	No. of teeth	Transmittable torque			Torsional angle		Speed at 30m/s min ⁻¹	Weight g
				Nominal Nm	Peak Nm	Altern. Nm	T _{KN} °	T _{K max} °		
605 064 14	14	30	4	16	32	4,2	4,5	7,0	19000	5
605 064 19	19	40	6	21	42	5,5	2,5	3,6	14000	7
605 064 24	24	55	8	75	150	19,5	2,5	3,6	10600	22
605 064 28	28	65	8	200	400	52	2,5	3,6	8500	32
605 064 38	38	80	8	405	810	105	2,5	3,6	7100	58
605 064 42	42	95	8	560	1120	146	2,5	3,6	6000	70
605 064 48	48	105	8	655	1310	170	2,5	3,6	5600	98
605 064 55	55	120	8	825	1650	215	2,5	3,6	4750	120
605 064 65	65	135	8	1175	2350	306	2,5	3,6	4250	210
605 064 75	75	160	10	2400	4800	624	2,5	3,6	3550	340
605 064 90	90	200	10	4500	9000	1170	2,5	3,6	2800	700
605 064 95	100	225	10	6185	12370	1608	2,5	3,6	2500	900

Note: Spiders with hardness 64°D Shore are not recommended for taper couplings. At couplings made from aluminium, the effective torque should not be higher than the transmittable torque of the 98°A Shore spiders.

T_{KN} = Nominal torque.

T_{K max} = Peak torque.

Spiders for Elastic Couplings, backlash-free type, 92° Shore A

Material: Polyurethane, shore hardness 92°A (soft), yellow.

Spiders (plastic inserts) for backlash-free elastic couplings (jaw couplings) like RNH and RNK and foreign parts of the same kind from other suppliers. Soft type, for common usage. Temperature range -40°C to +90°C.

Ordering Details: e.g.: Product No. 605 192 05, Spider backlash-free, 92°A, Size 5

605 164 55	55	120	8	825	1650	41460	103650	9248	3150	115

Note: Spiders with hardness 64°D Shore are not recommended for taper couplings. At couplings made from aluminium, the effective torque should not be higher than the transmittable torque of the 98°A Shore spiders.

Elastic Couplings DX

Material: To product 604 028 00: Hubs made from Aluminium.
From product 604 032 00: Hubs made from grey cast iron GG25.
Insert made from Polyurethane, shore hardness 92° A (soft).

- Insertable elastic coupling.
- Not backlash-free. Does not transfer any axial forces.
- Robust component for relatively large shaft offset.
Particularly suitable for large radial offset.
- Different sizes, up to a maximum nominal torque of 3,000 Nm.

Temperature range: -20°C to +80°C.

Couplings are available pre-drilled ex stock.
Customized bores and feather-key grooves available at extra charge

Ordering Details: e.g.: Product No. 604 024 00, Coupling DX without Bore

* Material aluminium.

¹⁾ The stated maximum values for shaft misalignment must only occur in a single direction. With multiple misalignment the values have to be reduced. Furthermore, the figures stated are only valid up to a speed of 600 min⁻¹. At higher speeds the misalignment values must again be reduced.

Spiders for Coupling DX

Material: Polyurethane, shore hardness 92° A (soft).

Only suitable for couplings DX.

Temperature range: -20°C to +80°C.

Slip Clutches R2 and R6

Type A - Concentric Arrangement

as sliding hub for a driving wheel

Type B - Axial Arrangement

to connect two shafts

Type C - Axial Arrangement

to connect two shafts with shaft misalignment

Material: Housing made of aluminium alloy with iridite NCP finish. Inner Hub made of steel.
Max. slip-speed 1,000 min⁻¹. Torsional backlash of the coupling below 2°.

Sectional drawing of a slip clutch with 6 clutch plates

Torque range with 2 friction plates 2.4 Ncm to 53.8 Ncm. Dissipation at 20°C ambient temperature up to 7 watts. **Torque range with 6 friction plates 7.8 Ncm to 132.4 Ncm.** Dissipation at 20°C ambient temperature up to 8.6 Watt. Maximum permissible temperature at the surface for all sizes during operation 80°C.

An adjusting ring - screwed to the outer body - serves to adjust the torque. This ring acts via a disk spring onto the clutch or friction disks. Two sintered bearing sleeves serve as bearing housing to inner component. An O-Ring seals the hub off against dirt and with its friction force it also makes sure that the adjusting ring is not moved unintentionally. **The power can be connected to either the hub or the housing.**

Depending on the specific application, the friction clutch can be employed as torque limiter, as overrunning clutch or as brake. As the generation of heat is basically a function including the slip torque and the employed torque, the following formula was derived:

$$\frac{\text{Slippage (min}^{-1}) \times \text{Torque (Ncm)}}{955} = \text{Heat Dissipation in Watts}$$

As the connected components (shafts, gears, etc.) support the heat dissipation, in case of doubt please calculate the effective surface temperature under adverse operating conditions. The permissible temperatures are stated above.

Special designs: the modular-design principle used in slip clutches leads to many different designs and possible connecting parts, e.g., special flanges and other components, according to drawings.

ATTENTION: the adjusting screws can damage the adjusting ring if they are loosened too far. 3/4 to 1 turn is sufficient.

Concentric mounting (type A)

- 1) Pulley or sprocket (bondage recommend), shaft also used as bearing.
- 2) Mounted to the housing as permanent brake and shaft bearing.
- 3) Connection electronic engine and gear box, with assembly-related shaft misalignment.

Axial arrangement, both shafts outside (type C)

Axial arrangement, one shaft outside (type B)

- 4) Shaft of a multi-turn potentiometer divided with slip clutches. No overrevving.
- 5) Protecting a lever key from damage using a slip clutch.

Sliding Hubs with Torsionally-Flexible Coupling RNR

Material: Sliding hub: steel, zinc-plated and chromated, rust-proof friction pads.

Elastic coupling: coupling hub steel (size 00 from aluminium), spider (plastic insert) Polyurethane. Hardness 92° Shore A (optional 98° Shore A).

- The slipping torque can be adjusted with common assembly tools for screws.
- The elastic coupling can be mounted in axial direction.
- Torque can be altered after mounting.
- By mounting additional springs, the torque range can be increased. (additional springs have to be ordered separately).
- Customized bores and feather-key grooves available at extra charge.

Multi-Plate Friction Clutches PD

Material: Steel.

Multi-plate friction clutches have proven to deliver an optimal performance when used with slow-starting machines. They are also used as safety couplings. The occurring torque peaks are levelled out by friction clutches. The disk pairing is steel/sintered bronze, with the inner plates of the pairings lined. The composition of the lining means up to 400°C can be withstood short term. At permanent load, however, only up to 250°C. Sintered clutch plates have the advantage of an almost constant friction coefficient even with fast growing circumferential speeds and higher temperatures. The assembly can be used for dry and wet operation. Advantages of these couplings are: Practical dimensions. Easy adjustment and re-adjustment. Inner and outer plates with special splines.

Couplings are available pre-drilled H7 ex stock.

Customized bores and feather-key grooves available at extra charge

³⁾ From Bore 38 mm only with flat feather key-grooves according to DIN 6885/3.

* Max. transmittable torque for dry or wet operation. The minimum adjustable torque is at about 50% of the maximum value.

Construction and Mounting

The disk-mount 101 is equipped with splines, guiding the sinter-plates 215. The casing 8704 also has splines, which guide the outer plates 251 made from steel. The last component of the disk pack is a pressure plate 201. The disk spring 414 together with the adjusting screw 8401 lead to the friction grip of the disk pack. During assembly please make sure that the disk-mount 101 and the casing are securely fixed in axial direction. When connecting 2 shaft ends, one shaft has to be mounted inside the housing 8704 supported by a centering bearing. The disk-mount 101 must not rub against the casing 8704, but

against the sleeve or the bearing ring. Make sure no oil or fat enters the disk pack. For readjustment loosen the locking screw in the nut 8401. Turning left will increase the torque, turning left leads to a reduction. After re-setting always re-tighten the locking screw. When ordering spare parts always state the factory number 8401 on the adjusting screw .

**Reworking within

Safety Clutches SI

Material: Steel.

This clutch is a backlash-free overload system operating on the positive principle. It works with the recently developed principle of the "punched disk spring". At overload the disk spring disengages, the torque flow is interrupted. After the overload has passed, the clutch re-engages on its own.

The axial movement of the shift ring can be used to trigger a limit switch/sensor turning off the engine (travel 2mm).

Customer components (e.g. sprockets, pulleys) can be easily integrated; special components, as needed for the common systems, are not required here.

Customized bores and feather-key grooves available at extra charge.

Limit Switch (Engine-Emergency-Stop Switch)

Ordering Details: e.g.: Product No. 612 605 00 Limit Switch

Product No.	Weight in g
612 605 00	324

Material: Housing made from aluminium die-cast, painted grey, with rubber seal. Switch made from brass. Bellow made from neoprene (black). Housing screws zinc-plated. Cable connection made from plastic (grey).

Electrical connection: 220-250V AC, 10 A.

Application: Robust limit switch for safety clutches SI (see above) and safety clutches CM (page 398) or similar applications. If the torque set on the clutch is exceeded, the clutch slips. At the same time the shift ring moves. The shift ring then triggers the switch and turns off the engine. This protects the entire drive system and prevents possible damage.

Mounting: On the back wall are two bores Ø 4.3 mm. These fit two screws M4 with internal hexagon, slot or cross recess (head-Ø up to 7 mm). The wall thickness around the mounting holes is 8 mm.

Dimension Z₁ for Limit Stop with Clutches SI

Product No. 612 720 00 to 612 750 00: 2 mm

Dimensions Z₁ for Limit Stop with Clutches CM

Size 20: 1.4 mm
 Size 25: 2.3 mm

 Size 45: 2.7 mm
 Size 55: 3.7 mm

Reworking within 24h-service possible. Custom made parts on request.

Safety Clutches CM

Material: Steel.

Overload system operating on the positive principle, available in 5 sizes. For each size there are 4 different disk-plate sets for different torque ranges. **The required disk-plate set has to be ordered separately and is supplied unassembled.**

When mounting simple driving elements, as sprockets, pulleys, etc., always make sure the shaft is supported.

Optimal protection against overloads.

Trigger torque can be adjusted.

High reproducibility of the triggering and re-engaging process.

Robust design, long service life, absolutely maintenance free.

Immediate free-wheeling of the drive. Automatic emergency stop of the driving unit through switch (to be ordered separately).

Not negatively affected by frequent triggering sequences.

The disk-plate sets (S, M, L or LL) and the limit switch (emergency-stop switch) for all sizes Product No. 612 605 00 (page 397) have to be ordered separately.

Customized bores and feather-key grooves available at extra charge.

Functioning

At normal operating conditions, the safety clutch transmits the torque from the driving shaft via the ball race onto the flange (3). The balls (4a) are pressed into the CNC-milled recesses in part (2) and (3) by the disk plates (6). In case of overload, i.e., if the torque request exceeds the preset limit, the clutch halves are separated; the remaining transmitted torque is very low. When the balls are lifted out of the recesses, against the spring pressure, the clutch part number (2) is moved in axial direction. This movement can be used to trigger an emergency-stop switch (9) for an engine. The clutch re-engages on its own as soon as the torque requirement falls below the set limit. Torque adjustment: By screwing in the torque-adjusting nut (7) all disk plates are further pretensioned (6). As soon as the desired pretension is achieved, the adjusting screw has to be fixed in position with the set screws (8).

Operating Factors

This table shows the operating factor that should - dependent on the type of application - be used as basis for calculating the correct size.

Operating Conditions

Centrifugal Moment	Uniform	Shock	Reversing
Low	1,4	1,7	2,0
Medium	1,7	2,0	2,3
High	2,0	2,4	2,6

Reworking within 24h-service possible. Custom made parts on request.

Sliding Hubs FS

Material:

Hub: Steel, zinc-plated and yellow passivated. Spring: Steel, black.

The sliding hubs can be delivered ex stock, pre-drilled with a bush of the length in **bold print**.

Required bush length:

The required bush length depends on the width of the component to be joined.

Up to Prod. No. 612 006 00:

Bush length 4.2 mm for a component width of 5.3 to 6.0 mm.

From Prod. No. 612 010 00:

Bush length in mm = 1.5 x G + C.

Other bush lengths and customized bores or feather-key grooves against extra charge.

Ordering Details: e.g.: Product No. 612 000 00, Sliding Hub FS

General

The sliding hubs FS are safety devices working on the positive principle. In case of overload, the disk clamped between the friction disks starts slipping and thus keeps the torque within the permissible limits. The power reengages automatically as soon as normal load is reached again. The hubs are cadmium plated for rust-protection. The drive disk is mounted on a maintenance-free bush made from sintered metal. Up to product no. 612 040 00, the torque is set with a hexagon adjusting screw. From product no. 612 050 00 the torque is set with a threaded ring with 3 hexagon nuts. On first use, the sliding hubs should be run in for about 250 turns at a speed of 60 min⁻¹. This should be done at a hub setting of 70-80% of the max. torque for one plate disk. Wear due to frequent slipping reduces the set torque. The figures in the table are calculated for dry operation.

With oil the load can be reduced by 50%. Higher torques, at the same outer diameter, can be achieved with a second spring disk.

Exception: Product No. 612 000 00 has 2 springs, Product No. 612 001 00 has 4 springs.

Mounting instruction at www.maedler.de in the section Downloads.

Reworking within 24h-service possible. Custom made parts on request.

Sliding Hubs FA as Torque Limiters for Chain-, Gear- and Belt Drive-wheels

Material: Steel, zinc-plated and chromated.

- High-quality version.
- The slipping torque can be adjusted with common assembly tools for screws, also after mounting.
- By mounting additional springs, the torque range can be increased. (additional springs have to be ordered separately).
- The hubs are delivered with pilot bore and max. bush length. Customized bores, keyways and bush lengths at extra charge.

Required bush length:

The bush length required depends on the width of the component to be joined. To calculate the bush length take the width of the component and add 1.5 times the thickness of the friction disc, plus an additional 0.5mm.

Bush length in mm = $1.5 \times s + b + 0.5$.

Drawing: size 01 - 05

¹⁾ 2 pieces required. ²⁾ Set with 16 springs. ³⁾ Set with 24 springs. ⁴⁾ Set with 32 springs.

Technical Explanations

The driving element (sprocket or pulley) is pushed onto the bush and clamped between the friction discs, supported by the round adjusting nut, the pressure plate, preload screws and the disk spring. The harder the disk spring is compressed by the pressure plate, the higher is the torque at which the driving element slips. The exact adjustment values for the torque can be found in the table stuck onto the sliding hubs.

Mounting instruction at www.maedler.de in the section Downloads.

Remarks to the versions

The pictures above show size 01 to 5. Sizes 00 and 0 are on the left side without hub. From size 6, instead of the central disc spring, there are pairs of little disc springs around each preload screw.

Customized bores, keyways and bush lengths are available at extra charge.

Torque - Increase

The torque values refer to the sprocket version with ground surfaces. Non-ground surfaces lead to faster wear of the friction disks.

Wear due to frequent slipping reduces the set torque.

At all sizes, the specified torque can be doubled by the addition of a (second) disc spring. The torque ranges with one or two disc springs are shown in the table.

At sizes from 01 to 5, the specified torque can be tripled by the addition of a (third) disc spring. The minimum torque setting is then approx. 65% of the maximum value.

Sliding Hubs FAK as Torque Limiters, with Clamp Hub

Material: Steel, zinc-plated and chromated.

- Clamp hub version.
- The slipping torque can be adjusted with common assembly tools for screws, also after mounting.
- By mounting an additional springs the torque range can be increased (additional spring has to be ordered separately).
- The hubs are delivered with pilot bore and max. bush length. Customized bores, keyways and bush lengths at extra charge.

Required bush length:

The bush length required depends on the width of the component to be joined. To calculate the bush length take the width of the component and add 1.5 times the thickness of the friction disc, plus an additional 0.5mm.

$$\text{Bush length in mm} = 1.5 \times s + b + 0.5.$$

ROBA®-Sliding Hubs as Torque Limiters for Chain-, Gear- and Belt Drive-wheels

Material: Steel, zinc-phosphated.

ROBA®-sliding hubs are high-quality machine components. They are machined all-round and zinc-phosphated, i.e. rust-proof. They are of fully-closed design.

The sliding hubs are delivered pre-drilled with the max bush length (for b_{max}).

Required bush length:

The bush length required depends on the width of the component to be joined. To calculate the bush length take the width of the component and add 1.5 times the thickness of the friction lining, plus an additional 0.5mm.

Bush length in mm = $b + 1.5 \times s + 0.5$.

Other bush lengths, customized bores feather-key grooves and setscrew-threads available at extra charge.

Pictured version for up to 700 Nm max.

Ordering Details: e.g.: Product No. 612 300 00, ROBA-Sliding Hub

* 2 pieces required.

Technical Explanations

The driving element (sprocket or pulley) is pushed onto the bush and clamped between the friction disks, supported by the pressure plate, the disk springs and the adjusting nut. The harder the disk springs are compressed by the adjusting nuts, the higher is the torque at which the driving element slips. The exact adjustment values for the torque can be found in the table stuck onto the sliding hubs.

The torque values refer to the sprocket version with ground surfaces. Non-ground surfaces lead to faster wear of the friction disks.

Wear due to frequent slipping reduces the set torque.

Torque – Increase

Changing the series stacking shown to a parallel stacking the maximum torque can be doubled. The minimum torque setting is then approx. 50% of the maximum value.

For product no. 612 320 00 to 612 400 00 the specified torque can be tripled by the addition of a (third) spring washer. The minimum torque setting is then approx. 65% of the maximum value.

For Product No. 612 360 00 to 612 400 00 this requires a special adjusting nut, and the pressure plate has to be shortened (both against surcharge).

* The max. permissible speeds can differ for each size.
The max. permissible torques depend on the speed and working angle.
See details and notes on the product pages.

Bellocs Page 415

Universal Joints, General Information

Universal joints and universal shafts are today, and will be in future, absolutely essential and versatile components for transferring rotary motion and transmitting torque from the driving to the driven unit.

If two shafts set at a certain angle are connected using a single universal joint and one shaft turns with constant velocity, the other shaft will move irregularly. This non-uniformity – also called gimbal error – means that angle of rotation of the second shaft slightly lags behind or leads the movement of the first shaft, with kind of sinus-shaped variations. The greater the oper-

ating angle α , the greater the non-uniformity in motion of the second shaft.

Thus single universal joints are only used in applications where non-uniformity of rotation is acceptable. This non-uniformity can be compensated by either using two single universal joints in sequence - thus forming a universal shaft - or by using a double universal joint. When properly installed, the second universal joint can compensate the non-uniform rotation of the first universal joint, that is under the following preconditions, as described in DIN 808:

- 1. Correct yoke orientation:** when two single universal joints are used, please make sure that the yokes of the inbound joints, or brackets for the bracket-version, are properly aligned – as for double universal joints.

CORRECT: yoke orientation properly aligned

INCORRECT: yoke orientation offset by 90°

- 2. The operating angle must be the same at both ends.**

CORRECT : angle α is the same everywhere

INCORRECT: angle α and β are different

- 3. When position of driving and driven shaft is changed, they must always be moved in parallel.**

CORRECT : axis 1 is parallel to axis 2

INCORRECT: axis 1 is not parallel to axis 2

- 4. The universal-joint shaft – or the double universal joint – should be supported as close as possible to the universal joints.**

CORRECT : bearing positioned as close as possible

INCORRECT: bearing positioned is too far off the joint

The universal joints are supplied without pinholes and split pins. The length of the split pin is determined by the outer diameter of the universal joint, i.e. the pin must be flush when inserted.

We recommend Split Pins accord. to DIN 1481.

Bore Ø	6	8	10	12	16	20	25	32	40	50
Pin Ø	2	3	4	5	6	8	10	12	14	16

Calculating the Size of the Universal Joint

When selecting the most suitable universal joint, the highest transmittable torque is not the only decisive figure. Other operation conditions such as shock load, angle ratios, speeds etc. also need to be considered. The adjoining diagram therefore helps to determine a first rough sizing for the universal joint, and shows the respective reference values.

The respective reference value for smaller operating angles under 10°, between 0° and 5°, is 25% higher.

For larger operating angles above 40° to 45° (maximum) we can only recommend manual operation.

Corrective Values Subject to the Operating Angle.

Lubrication / Maintenance of Universal Joints

Maintenance of universal joints is limited to adequate lubrication, which has to be carried out at intervals (depending on the application). For dusty work environments, universal joints should be protected with bellows. The bellows can be filled with grease. This renders the joints maintenance-free.

Bellows
page 415

Ball Joints GF made from Plastic

Material: Acetal, glass-fibre reinforced.

Temperature range: -30°C to +50°C.

Max. operating angle 35°. Dimensions according to DIN 808.

For the joining, taper pins, dowel pins or grooved pins can be used. The joints are maintenance-free and can therefore be used in difficult-to-access parts of the machine. Other advantages compared to steel are less weight, corrosion resistance and chemical resistance.

Telescopic Universal-Joint Shafts UW Made from Plastic and Brass

Material: Acetal (black).

Cross-pieces: Brass.

Joint faces are fitted with brass inserts, with 2 set screws per hub.

Temperature range: -20 °C to + 60 °C.

Ordering Details: e.g.: Product No. 630 811 00, Telescopic Universal-Joint Shaft UW, 5 mm Bore

Product-No.	B+0,03** mm	D+/-1 mm	L min. mm	L max. mm	Travel mm	L ₂ mm	Peak Torque Nm*	Weight g
630 811 00 ¹⁾	5,00	11,1	240	389	149	13,1	0,36	36
630 814 00 ¹⁾	5,00	14,3	300	484	184	15,7	0,85	58
630 817 00 ¹⁾	10,00	17,5	450	730	280	22,3	1,60	168
630 823 00 ²⁾	10,00	23,0	464	745	281	17,0	2,80	241
630 828 00 ²⁾	12,70	28,5	500	784	284	20,0	5,60	457
630 836 00 ²⁾	20,00	36,5	564	868	304	21,0	10,70	827

* The stated peak torque refers to Lmin. (telescope retracted).

The max. torque for extended telescope has to be determined empirically and subject to the respective application.

** Bore-reducing bushes see below.

¹⁾ Joint faces fitted with brass inserts with 2 set screws per hub.

²⁾ Joints only fitted with metal inserts, without set screws.

Note

Telescopic universal-joint shafts (teleshafts) made from plastic and brass are practical if the distance between driving and driven unit varies during operation, or if changes in components need to be compensated or if, simply, fast disconnection of a drive unit is required.

These teleshafts are designed for light duty. Precisely-drawn, square brass tubes, which can easily be shortened, serve as

means of transmission. The profiled parts eliminate any torsional play which may occur inside the bushes due to tolerances. To shorten the teleshafts, please always cut off the same length on either side.

Bore-Reducing Bushes for Further Bores at Telescopic Universal-Joint Shafts, Product No. 630 811 00 to 630 836 00

Material:

Product No. 622 302 05 up to 622 304 05 made from brass.

Product No. 622 303 05 up to 622 318 20 made from aluminium.

To guarantee an optimum shaft-hub connection, the bore-reducing bush should be used as follows:

"S" indicates the adjusting screw inside the adjusting-screw hub.

"T" indicates tangential attachment screws for the clamping hub.

"F" indicates the recommended positioning of the flattened shaft with adjusting-screw hubs.

Ordering Details: e.g.: Product No. 622 302 05, Bore-Reducing Bush, 2 mm Bore

Product No.	Matching Universal-Joint Shafts	Bore B+0,03 mm	L mm	D mm	Weight g	Product No.	Matching Universal-Joint Shafts	Bore B+0,03 mm	L mm	D mm	Weight g

622 305 10	630 817 00	5	8,1	10	1	622 312 20	630 836 00	12	20	20	6
622 306 10	630 817 00	6	8,1	10	1	622 314 20	630 836 00	14	20	20	6
622 308 10	630 817 00	8	8,1	10	1	622 315 20	630 836 00	15	20	20	6
622 304 10	630 823 00	4	8,1	10	1	622 316 20	630 836 00	16	20	20	6
622 305 10	630 823 00	5	8,1	10	1	622 318 20	630 836 00	18	20	20	6
622 306 10	630 823 00	6	8,1	10	1						
622 308 10	630 823 00	8	8,1	10	1						

Please note that concentricity and constant velocity can be influenced by mounted bushes. To achieve the best possible performance, we recommend using shafts of tolerance class h6. Undersized shafts are less effective. For the same reason we would

not recommend using flattened shafts with more than 1/4 of the diameter removed.

Single Universal Joints WEL Similar to DIN 808

Material: Steel.

Max. Operating Angle 45°.

These low-price, single universal joints are especially suited for manual operation at low torques. As the contact surfaces are not hardened/ground, they can only be used at high speeds for short intervals.

Precision Universal Joints Similar to DIN 808

These single and double universal joints feature a simple design with very small tolerances and high precision and performance. A special grinding process realizes a perfect parallelism of the axes and the single parts of the joints - this guarantees an extremely long service life. All contact surfaces are hardened,

ground and lapped. These universal joints are used at high torques and high speeds up to max. 800 min⁻¹.

Precision Universal Joints Similar to DIN 808 Stainless Steel 1.4301 (X5CrNi1810)

These single and double universal joints feature a simple design with very small tolerances and high precision and performance. These universal joints can be used at speeds up to max. 800 min⁻¹. The torques of the stainless precision universal joints amount less of the standard steel version.

At an operating angle of 45° only manual operation is possible.

Single Precision Universal Joints WER Similar to DIN 808, Stainless

Material: Stainless steel 1.4301.

Max. Operating Angle 45°.

The cardan joints KE are, other than the cardan joints with needle-roller bearing, only sliding-contact bearings. Their scope of application is therefore limited to slow running drives. The respective maximum speeds depend on operating angle and load, but must never exceed 1000 min⁻¹. The maximum torque values listed in the table are limits, which must neither be exceeded. They may only be used to their full extend with intermittent operation or at low speed.

The following limit applies:

The product of speed (min⁻¹) x working angle (degrees) may not exceed the reference number 500. This means, e.g., for a working angle of 10 degrees a max. speed of 50 min⁻¹. If, however, the maximum torque is not taken to the limit, speed and working angle can be larger. At 0.5 x max. torque applies: speed x working angle, smaller or equal 4.000. In case of doubt choose larger joint.

At continuous operation the cardan joints need to be sufficiently lubricated. If no drip-feed lubrication is possible (drip-feed lubricators see page 525-526), lubricate the joints at least once a day. Another possibility is to cover the joints with a bellow, filled with a suitable lubricant.

Precision Single Universal Joints AR DIN 808

Material: Steel 11SMnPb30.

Max. Operating Angle 45°.

In their connecting dimensions, these universal joints comply with DIN 808. Their load capacity surpasses the performance required according to the DIN standard. The constructive features indicate that with extreme loads, e.g., shock or vibration loads, these joints should not be used.

Ordering Details: e.g.: Product No. 631 016 00, Universal Joint AR, 6 mm Bore

When pin holes are bored, do not bore through brackets. Pin holes can therefore only be positioned between brackets. Feather-key grooves can also only be machined between brackets, i.e. the keyways have to be cut offset by 90° to the brackets.

The joints must not be shortened. The outer part of the joints is a thin-walled sleeve, which is pressed onto the carrier and the brackets. This sleeve gives the brackets additional support.

Ball Joints RW

Material: Steel 11SMnPb37.

Max. Operating Angle 35°.

Temperature range: -70°C to +160°C.

Bellocs
page 415

The ball joints RW are simple, sliding-contact bearing elements and can only be used at low speeds. The respective maximum speeds depend on operating angle and load, but should possibly not exceed 500 min⁻¹. The maximum torque values listed in the table are limits, which must also never be exceeded. They may only be used to their full extend with intermittent operation or at low speed and small operating angle. Can be used from -70° to +160°C.

The following limit applies:

The product of speed (min⁻¹) x working angle (degrees) must not exceed the reference number 500. This means, e.g., for a working angle of 10 degrees a max. speed of 50 min⁻¹. If however the maximum torque is not used to the limit, speed and working angle can be larger. At 0.5 x max. torque applies: speed x working angle, smaller or equal 4.000. In case of doubt choose larger joint. Lubrication see car-dan joints KE page 412.

Slip shafts LW with ball joints

Material: Steel 11SMnPb37.

Max. operating angle per joint 35°.

With ball joints RW for power transmission in applications where longitudinal displacement occurs. The variation in length is effected with a multiple-spline shaft. Torques as for ball joints RW.

Other lengths on request.

Temperature range: -70°C to +160°C.

Bellows FSG (black) for Single-Universal Joints

Material: NBR, black. Hardness about 45 Shore A.
 Mineral-oil resistant.

Single-fold bellows are used to protect ball and universal joints.
 The shaft lengths L₁ and L₂ are estimated dimensions.

To securely fix the bellows on the joints, the connections should be fixed with hose fittings.

Ordering Details: e.g.: Product No. 630 516 00, Bellows FSG, inside diameter 16 mm

Product No.	Inside-Ø D mm	L mm	d ₂ mm	L ₁ mm	L ₂ mm	Weight g

Thermoplastic Pillow Block Bearings igubal® KSTM, connection measures like DIN 12240-4 (DIN 648) series K

Material spherical ball: iglidur® W300, yellowish.

Material housing: igumid G, black.

- Maintenance-free, silent running and anti-vibrating.
- High strength at very low weight.
- Resistant against corrosion and many chemicals.
- Electrical and thermal isolating.
- The shaft must rotate inside the bore of the spherical ball. With a metal shaft, a sliding speed up to 30 m/min. may be possible. The spherical ball may only compensate shaft misalignment.

Temperature range: -30° to +80°C.

Ordering Details: e.g.: Product No. 620 550 05, Pillow Block igubal KSTM, 5mm

Product No. KSTM	d ₁ ^{E10} mm	h ₁ mm	h ₂ mm	b ₁ mm	b ₂ mm	a mm	m mm	c mm	d ₆ mm	Load Rating radial* static N	Load Rating axial static N	Tilting angle α °	Weight g

* At short term, the radial load may be twice as high.

Other versions or sizes on request.

Thermoplastic Pillow Block Bearings igubal® ESTM, connection measures like DIN 12240-4 (DIN 648) series E

Material spherical ball: iglidur® W300, yellowish.

Material housing: igumid G, black.

- Maintenance-free, silent running and anti-vibrating.
- High strength at very low weight.
- Resistant against corrosion and many chemicals.
- Electrical and thermal isolating.
- The shaft must rotate inside the bore of the spherical ball. With a metal shaft, a sliding speed up to 30 m/min. may be possible. The spherical ball may only compensate shaft misalignment.

Temperature range: -30° to +80°C.

Thermoplastic Flange Bearings igubal® EFSM, with 4 Mounting Holes

Material spherical ball: iglidur® W300, yellowish.

Material housing: igumid G, black.

- Maintenance-free, silent running and anti-vibrating.
- High strength at very low weight.
- Resistant against corrosion and many chemicals.
- Electrical and thermal isolating.
- The shaft must rotate inside the bore of the spherical ball. With a metal shaft, a sliding speed up to 30 m/min. may be possible. The spherical ball may only compensate shaft misalignment.

Temperature range: -30° to +80°C.

Technical Explanations for Ball Pillow Block Bearings and Ball Flange Bearings on Page 426

Bearings:	The inside diameters correspond with the standard dimensions of the 6200 series bearings. The outer ring is spherical and allows an angular misalignment of +/- 2°.	Maintenance:	Due to the perfect sealing, all bearing types are usually maintenance free. In special application they can, however be relubricated. See lubrication.
Housings:	The one-part housings are made from massive grey cast iron and the two-part ones are drawn from steel sheet. The grey cast iron housings are that rigidly built, that the full load capacity of the bearing can be used.	Temperatures:	Bearings and housings made from cast or steel sheet can be used in continuous operation from -30°C to +100°C. Bearings for higher temperatures on request.
Materials:	Only high-quality materials are used for housing bearing, housing and all other components. Bearing: Bearing steel 100Cr6 Cast housing: GGL20 DIN 1691 Sheet-metal housing: St10-03 DIN 1623 Seal: synth. nitrile rubber (NBR)	Mounting on the shaft:	The housing bearings are supplied with longer inner ring and adjusting screw. The fixation on the shaft depends on the effective axial shifting force of the inner ring. The stability mainly depends on the quality and the tolerance zone of of the shaft. To facilitate the assembly, the inner rings are - other than the norm - produced with a plus tolerance.
Sealing:	All housing bearings are supplied with an efficient, heat and oil resistant rubber seal. The constructive design of the seal varies with the different bearing types.		

Tolerances of roller bearings:

Nominal Ø of Bore d ^{H7} mm	Tol. of Bore d µm	Inner Ring Bi µm	Nominal Ø of Outer Rings D mm	Outer Rings D µm
10 - 18	+ 18 0	0 - 120	50 - 80	0 - 13
18 - 30	+ 21 0	0 - 120	80 - 120	0 - 15
30 - 50	+ 25 0	0 - 120	120 - 150	0 - 18

Tolerances of Cast Housings according to DIN 1686:

Nominal Ø of Bore d mm	P h mm	F i mm	Tolerances of the Connecting Dimensions		
			FL FA e mm	k mm	T e mm
12 - 50	± 0,15	± 0,5	± 0,7	+ 0,2	- 0,5

Lubrication:

All housing bearings are filled with a high-grade lithium-soap grease. In most mounting situations this lubricant-filling guarantees maintenance-free operation. In especially robust operating conditions with higher loads, speeds, temperatures, dirt etc. relubricating at shorter intervals may be required, depending on the application.

For relubrication we recommend using lithium-based grease. Under no circumstances use soda saponification.

Load bearing rating: The radial static and dynamic load bearing ratings are stated at the individual bearings (axial = 20% of radial).

Speed and load: The permissible speed is directly connected to the load and the play at bearing bore and shaft diameter.

Ball Pillow Block Bearings TUCP, Thermoplastic Housing with Stainless Steel Bearing

Material: Housing: Thermoplast PBT, on choice black or white.

Rolling bearing: Stainless steel 1.4125 (X105CrMo17, AISI 440 C).

The rolling bearing can be swiveled when mounting to compensate shaft misalignment. The shaft will get fastened with 2 setscrews. Lubricated for life at normal operating conditions. Re-lubricating is possible.

Delivery with stainless steel grease nipple.

Protection Caps for Thermoplastic Pillow Bearings TUCP, TUCF and TUCFL

Material: Thermoplast PBT, on choice black or white.

Open Design with sealing for shaft side or closed design.

The caps fit only on the one bearing side with the setscrews. They can get clipped on by hand by the customer.

Ordering Details: e.g.: Product No. 625 552 20, Protection Cap, black, Open Design, for Bearing Size 204

* Maximum radial load if axial force = 0. Regard the housing load. The axial load rating is approx. 20% of the radial load rating.

Ball Flange Bearings UCF (Grey Cast Iron)

Material: Housing from grey cast iron.
Rolling bearing from bearing steel.

With 4 mounting holes.

The rolling bearing can be swiveled when mounting to compensate shaft misalignment. The shaft will get fastened with 2 setscrews. Lubricated for life at normal operating conditions. Re-lubricating is possible.

Technical explanations page 423.

Delivery with grease nipple.

* Maximum radial load if axial force = 0.
The axial load rating is approx. 20% of the radial load rating.

Ball Flange Bearings SSBPF, Two-Part Steel Sheet, Stainless Steel

Material: Housing from two-part sheets: Stainless steel 1.4305 (X5CrNi18-10, AISI 304). Rolling bearing: Stainless steel 1.4125 (X105CrMo17, AISI 440 C).

STAINLESS

With 3 mounting holes. The rolling bearing can be swiveled when mounting to compensate shaft misalignment. The shaft will get fastened with 2 setscrews. Lubricated for life at normal operating conditions. Re-lubricating is not possible.

Ordering Details: e.g.: Product No. 626 994 12, Ball Flange Bearing SSBPF 201

Pillow Block Bearing Units BK, for Fixed Side

Material: Housing from steel, all surfaces machined, burnished. On request: nickel plated. Rolling bearing from bearing steel.
Ready-to-install housing bearing unit for trapezoidal and ballscrew spindle drives, for the fixed side. With two angular contact ball bearings, lightly preloaded, with seals. With 8 mounting holes.

Locknut and distance bushes are included. Due to the standard dimensions, these units can also replace parts of other suppliers.
Spindle reworking on request (see page 435).
Matching counterpart for support side: Pillow Block Bearing BF.

Shaft Reworking and Bearing Load Data for Spindle Bearing Units BK, EK and FK (Fixed Side)

Shaft Reworking:

At **MÄDLER**[®], trapezoidal and ballscrew spindles can get reworked, fitting to the bearing units. The spindle reworking in the drawing is just a recommendation. Due to the customer's request, the length L_5 could be shorter or longer and the shaft end could get a keyway DIN 6885.

Bearing Load Data:

The loading rates and speed limits shown in the table are the limits just for the bearings. The limits of the spindles are much lower, depending on the diameter, length and material.

Recommended Shaft Reworking for Fixed Side Units

¹⁾ The retaining ring DIN 471 is included in the scope of delivery of bearing units BF, EF and FF.

* A rest of the thread grooves may remain visible.

Single Row Deep Groove Ball Bearings SKF®, inner diameter 3 - 17 mm

Material: Bearing steel.

- Standard ball bearings in premium-quality.
- Most common bearing type.
- Usable for high speed.
- Insensitive in use and maintenance.
- On choice: Open, with friction-free metal shields 2Z (= ZZ) or with contacting rubber NBR seals 2RS1 / 2RSH.

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or other bearing types on request.

* Fatigue load limit.

Single Row Deep Groove Ball Bearings **MÄDLER**[®], inner diameter 3 - 17 mm

Material: Bearing steel.

- Standard ball bearings in high quality.
- Most common bearing type.
- Usable for high speed.
- Insensitive in use and maintenance.
- On choice: With friction-free metal shields ZZ (= 2Z)
or with contacting rubber seals 2RS.

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or other bearing types on request.

Angular Contact Ball Bearings SKF®, Single Row, inner diameter 10 - 30 mm

Material: Bearing steel.

- Angular contact ball bearings in premium-quality.
- For common axial and radial load.
- Usable for high speed.
- Basic version for one bearing per bearing point (shaft end).
- A second bearing point (opposite bearing) is required.

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or sizes on request.

Supplementary designations:

B = 40° contact angle.

E = Optimized internal design.

P = Injection moulded window-type cage of glass fibre reinforced polyamide 66, ball centred.

* Fatigue load limit.

Self Aligning Ball Bearings SKF®, Double Row, inner diameter 10 - 50 mm

Material: Bearing steel.

- Self aligning ball bearings in premium-quality.
- For middle-high, common axial and radial load.
- Usable at angular displacement.
- Usable for high speed.

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or sizes on request.

Supplementary designations:

E = Optimized internal design.

TN9 = Injection moulded snap-type cage of glass fibre reinforced polyamide 66, ball centred

2RS1 = Sheet steel reinforced contact seal of acrylonitrile-butadiene rubber (NBR) on both sides.

* Max. disalignment.

** Fatigue load limit.

Cylindrical Roller Bearings SKF®, Single Row, inner diameter 15 - 50 mm

Material: Bearing steel.

- Cylindrical roller bearings in premium-quality.
- For high radial load.
- Displaceable in both directions (type NU) or in one direction (Type NJ).
- Usable for high speed, with groove and 3 lubrication holes.
- Easy to mount (the inner ring is loose).

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or sizes on request.

Supplementary designations:

EC = Optimized internal design.

P = Injection moulded window-type cage of glass fibre reinforced polyamide 66, ball centred.

* Max. displacement from the middle.

** Fatigue load limit.

Spherical Roller Bearings SKF®, Double Row, inner diameter 25 - 50 mm

Material: Bearing steel.

- Spherical roller bearings in premium-quality.
- For very high radial load and common high axial load in both directions.
- Usable at angular displacement.
- Usable for high speed, with groove and 3 lubrication holes.

Temperature range: -30°C to +150°C (for short time up to +200°C).

Other versions or sizes on request.

Supplementary designations:

E = Two pressed window-type steel cages, flangeless inner ring and guide ring centred on the inner ring.

* Max. disalignment.

** Fatigue load limit.

Tapered Roller Bearings SKF®, Single Row, inner diameter 15 - 50 mm

Material: Bearing steel.

- Tapered roller bearings in premium-quality.
- For common axial and radial load.
- Usable for low speed to middle speed.
- Easy to mount (the outer ring is loose).

Temperature range: -30°C to +90°C (for short time up to +110°C).

Other versions or sizes on request.

Radial Shaft Seals Design A, for Shaft Diameter 6 to 30 mm

Material:: Elastomer: NBR.

Stiffening ring and tension spring from steel.

- According to DIN 3760 Design A respectively ISO 6194-1 figure 1 and in many additional sizes.
- Most common design, with one seal lip.
- For oil- and grease-lubricated applications.
- For high speed, sliding speed up to 14m/s.

Recommended tolerances: Housing bore H8, shaft-Ø h11,

Shaft roughness R_a 0.2 to 0.8 μm .

Temperature range: -40°C to +100°C (for short time up to +120°C).

Radial Shaft Seals Design A, for Shaft Diameter 32 to 50 mm

Material:: Elastomer: NBR.

Stiffening ring and tension spring from steel.

- According to DIN 3760 Design A respectively ISO 6194-1 figure 1 and in many additional sizes.
- Most common design, with one seal lip.
- For oil- and grease-lubricated applications.
- For high speed, sliding speed up to 14m/s.

Recommended tolerances: Housing bore H8, shaft-Ø h11,

Shaft roughness R_a 0.2 to 0.8 μm .

Temperature range: -40°C to +100°C (for short time up to +120°C).

Other sizes and types on request.

Bushes, Design J Similar to DIN 1850 (DIN 4379 Version C) Made from Sintered Bronze

Self lubricating, oil coated, pressed ready-to-install and ¹⁾ kalibrated. After press-fitting them into a rigid bearing housing with a mounting hole H7, these bearings have a bore of H7.

Edges chamfered at 45°, at choice of the manufacturer.

The concentricity tolerance refers to d_2 .

¹⁾ no statement regarding the surface roughness according to DIN 3141 (prenorm) can be given due to the porous structure of the sintered metal.

Construction

Tin-plated steel back (incl. edges). Multi-porous bronze layer, sliding surface PTFE-lead-compound.

Technical data

Stat. surface pressure	max. 250 N/mm ²
Dyn. bearing load	max. 56 N/mm ²
Friction coefficient	von 0.03 - 0.20
Sliding speed	max. 2 m/s
Temperature range	-195°C to + 280°C
Therm. conductivity	40 W/K · m

Recommended mounting tolerances

Housing bore H7, shaft tolerance up to 55 Ø f7 above 55 Ø h8

Paired contact surface

Recommended: hardened contact surfaces with a surface roughness of R_z3 and finer.

Main characteristics

Self lubricating and maintenance free, ready to install. Perfectly suited for lower sliding speeds. Low wear, low friction coefficient, no „stick slip“. Perfectly suited for circular, swivelling and partly for axial movement. Can be used at extremely high bearing loads. No moisture absorption. High corrosion resistance.

Flange Bushes, Slotted (Without Any Lubrication)

Plain bearing flange bush from steel sheet with multi-porous bronze layer and sliding surface from PTFE-lead-compound. Specially suited for lubrication-free running, for high loads, extrem temperatures.

624 122 20	22 x 25 / 32 x 21,5	21,0
624 125 25	25 x 28 / 35 x 26,5	27,3
624 130 30	30 x 34 / 42 x 30	53,3
624 135 20	35 x 39 / 47 x 26	46,0
624 135 40	35 x 39 / 47 x 40	81,4
624 140 40	40 x 44 / 53 x 26	92,0
624 150 40	50 x 55 / 60 x 22	145,8

Note:

According to DIN ISO 3547 the supplied bush may be unround and with open slot. After pressing the slotted bush into an H7-bore, it usually is round and the gap (the slot) is closed.

Loctite bonding products (bearing adhesive) page 812.

Mounting instructions

The edges of the mounting hole must be rounded or chamfered. We recommend using an arbor press for mounting. The gliding surface must not be damaged. The butt joint must be located opposite the load area. Once mounted the bearing has pressfit. Glueing is possible, but not necessary.

Application range

Where no lubrication is possible: textile machinery, controls and instruments, packing plants, electronic goods, medical equipment, paper machines, food-processing machines, brake and pump manufacturing, etc.

Where lubrication is often neglected:

agricultural and construction machinery, fork lift trucks, etc.

Where lubricants should be used sparingly:

car and motorbike manufacture, machine tool building, conveyor plants, escalator manufacture, hoisting devices, turbine manufacturing, steel construction for hydraulic engineering, etc.

Service life

The service life of the bearing depends on ambient conditions as: sliding speed, load, temperature, on-time, paired contact surface, etc. For lower wear, please regard the load and mounting instructions above, and protect the bearing from corrosive influences and large amounts of dirt.

Bushes BP, Polyamide 6.6 Die Cast

Plain bearing bush from low cost thermoplast. Low friction. Specially suited for simpler applications at normal temperatures.

Description and technical data

Material: Thermoplastic polyamide 6.6.

- Low cost.
- Low friction, suitable for lubrication-free running.
- High moisture absorption, low dimension stability.

Typical for polyamide parts is the high moisture absorption. But if the bushes and flange bushings are conditioned, i.e. saturated with moisture before mounting, then usually dimensional changes due to the degree of moisture play a much smaller role than dimensional changes due to temperature.

Technical data:

Surface pressure max.: 18 N/mm², dependant on sliding speed and bearing temperature
 Sliding Speed: 2 m/s
 Lubrication: usually not required
 Bearing clearance: about 0.01 mm per mm shaft-Ø
 Bearing temperature: -40°C up to +80°C.
 Coefficient of linear expansion: 8 x 10⁻⁵
 Moisture absorption max.: 7.5%
 Moisture absorption at 20°C and 50% rel. humidity: 2.4%

Mounting hole: tolerance H7.

Plain Bearings, Thermoplastic EP22™

Plain bearing bush made from thermoplastic with high dimension accuracy. Low friction. Specially suited for dry-running and for use at very low up to middle high temperatures. Colour: white.

Flanged Plain Bearings, Thermoplastic EP22™

Plain bearing flange bush from thermoplastic with high dimension accuracy. Low friction. Specially suited for dry-running and for use at very low up to middle high temperatures. Colour: white.

Ordering Details: e.g.: Product No. 627 308 05, Flange Bush EP22, 8 mm Bore

* After press-fitting in bore H7 (in toleranc center).

Description and technical data

Material: Thermoplast polybutylenterephthalat, modified (PBT + PTFE), white.

- Good price/performance ratio with high dimension accuracy
- Low friction, suitable also for lubrication-free running.
- Low Temperatures suited until -50°C.

Operating Conditions :

dry : very good.

oiled: good.

water: very good.

Field of application:

Domestic appliances, chemical equipment, office equipment, sports equipment, automotive (pedals, steering, axes), ...

Technical data:

Surface pressure:	max. 50 N/mm ² .
Sliding Speed:	max. 1,0 m/s.
pv-value for A _H /AC=5	0,05 N/mm ² x m/s.
pv-value for A _H /AC=10	0,10 N/mm ² x m/s.
pv-value for A _H /AC=20	0,20 N/mm ² x m/s.
Temperature range	-50°C to + 170°C.
Coefficient of friction	0,22 to 0,37 (dry).
Shaft surface finish	Ra 0,1 to 0,5 µm (ground).
Shaft hardness	> 200 HV.

Recommended mounting tolerances:

Housing bore H7, recommended shaft tolerance h9.

Plain Bearings, Thermoplastic EP43™

Plain bearing bush made from high sophisticated thermoplastic. Very low friction. Specially suited for dry-running and for use under water and at high temperatures. Colour: brown.

Description and technical data

Material: Thermoplast polyphenylensulfid, reinforced, modified (PPS + PTFE + aramid), brown.

- Good chemical and hydrolysis resistance.
- Low friction, optimised for dry running conditions.
- High dimensional stability.

Operating Conditions :

dry : very good.
oiled: good.
water: very good.

field of application:

Domestic appliances, conveyors, machinery, cash slot machines and many more.

Technical data:

Surface pressure.: max. 83 N/mm².
Sliding Speed: max. 1,0 m/s.
pv-value for A_H/AC=5 0,22 N/mm² x m/s.
pv-value for A_H/AC=10 0,90 N/mm² x m/s .
pv-value for A_H/AC=20 3,59 N/mm² x m/s .
Temperature range -40°C to + 240°C.
Coefficient of friction 0,11 to 0,20 (dry).
Shaft surface finish Ra 0,2 to 0,8 µm (ground).
Shaft hardness > 200 HV.

Recommended mounting tolerances:

Housing bore H7, recommended shaft tolerance h9.

Cylindrical Drill Bushes similar to the old Standard DIN 179, Design A

Material: up to bore 5.0 mm 1.2210 above 1.0718
Hardened, ground to tolerance inside and outside.

Hardness: 62 HRC.

Bore rounded at edge.

Mounting hole: tolerance H7.

Other dimensions and designs on request.

Ordering Details: e.g.: Product No. 622 204 08, Cylindrical Drill Bushes 4 x 8 mm

Shaft Collars with Set Screw (Adjusting Rings) According to the Old Standard DIN 703

Material: Steel, blank.
Steel, zinc-plated.

Heavy-duty series. With allen set screw made from steel / steel zinc-plated, like DIN EN ISO 4027, but strength 12.9. From size $d_1=70\text{mm}$ with 2 set screws, with offset 135° .

Blank turned and kalibrated. Bores tolerance H8.
Large chamfer on one side of the outside diameter.

Temperature range: -40°C to $+175^\circ\text{C}$.

Ordering Details: e.g.: Product No. 623 220 00,

* Size 20 is not part of the old standard DIN 703.

Other sizes and inch-sizes on request.

Shaft Collars with Set Screw (Adjusting Rings) DIN 705 A

Material: Steel, blank.
Steel, zinc-plated.
Stainless steel 1.4305.

Light-duty series. With set screw made from steel, steel zinc-plated or stainless steel. Up to size $d_1=70\text{mm}$ with one slotted screw, DIN EN 27434. From size $d_1=80\text{mm}$ with 2 allen screws like DIN EN ISO 4027, but strength 12.9, with offset 135° .

Blank turned and kalibrated. Bores tolerance H8. Large chamfer on one side of the outside diameter.

Temperature range: -40°C to $+175^\circ\text{C}$.

Shaft Collars, Clamp Collars Single-Split

Material: Steel C45 burnished. Screw steel 12.9.
Stainless steel 1.4301. Screw stainless steel A2-70.
Aluminium. Screw stainless steel A2-70.

Features: does not damage the shaft, stronger clamping force than with set collars, even distribution of clamping forces, easy readjustment, precision honed bores.
The threads of the screws DIN 912 are covered with a layer of nylon.

Tolerance b: +0.08 mm
-0.25 mm

Temperature range: -40°C to +175°C.

Remarks to collars from steel

The black oxide on the clamping collars is formulated as part of the total performance of the product. It enhances the holding ability of the collar, it efficiently reduces slipping on the shaft,

has anti-stick-slip characteristics and helps to keep the torque rating of the screw within its designed parameters. The oxide layer also provides corrosion protection.

Shaft Collars, Clamp Collars Double-Split

Shaft Collars, Clamp Collars Double Wide, Double-Split

Material: Steel C45 burnished, screws steel 12.9.
Stainless steel 1.4301,
screws stainless steel A2-70.

Features: does not damage the shaft, stronger clamping force than with set collars, even distribution of clamping forces, easy readjustment, precision honed bores.
The threads of the screws DIN 912 are covered with a layer of nylon.

Tolerance b: +0.08 mm
-0.25 mm

Temperature range: -40°C to +175°C.

Remarks to collars from steel

The black oxide on the clamping collars is formulated as part of the total performance of the product. It enhances the holding ability of the collar, it efficiently reduces slipping on the shaft,

has anti-stick-slip characteristics and helps to keep the torque rating of the screw within its designed parameters. The oxide layer also provides corrosion protection.

Shaft Collars, Clamp Collars with Thread

Material: Steel C45 burnished, screws steel 12.9.
Stainless steel 1.4301,
screws stainless steel A2-70.

The threads of the screws DIN 912 are covered with a layer of nylon.

Max. speed: 4,000 min⁻¹.

Temperature range: -40°C to +175°C.

Load Capacity of Rod Ends and Spherical Bearings made from steel

Radial load: The load rating depends on the load case:

Load case I (stationary or static load):
Load rating like table 1.

Load case II (fluctuating or simple dynamic load):
Load rating like table 2. Attention for types GT and GT-R:
Load ratings from table 1 may not be exceeded.

Load case III (alternating or shock load):

The load rating depends highly on the real kind of application and use. We recommend 50% of the load rating from table 2.

Axial load: The axial force may not exceed 20 % of the radial load.

Table 1: Static Load Rating C₀ in kN for Load Case I

* Attention: The static load rating is lower. The dynamic load ratings are calculated for the bearing, to be used for further calculations. The static load ratings from table 1 may not be exceeded.

Rod Ends and Spherical Bearings, Basic Informations

Permissible Speed of the Inner Ring for Rod Ends and Spherical Bearings made from steel

The effective determination of the maximum rotational speed depends on various factors and variables which cannot all be predefined by the manufacturer.

- Load.
- Loading case (I,II and III).
- Type of lubrication (central lubrication system etc.).
- Ambient temperature.
- Environmental influences (dust etc.).

For the aforementioned reasons the manufacturer cannot determine any explicit, general values for the maximum speed of the inner ring. The values in the table were calculated assuming favourable conditions. Rod ends DIN series E (GEW and GAW) and spherical bearings DIN series E (GE...DO and GE...UK) are not suitable for higher speeds (only for alternating load).

Rod End-Bores	Rod Ends			Spherical Bearings			
	GS min ⁻¹	GT** min ⁻¹	GT-R** min ⁻¹	S min ⁻¹	S...D** min ⁻¹	G min ⁻¹	G...D** min ⁻¹

40	290	100	100	290	150	290	100

* Sizes 2, 3 and 4 mm and GS external thread 5 mm are not suitable for higher speeds.

** Speeds stated are for short-term rotary operation (not suitable for permanent rotary operation).

Tolerances for Rod Ends and Spherical Bearings

Ball Bores

Series K:

Bore tolerance H7.

Matching shaft: g6 recommended.

Series E:

Bore tolerance 0/-8μ.

Matching shaft: g7 recommended.

Outer diameter of the spherical bearing

Series K: Tolerance h6.

Housing tolerance J7 recommended.

Series E: Tolerance h5.

Housing tolerance JS7 recommended.

Thread Metric thread according to DIN 13. All external thread are rolled for high strength.

Lubrication

All rod ends and spherical bearings, which are not declared as maintenance-free, must be lubricated. An initial lubrication before use is required. But maintenance-free parts must not be lubricated.

We recommend the following lubrication intervals:

- If the system runs at full speed during the phase of start-up wear, i.e., during the first 5 operating days, running 8 hours per day, and in a dirty operating environment, i.e., under unfavourable ambient conditions, the unit should be lubricated twice a day.

- With oscillating motion once to twice a week.

- With higher temperatures possibly once or twice a day.

We recommend high quality grease with Molykote or graphite ingredient.

Tilting Angle

Max. tilting angle: the tilting angles stated in the table relate to the maximum permissible misalignment of the shaft axis towards the bearing

Thermoplastic Rod Ends igubal® KCRM and KCLM similar to DIN 12240-4 (DIN 648) series K, Internal Thread

Material spherical ball: iglidur® W300, yellowish.

Material housing: igumid G, black.

- Maintenance-free, silent running and anti-vibrating.
 - High strength at very low weight.
 - Resistant against corrosion and many chemicals.
 - Electrical and thermal isolating.
 - The counter part must rotate inside the bore of the spherical ball.
- With a metal bolt, a sliding speed up to 30 m/min. may be possible.
The spherical ball may only compensate shaft misalignment.

Temperature range: -30° to +80°C.

IR = Internal Right-hand thread. **IL** = Internal Left-hand thread.

* At short term, the radial load may be twice as high.

Other versions or sizes on request.

Heavy-Duty Rod Ends GS DIN 12240-4 (DIN 648) Series K, Internal Thread

Material internal ring: Roller bearing steel 100Cr6, hardened HRC 62 ±1, ground and polished.
Material outer part: Bores 6-12 mm, free cutting steel, turned, bores 14-30 mm C22 forged, zinc-plated.
Material bearing race: Special brass CuZn40Al1.
Normal bearing clearance: 15 - 45 μ at a measuring load of 100 N.
 Sliding speeds up to 60 m/min. Steel on high-duty bronze, thus high radial and axial alternating loads.
 Load tables pages 459 - 460.

Initial lubrication before use is required!

IR = Internal-Right hand thread. IL = Internal Left-hand thread.

Heavy-Duty Rod Ends GS DIN 12240-4 (DIN 648) Series K, External Thread

Material internal ring: Roller bearing steel 100Cr6, hardened HRC 62 ±1, ground and polished.
Material outer part: Bores 6-12 mm, free cutting steel, turned, bores 14-30 mm C22 forged, zinc-plated.
Material bearing race: Special brass CuZn40Al1.
Normal bearing clearance: 15 - 45 μ at a measuring load of 100 N.
 Sliding speeds up to 60 m/min. Steel on high-duty bronze, thus high radial and axial alternating loads.
 Load tables pages 459 - 460.

Initial lubrication before use is required!

AR = External Right-hand thread. AL = External Left-hand thread.

Threaded bars with metric thread and fine thread page 510.

Loctite thread locking and bonding products page 811.

Rod Ends GEW DIN 12240-4 (DIN 648) Series E, Maintenance Free, Internal Thread

Material:

Housing: up to size 10 free cutting steel 9SMnPb28K, turned,
from size 12 heat-treated steel C45, forged.

Bearing: maintenance-free steel/PTFE bearing.

Tribological pairing: hard chrome - steel/PTFE

Tolerances and load tables page 459 - 460.

Application: For pivoting motions (alternating load).

Not for higher speeds.

IR = Internal Right-hand thread. IL = Internal Left-hand thread.

Rod Ends GAW DIN 12240-4 (DIN 648) Series E, Maintenance Free, External Thread

Material:

Housing: up to size 10 Free cutting steel 9SMnPb28K, turned,
from size 12 heat-treated steel C45, forged.

Bearing: maintenance-free steel/PTFE bearing.

Tribological pairing: hard chrome - steel/PTFE.

Tolerances and load tables page 459 - 460.

Application: For pivoting motions (alternating load).

Not for higher speeds.

AR = External Right-hand thread. AL = External Left-hand thread.

Ordering Details: e.g.: Product No. 634 606 00, Rod End GAW, ER

Heavy-Duty Rod Ends BR with Spherical Bearing DIN 12240-4 (DIN 648) Series K, Internal Thread

Material rod end: Alloyed, case-hardened steel (forged piece) quenched and tempered, bearing race hardened, ground and lapped. Thread rolled/cut, surface zinc-plated and chromatised.
Material inner ring: Bearing steel hardened, precisely honed.
Lubricant: Calcium-complex grease (-20°C to +120°C).
 If required special lubricants.

Rod end with low friction ball bearing, long-term lubricated, sealed with cover plates, with high load rating.

IR = Internal Right-hand thread. **IL** = Internal Left-hand thread.

Inner Rings - Tolerances DIN 620

Nominal dimension range of the bore d ₁ mm		Tolerance in μm	
above	up to	min.	max.
0,6	2,5	-8	+1
2,5	10	-8	+1
10	18	-8	+1
18	30	-9	+1
30	50	-11	+1

Rough Calculation for Rod Ends/Ball Bearing Type

- β = half the pivoting angle in °
- C = dynamic load rating in N
- C₀ = static load rating in N
- F_a = axial load in N (F_a ≤ 0.2 F_r)
- F_r = radial load in N
- n = speed or pivoting frequency in min⁻¹
- P = dynamic equivalent radial load in N
(for self-aligning ball bearing P = F_r + Y · F_a)
(for self-aligning roller bearing P = F_r + 9.5 · F_a)
- P₀ = Static equivalent radial load in N
(for self-aligning ball bearing P₀ = F_r + Y₀ · F_a)
(for self-aligning roller bearing P₀ = F_r + 5 · F_a)
- Y = axial factor, dynamic
- Y₀ = axial factor, static

Nominal Service Life L_n (n)

Rotating:

$$L_{hrot} = 10^6 \left(\frac{C}{P} \right)^z \frac{1}{60 \cdot n} \text{ [h]}$$

Oscillating:

$$L_{hosz.} = 10^6 \frac{\left(\frac{C}{P \sqrt[3]{\frac{\beta}{90}}} \right)^z}{60 \cdot n} \text{ [h]}$$

z = 3 for self-aligning ball bearing
z = 3.33 for self-aligning roller bearing

Conditions:

Pivoting angle β ≥ 3°
For pivoting angle β < 3° we recommend the use of rod ends with slide bearings.

Static load

stationary:

$$P_0 \leq C_0 \text{ [N]}$$

Spherical Bearings Series K, Steel or Stainless Steel, re-lubricateable

Material standard: Inner ring bearing steel 100Cr6, hardened, ground and polished. Bearing shell special bronze CuSn8.

Material stainless: Inner ring stainless steel 1.4034, hardened, ground and polished. Bearing shell special bronze CuSn8.

- DIN 12240-1 (DIN 648), series K (wide shape).
- Re-lubricateable (from size 6 with lubrication hole).
- Initial lubrication before use is required.
- Suitable for higher speeds.
- Without additional outer ring.

Ordering Details: e.g.: Product No. 633 205 00, Spherical Bearing, Series K, Steel, re-lubricateable, 5mm

Spherical Bearings Series K, Steel or Stainless Steel, re-lubricateable, with Outer Ring

Material standard: Inner ring bearing steel 100Cr6, hardened, ground and polished. Bearing shell special bronze CuSn8. Outer ring steel 9SMnPb28K, zinc plated.

Material stainless: Inner ring stainless steel 1.4034, hardened, ground and polished. Bearing shell special bronze CuSn8. Outer ring stainless steel 1.4305.

- DIN 12240-1 (DIN 648), series K (wide shape).
- Re-lubricateable, initial lubrication before use is required.
- Suitable for higher speeds.
- With additional outer ring.

Ordering Details: e.g.: Product No. 633 005 00, Spherical Bearing, Series K, Steel, re-lubricateable, with Outer Ring, 5mm

Spherical Bearings Series K, Steel or Stainless Steel, maintenance-free

Material standard: Inner ring bearing steel 100Cr6, hardened, ground and polished. Bearing shell steel 9SMnPb28K, zinc plated, with PTFE-lining.

Material stainless: Inner ring stainless steel 1.4034, hardened, ground and polished. Bearing shell stainless steel 1.4571, with PTFE-lining.

- DIN 12240-1 (DIN 648), series K (wide shape).
- Maintenance-free.
- Suitable for high dynamic loads.
- Without additional outer ring.

Spherical Bearings Series E, Steel, re-lubricateable

Material: Inner ring and bearing shell from bearing steel 100Cr6, hardened, ground and phosphated. Treated with molybdenum disulfide. Bearing shell (outer ring) cut.

- DIN 12240-1 (DIN 648), series E (slim shape).
- Re-lubricateable (from size 15 with lubrication hole).
- Initial lubrication before use is required.
- Suitable for high, alternating loads.
- Sliding speed up to 60 m/min.

Ordering Details: e.g.: Product No. 633 606 00, Spherical Bearing, Series E, re-lubricateable, 6mm

Spherical Bearings Series E, Steel or Stainless Steel, maintenance-free

Material standard: Inner ring bearing steel 100Cr6, hardened, ground, polished and hard chromed. Bearing shell from bearing steel, 100Cr6 with PTFE-lining. From size 35 in 2RS-version (sealed on both sides).

Material stainless: Inner ring stainless steel 1.4125 (from size 45 stainless steel 1.4112), hardened, ground and polished. Bearing shell stainless steel 1.4571, with PTFE-lining.

- DIN 12240-1 (DIN 648), series E (slim shape).
- Maintenance-free.
- Suitable for high unidirectional load.
- Sliding speed up to 10 m/min.

Ordering Details: e.g.: Product No. 633 706 00, Spherical Bearing, Series E, maintenance-free, 6mm

Sealing Cap for Angle Joints DIN 71802

Material: Neoprene.

The sealing caps have delivered an optimal performance used with joints in very dirty or dusty environment. They also offer good protection against spray water and steam. Temperature range: -30°C to +110°C (short term 140°C).

Precision Shaft Steel with Shaft Support, Low Version

Material shaft: Steel 1.1213 (Cf53), hardened and ground, hardness 62 ± 2 HRC, diameter tolerance ISO h6.

Material support: Extruded aluminium.

Length: Either 600 mm or 1200 mm.
Delivery without mounting screws.

Ordering Details: e.g.: Product No. 647 412 05, Shaft with Support, Low Version, \varnothing 12 mm, Length 600 mm

Ready-to-install, supported linear shafts to be used with open linear bearings or open linear bearing units. The shafts are supported over the entire length. Unit can be shortened by the customer using an angle grinder. The shaft supports have internal threads to get mounted from the downside of the customer's base plate. The required screw length depends also on the thickness of the base plate. Longer versions on request.

Linear Bearings KB-1 ISO Series 1

Linear bearings Series 1 of ISO standard 10285 from premium brand in top quality.

Especially compact dimensions enable a space-saving and cost efficient linear support. Easy to mount and provide automatic retention in the mounting bore. I.e., if the boring in the housing

Ordering Details: e.g.: Product No. 646 003 03, Linear Bearing KB-1, Internal Ø 3 mm, with Shields

is exact, the bearing does not to be secured axially. Either with integral double-lip seal or with shields. Bearings up to FW 5mm must be lubricated before use.

All other bearings are lubricated ready-to-install.

Recommended shaft tolerance h6, housing tolerance H6 or JS6.

Linear Bearings KB-1 ISO Series 1, Economy-Line

Linear bearings from reliable brand in good quality at low price. These linear bearings can be fitted inside a customer's housing or as spare parts for our closed Economy-Line units.

These bearings are self-aligning up to +/- 0,5°. All bearings must be lubricated before use. Recommended shaft tolerance h6, housing tolerance H6 or JS6.

With wiping double-lip seals.

Linear Bearings Units KG-1 ISO Series 1, Economy-Line, with a Linear Bearing

Material: Housing made from extruded aluminium with a compact linear bearing of the ISO Series 1. From reliable brand in good quality at low price. With integral double-lip seal.

All bearings are lubricated ready-to-install. Recommended shaft tolerance h6.

Linear Bearings KB-1 ISO Series 1, Stainless

Stainless linear bearings Series 1 of ISO standard 10285 from premium brand in top quality.

Especially compact dimensions enable a space-saving and cost efficient linear support. Easy to mount and provide automatic retention in the mounting bore. I.e., if the boring in the housing

is exact, the bearing does not to be secured axially. Either with integral double-lip seal or with shields. Bearings up to FW 5mm must be lubricated before use.

All other bearings are lubricated ready-to-install.

Recommended shaft tolerance h6, housing tolerance H6 or JS6.

Linear Bearings KB-3 ISO Series 3, Closed Design

Linear bearings series 3 of ISO standard 10285 from premium brand in top quality.

High load-bearing capacity, due to the asymmetric position of the rows of balls and the specially shaped raceway segments. These linear bearings can be fitted inside a closed or open housing and are thus adjustable.

With shields or wiping double-lip seals.

Bearings with FW 5mm must be lubricated before use. All other bearings are lubricated ready-to-install.

Recommended shaft tolerance h6, housing tolerance H6 or JS6. Stainless version on request.

Ordering Details: e.g.: Product No. 646 005 00, Linear Bearing KB-3, Internal Ø 5 mm, with Shields

Linear Bearings KB-3-A ISO Series 3, Self-Aligning, Closed Design

Self-aligning linear bearings series 3 of ISO standard 10285 from premium brand in top quality.

High load-bearing capacity, due to the asymmetric position of the rows of balls and the specially shaped raceway segments. These linear bearings can be fitted inside a closed or slotted housing and are thus adjustable.

With wiping double-lip seals.

These bearings are self-aligning up to $\pm 0,5^\circ$. All bearings are lubricated ready-to-install.

Recommended shaft tolerance h6, housing tolerance H6 or JS6.

Stainless version on request.

Linear Slide Bearings PO-3 Made from Plastic, ISO Series 3, Closed Design

External dimensions like ISO Series 3 from premium brand in top quality. The sliding material is polyacetal with a specific polyethylene. The linear slide bearings should be specifically chosen if, due to unusual operating conditions, linear bearings cannot be used.

Linear slide bearings feature the same mounting and securing options as the linear bearings of the ISO Series 3 and can be fitted in the same housings.

Tolerances: Mounting hole H6, shaft h6.

Temperature range: -40°C to +80°C.

Precision Housings KG for Linear Bearings of Closed Design, ISO Series 3

Linear bearing (spherical bearing or sliding bush) and retaining rings have to be ordered separately.

Material: Aluminium die-cast.

Light housing for linear bearings of closed design, ISO Series 3 (linear bearing has to be ordered separately).

The housings can be mounted standing, upside-down or horizontally. The bearing is secured in the housing against axial and radial movement with a grease nipple. At the slotted housing, the desired radial clearance can be set with an adjusting screw during the mounting.

Linear Bearings Units KG-3-O ISO Series 3, with Linear Bearing of Open Design

Top view, turned

Material: Housing made from extruded aluminium with an open linear bearing of the ISO Series 3 from premium brand in top quality. With self-aligning capability that accommodates tilting, adjustable clearance and double-lip seals.

All bearings are lubricated ready-to-install.
Recommended shaft tolerance h6.

Quadro Linear-Bearing Units KGQ-3-0 ISO Series 3, Economy-Line, with Linear Bearings of Open Design

Bottom view, turned

Material: Housing made from extruded aluminium with four open linear bearings of the ISO Series 3 from reliable brand in good quality at low price. Self-aligning capability that accommodates tilting.

All bearings are lubricated ready-to-install.
Recommended shaft tolerance h6.
Spare linear bearing page 491.

Shaft steel with shaft support and shaft blocks page 479.

Profiled Track Rollers LFR

Material: Roller bearing steel 100CR6.

- Standard rollers in high quality with very strong outer ring and special groove design for 2-point contact. Pressure angle 30°.
- Integrated double-row angular contact ball bearings for common axial and high radial load.
- Usable on hardened and ground linear shaft steel with shaft support or on special linear guides.
- On choice: With friction-free metal shields 2Z or with contacting rubber seals 2RS.

Accuracy class PN DIN 620. Radial clearance approaching class CN. Temperature range: -30°C to +90°C (for short time up to +110°C).

Precision Rail-Guide Sets RE and RE-ACS

Material:

Rails: Tool steel 1.2842 (90MnCrV8), hardness 61±3 HRC.
 Rollers: Bearing steel 100Cr6, hardness 62±4 HRC.
 Cages and end pieces: Plastic.

Technical data:

- Speed: Up to 3 m/s.
- Acceleration: Up to 80 m/s².
- Accuracy class: P10 (max. 10µm/1000 mm).
 Higher accuracy classes P5 and P2 on request.
- Temperature range: -20°C to +80°C.

Lubrication: The rails have to be lubricated before mounting (z.B. lithium soap grease on mineral oil basis). Relubrication intervals depend on the type of application.

Contents of Delivery: A set consists of 4 half-rails, 2 plastic cages with rollers and 8 end pieces (delivered unassembled). From these components a complete rail-pair unit can be assembled

Sizes: Two sizes with different lengths. Other sizes on request.

Design RE: For applications with limited travel, if high stiffness or load bearing capacity and positioning accuracy is required in very confined spaces. The rails are usually supplied in pairs, see contents of delivery.

Design RE-ACS: As version RE, but with an additional Anti-Creeper-System (ACS) that prevents the cage from creeping. This means the cage is guided by a plastic gear and teeth at the profile base. Hub and Load Rating are lower than for version RE (see table).

Applications: machine tools, handling systems, special machinery, measuring and testing equipment.

Miniature Profile Rail Guides

Material: Rails: Stainless steel 1.4037. Guide Carriage: Stainless steel 1.4037 with return zones of POM. Balls: Stainless steel 1.4037.
Seals: Polyurethane.

Technical Data:

- Structure: 4-point contact ball recirculation system with identical load angles and 2 ball recirculation paths per carriage for unlimited stroke.
- Product range: four different rail widths: 7, 9, 12, 15 mm with one or two carriages.
- Temperature range: from -20°C to +80°C.
- Speed: Up to max. 3 m/s.
- Acceleration: Up to 80 m/s².

Use: e.g. for applications in the fields of precision engineering, medical engineering, electronics production and the optical industry. High load bearing capacity at a minimum of mounting space.

Compact: Simple design, compact and cost efficient.

Fast: Ideal for linear movements up to 3 m/s.

Durability: Due to the pointed-arch shaped raceways, the carriages can take up loads and torques acting in any direction. High load bearing capacity and long service life.

Rust-resistant: All components are made from rust-resistant steel or of plastic.

Easy maintenance: Easily relubricatable through lubrications holes located in the end pieces of the carriage.

Lubrication and Sealing

Delivery prelubricated and ready for mounting. The individual carriages can be relubricated through lubrication holes located at the face side. The lubrication intervals depend on the distance travelled, the cycles and ambient conditions.

Demounting and Mounting of the Carriages

The system is premounted when delivered. To demount the system please regard the following instructions:

- Remove the end stop (1) from the rail.
- Position the mounting rail at the end of the rail (2), make sure there is no misalignment or gap.
- Move the carriage (3) from the rail onto the mounting rail while keeping both rails firm in position. For mounting the carriage on the rail, please proceed in reverse order.

Attention: please always use the enclosed mounting rail, as otherwise the ball retention inside the carriage is not guaranteed.

Miniature Slide Units

Material: Slides, rail and balls: Stainless steel 1.4034.
Cage and end pieces: Plastic.

Technical data:

- Speed: Up to 3 m/s.
- Acceleration: Up to 80 m/s².
- Accuracy class: P5 (standard, for most applications).
- Preload class: TO (standard, slight clearance).
Other accuracy classes and preload classes on request.
- Temperature range: -20°C to +80°C.
Four rail widths to choose from (7, 9, 12 and 15 mm).

Lubrication: Prelubricated with „Paraliq P460“.
Relubrication intervals depend on the type of application.

Ready-to-mount, pre-assembled. for limited stroke. Especially compact construction. High running accuracy (5 µm/100 mm stroke). Extremely smooth motion. All technical parameters were set to ensure high system stiffness and precision guidance.

Contents of Delivery: One slide mounted on a rail.

Application:

- Pneumatics.
- Semi Conductors manufacturing.
- Medical.
- electronics and micro assembly.
- Precision engineering.
- Measuring applications.

Advantages:

- Compact design.
- High load bearing capacity.
- Excellent running accuracy.
- Smooth running.
- High stiffness.
- Easy mounting.

Linear Motion Guide DA 0115 RC with Ball Carriage

Material: Track made from aluminium.
Carriage: Stainless steel housing with plastic sealings.
 On choice: With stainless steel balls (greased) or polymer balls (grease free).

Linear guide for universal use.

- Two track lengths on choice (for to cut by the customer).
- Without bore holes, or with mounting holes.
- Several carriages can be used on one track.
- Resistant against corrosion and dirt.
- All parts have to be ordered seperately.
- Long service life, tested to 80,000 meters of travel distance.

Ordering details: e.g.: 1x Prod. No. 649 705 01, Carriage,
 1x Prod. No. 649 705 12H, Track 1200mm with Mounting Holes,
 2x Prod. No. 649 705 03, End Stop

Accuride

Mounting holes only
 at Product No. 649 705 12H
 and Product No. 649 705 24H

Product No.	Product	Load ratings in kg depending on mounting position and number of carriages									Weight g
		vertically mounted			horizontally monted, lying			horizontally monted, hanging			
		1 Carriage	2 Carri.	3 Carri.	1 Carriage	2 Carri.	3 Carri.	1 Carriage	2 Carri.	3 Carri.	
649 705 01	Carriage with stainless steel balls	50	90	130	30	55	70	40	70	90	120
649 705 02	Carriage with polymer balls	30	54	75	18	32	42	24	42	54	85
649 705 12	Track, length 1200mm										635
649 705 12H	Track, length 1200mm with holes										635
649 705 24	Track, length 2400mm										1270
649 705 24H	Track, length 2400mm with holes										1270
649 705 03*	End Stop (1 piece)*										15

* Depending on the application, 2 pieces may be required. 2 screws included.

Carriage (with mounting aid) and End Stops have to be ordered seperately.

Track lengths 1.2 or 2.4m
 (to be cut by the customer).

The load ratings depend on the mounting position (see table).

Drilling jig: to drill pinholes for permanent pinned connection of tracks.

Note

Not recommended for high torque applicatins.
 Fix track on a rigid and levelm surface. Fixing recommendation:
 M4 countersunk screw or 4mm countersunk wood screw.
 Drill countersunk holes in the middle of track, hole distance from
 100mm up to 200mm, depending on mounting position and load.

Push the carriages with the mounting aid carefully onto the track.
 Distribute weight evenly across carriages. Infinte track lengths
 possible. Butt tracks end to end and align the centre lines. For
 permanent pinned connection, use drilling jig (on request) for
 3mm pins

Cup Rollers with Fastening Element

Material Version A:	Housing:	Steel, zinc plated.
	Ball cup:	Steel, case hardened.
	Ball:	Steel, hardened.
Material Version B:	Housing:	Steel, zinc plated.
	Ball cup:	Steel, case hardened.
	Ball:	Stainless steel, hardened, Material No. 1.3541.

Due to the special shape of the top part, an assembly plug should be used. Assembly plug see below.

Max. speed 2m/sec.

Ordering Details: e.g.: Product No. 654 310 15, Cup Roller with Fastening Element, Version A, 15 mm

Product No. Version A	d _w mm	D mm	D ₁ mm	h mm	H mm	b mm	Seating-Ø D _B mm	s min	Load Rating C* N	Weight kg
654 310 15	15	24 ^{-0,13}	31	9,5 ^{±0,2}	20,5	5,5	24 ^{+0,5}	1,5	500	0,044
654 310 22	22	36 ^{-0,16}	45	9,8 ^{±0,2}	28,6	6,0	36 ^{+0,8}	2,0	1300	0,146
654 310 30	30	45 ^{-0,16}	55	13,8 ^{±0,3}	37,5	8,0	45 ^{+1,0}	2,5	2500	0,290

Product No. Version B	d _w mm	D mm	D ₁ mm	h mm	H mm	b mm	Seating-Ø D _B mm	s min	Load Rating C* N	Weight kg
654 320 15	15	24 ^{-0,13}	31	9,5 ^{±0,2}	20,5	5,5	24 ^{+0,5}	1,5	370	0,044
654 320 22	22	36 ^{-0,16}	45	9,8 ^{±0,2}	28,6	6,0	36 ^{+0,8}	2,0	970	0,146
654 320 30	30	45 ^{-0,16}	55	13,8 ^{±0,3}	37,5	8,0	45 ^{+1,0}	2,5	1900	0,290

* Due to unevenness of the running surface, there are often only three rollers carrying the weight. Therefore the chosen load rating should equal at least one third of the load.

Assembly Plugs for cup rollers with Fastening Element

Material: Aluminium.

For ball cups with fastening element.

Avoids damage to the upper, conical part of the housing.

Ordering Details: e.g.: Product No. 654 300 15, Assembly Plug for Ball Cups 15 mm

Product No.	Ball Cup-Ø d _w mm	D ₂ mm	D ₃ mm	t _{min} mm	α °	Weight kg

Hexagon Nuts DIN 6330 (Height 1.5 x d)

Material: Heat-treated steel, tensile strength 10.

Shape B, with round contact surface at one end.

The round end matches the spherical washers DIN 6319 page 468.

This combination can be used to compensate bearing displacement.

Ordering Details: e.g.: Product No. 653 206 00, Hexagon Nut DIN 6330, M6

Turnbuckles Similar to DIN 1478, Zinc-Plated, Made From Seamless Steel Tube

Material: St37 DIN 1629, zinc-plated.

Some turnbuckle nuts are supplied with cross-holes, according to DIN 1478 as at 09/2005, which serve to check the minimum thread engagement.

Ordering Details: e.g.: Product No. 653 906 00, Turnbuckle DIN 1478, zinc-plated M6

Product No. zinc-plated	d* mm	L mm	min. thread engagement mm	Adjustability mm	Weight g

* One side right-hand thread, other side left-hand thread.

Turnbuckle Nuts Similar to DIN 1479

Material: St37 DIN 1629, either untreated or zinc-plated.

M6 to M16 with overlapping thread, from M20 middle part relieved.

Some turnbuckle nuts are supplied with cross-holes, according to DIN 1479 as at 09/2005, which serve to check the minimum thread engagement.

Ordering Details: e.g.: Product No. 653 806 00, Turnbuckle Nut DIN 1479, M6

Product No. untreated	Product No. zinc-plated	d* mm	L mm	SW mm	Min. thread engagement mm	Adjustability mm	Weight g

Locknuts DIN 981, Steel or Stainless Steel

Material:

standard: Steel, min. strength 350 N/mm².
stainless: Stainless steel 1.4618 (AISI 201).

These nuts are used for unsafed, quickly to loosen applications, or for a safe connection with an additional lockwasher DIN 5406 (for these lockwashers, a keyway is required on the shaft thread).

Recommend tolerance for the shaft thread: 6g DIN ISO 965.

Ordering Details: e.g.: Product No. 653 630 00, Locknut DIN 981, Steel, KM 0

Locknuts UW with Locking Device, Steel and Stainless Steel

Material:

standard: Body of the nut: Low carbon steel (FUOOSS).
stainless: Body of the nut: Stainless steel 1.4301.
Locking insert: Stainless Steel.

With these slotted nuts no additional lock washers or keyways are required. No keyway or washer required for roller bearing. Designed for easy assembly. Maintenance-free construction. The bolt thread has to meet the medium quality of ISO 965.

Please note:

Ensure that there are at least two or three full threads behind the locking insert.
This slot nut must not be used on shafts with keyway.
Lubricate the nut when screwing it onto the shaft.
Larger thread diameters can be supplied on request.

Function:

This system consists of a shaft nut and a special spring, acting as friction ring. This special spring is integrated into the upper part of the nut.
Due to the lead of the thread the special spring locks itself between shaft and nut. **The system is locked in any position!**

Locknuts KMK with Integral Locking Device

Material: Nut: St47.

Locking insert: Sintered metal.

Design: Metric ISO thread according to DIN 13 part 27.
Tolerance class: 5H or ISO 965/III-1980.

Reusable shaft nut with integrated locking device. Special feature of the shaft nut is the locking insert, integrated into the nut. This insert is threaded and thus does not cause any damage. The locking insert is pressed against the shaft thread with a locking screw and thus prevents the nut from turning.

Knurled Thumb Screws DIN 464, Burnished Steel and Stainless Steel

Material: Steel burnished, tensile strength 5.8.

Material: Stainless steel 1.4305.

Visible face precision turned.

Contrary to the standards sheet, all knurled screws are produced from one piece and threaded over their full length.

Ordering Details: e.g.: Product No. 654 205 00, Knurled Screw DIN 464, M4 x 8

Swing Bolts similar to DIN 444, Burnished Steel and Stainless Steel

Material: Steel burnished, tensile strength 5.8.

Material: Stainless steel 1.4305.

Precision made, thread rolled.

Contrary to the standards sheet the burnished steel version has a higher tensile strength (5.8 instead of 4.6 / 5.6) and the thread length l_2 is larger at both version.

The stainless steel version is not part of the DIN.

Thrust Screws with Brass Bolt

Material:

Screw: Steel, tensile strength 12.9, burnished.

Bolt: Brass.

Note: Brass bolt press-fitted. Used for gentle pressing-in or clamping of threaded spindles, axles, shafts and surface treated parts.

Temperature range: -60°C to +350°C.

Ordering Details: e.g.: Product No. 654 604 06, Thrust Screw with Brass Bolt, M4 x 6.5

Spring Plungers with Ball and Head, Steel or Stainless Steel

Material: **Type A:** Body: Steel, burnished.
Ball: Ball bearing steel, hardened.
Spring: Stainless steel.

Type AN: Body: Stainless steel.
Ball: Stainless steel.
Spring: Stainless steel.

Used for fixation and to press something in or push it out.
Temperature: max. +250°C.

Ordering Details: e.g.: Product No. 654 634 00, Spring Plunger M4

Cam-Action Indexing Plungers 612 Made from Steel

Material: Steel, burnished, cam-action indexing plunger precision turned and nitrided. Cap: Plastic Thermoplast (polyamide) black, matt finish.

Note: cam-action indexing plungers are used if the plunger pin sometimes needs to be retracted, i.e. must not stick out. Turning the indexing plunger by 180° causes the plunger pin to retract. There is a notched catch to ensure the plunger can be locked in both positions.

Version A: without counter nut, without plastic cap.

Version B: without counter nut, with plastic cap.

Version AK: with counter nut, without plastic cap.

Version BK: with counter nut, with plastic cap.

Cam-Action Indexing Plungers 612 Stainless Steel

Material: Stainless steel 1.4305/1.4404. Tension spring: 1.4310. Plunger pin ground.

Cap: Plastic Thermoplast (polyamide) black, matt finish.

Note: cam-action indexing plungers are used if the plunger pin sometimes needs to be retracted, i.e. must not stick out. Turning the indexing plunger by 180° causes the plunger pin to retract. There is a notched catch to ensure the plunger can be locked in both positions.

Version A-N: without counter nut, without plastic cap.

Version B-N: without counter nut, with plastic cap.

Version AK-N: with counter nut, without plastic cap.

Version BK-N: with counter nut, with plastic cap.

Indexing Plungers 417, without Rest Position

Material: Housing zinc die-cast, plastic coated black, textured finish. Plunger pin: Stainless steel 1.4305. Spring and lifting ring (type A): Stainless steel 1.4310. Knob (type B): Plastic (Polyamide PA) black, matt finish, not removable.

Indexing Plungers without rest position are used where, on releasing the knob or lifting ring, the plunger pin should be returned to its initial position by the spring force.

Type A: without rest position, with lifting ring.

Type B: without rest position, with knob.

Ordering Details: e.g.: Product No. 666 680 04, Indexing Plunger 417 type A, 4mm

Indexing Plungers 417, with Rest Position

Material: Housing zinc die-cast, plastic coated black, textured finish. Plunger pin: Stainless steel 1.4305. Spring: Stainless steel 1.4310. Knob: Plastic (Polyamide PA) black, matt finish, not removable.

Indexing Plungers with rest position are used where the pin has to remain in retracted position. To achieve this, the knob is rotated by 90 degrees after being retracted. A notched catch stops the locked-in knob from returning to its initial position accidentally or due to vibration.

Type C: with rest position, with knob.

Indexing Plungers 717, Steel and Stainless Steel, without Rest Position

Material Standard Version: Body zinc plated, blue passivated.

Material Stainless Version: Body stainless steel 1.4305.

Both versions: Plunger pin stainless steel 1.4305. Spring and lifting ring (type A/K) stainless steel 1.4310. Knob (type B/BK) plastic (Polyamide PA) black, matt finish, not removable.

Indexing plungers 717 are reasonably priced, with small dimensions, for applications where high precision indexing is not required.

Indexing Plungers without rest position are used where, on releasing the knob or lifting ring, the plunger pin should be returned to its initial position by the spring force.

During assembly, do not exceed the fastening torque TA.

Type A: without rest position, with lifting ring, without counter nut.

Type AK: without rest position, with lifting ring, with counter nut.

Type B: without rest position, with knob, without counter nut.

Type BK: without rest position, with knob, with counter nut.

Type A: without rest position, with lifting ring, without counter nut.

Type AK: without rest position, with lifting ring, with counter nut.

Type B: without rest position, with knob, without counter nut.

Type BK: without rest position, with knob, with counter nut.

Indexing Plungers 717, Steel and Stainless Steel, with Rest Position

Material Standard Version: Body zinc plated, blue passivated.

Material Stainless Version: Body stainless steel 1.4305.

Both versions: Plunger pin stainless steel 1.4305. Spring stainless steel 1.4310. Knob (type B/BK) plastic (Polyamide PA) black, matt finish, not removable.

Indexing plungers 717 are reasonably priced, with small dimensions, for applications where high precision indexing is not required.

Indexing Plungers with rest position are used where the pin has to remain in retracted position. To achieve this, the knob is rotated by 90 degrees after being retracted. A notched catch stops the locked-in knob from returning to its initial position accidentally or due to vibration.

Type C: with rest position, with knob, without counter nut.

Type CK: with rest position, with knob ring, with counter nut.

Type C: with rest position, with knob, without counter nut.

Type CK: with rest position, with knob, with counter nut.

Indexing Plungers 817, Steel and Stainless Steel

Material Steel Version: Steel burnished. Plunger pin: Hardened.
Material Stainless Steel Version: Stainless steel 1.4305. Plunger pin nickel plated. Knob: Plastic Thermoplast (polyamide) black, matt finish, cannot be disassembled.

Indexing plunger 817 offer the following advantages:

- small outer dimensions.
- most of the release mechanism (version C/CK) is covered.
- defined thread length by an undercut at the end of the thread (version G/GK).

Version B/BK with knob, without notched catch, this version is used where, on releasing the knob, the plunger pin should be returned to its initial position by the spring force.

Version C/CK with knob, is used if the plunger pin has to remain in retracted position. To achieve this, the knob is rotated by 90 degrees after being retracted. A notched catch stops the locked-in knob from returning to its initial position accidentally or due to vibration.

Version G/GK with threaded plunger end, for applications where a special knob to customer's request is required or where the plunger pin is not shifted manually.

Version B: with knob, without counter nut.

Version BK: with knob, with counter nut.

Version C: with indexing knob, without counter nut.

Version CK: with indexing knob, with counter nut.

Version G: with threaded bolt, without counter nut.

Version GK: with threaded bolt, with counter nut.

Steel Versions:

Stainless Steel Versions:

Control Knobs 726.1

Material:

Aluminium, black anodised finish, scale (version S) and arrow (version A): white, engraved with laser precision. Knob cover disk: light- grey plastic. Collet/hexagon nut: brass. Stainless steel set screw: DIN 916 with Allen screw and serrated end.

Type A: with arrow.

Type B: neutral, without arrow or grading.

Type S: with scale 0...9, 20 graduations.

Version 1: with set screw (bore d_2).

Version 2: with collet (bore d_3).

When mounting, the cover is pressed in by hand, for demounting it can be lifted up at the slot using a screwdriver. The collet version allows easy "adjustment" of the knobs and offers completely secure mounting on the shaft. Scale or arrow are fully abrasion proof and easy to read, as the engraving makes the aluminium coloured figures and numbers stand out against the black, anodised surface. Besides the standard scale (Version S) these knobs can be supplied with any scale desired (on request).

Star Knobs with Axial Bearing

Material: Grip: Thermoplast (PA).
 Insert: Heat-treated steel nitrided, burnished.

The advantages of the axial bearing:

- double clamping force with same lever size, by reducing the surface friction.
- Less wear on the component due to fixed locating face.
- Little settling due to higher pre-tensioning force of the bolt or thread.

Star Knob Screws with Axial Bearing

Material: Grip: Thermoplast (PA).
 Insert: Heat-treated steel nitrided, burnished.
 Screw: Steel tensile strength 8.8, burnished.

The advantages of the axial bearing:

- double clamping force with same lever size, by reducing the surface friction.
- Less wear on the component due to fixed locating face.
- Little settling due to higher pre-tensioning force.

Ordering Details: e.g.: Product No. 660 640 01, Star Knob Screw with Axial Bearing, Ø 40mm, M6 x 15mm

Retractable Handles NG

Material:
Version K: Duroplast PF31, black, glossy finish.
 Folding mechanism: Steel, burnished.
Version N: Duroplast PF31, black, glossy finish.
 Folding mechanism: Stainless steel 1.4305.

Use: When the handle must at times not stick out. The handle is pulled out of its taper seating and then tilted. A compression spring locks the handle in both end positions. All handles are revolving (type 598).

Ordering Details: e.g.: Product No. 663 200 00, Retractable Handle NG, Version K, 21 mm

Cylindrical Knobs, Press-On Type

Material: Thermoplast (Polypropylene PP), impact resistant, black, matt finish.

These knobs do not require a thread at the shaft.

During mounting, easy blows with a soft hammer are sufficient to drive the knob into place. The shaft end with tolerance h9 should be slightly rounded or chamfered (30°). The knob is quickly mounted and sits absolute vibration-tight.

Temperature resistant up to 80°C.

Ordering Details: e.g.: Product No. 662 201 18, Cylindrical Knob, 18 mm

Adjustable Clamping Levers 355, Version N with Internal Thread, Disengaged by Pulling, Plastic

Material: Threaded bush and retaining screw steel, burnished.
Grip body: technopolymer (Polyamide PA), glas fibre reinforced, black-grey RAL 7021. Serrated ring zinc die casting.

User-friendly design. To be used preferably when the clamping range is limited or if a specific clamping position is required. By lifting (pulling) the handle the splines work loose and the clamping lever can be turned to the most suitable clamping position. Letting go causes the handle to re-engage automatically.

Temperature resistant up to +130°C.

Adjustable Clamping Levers 355, Version G with External Thread, Disengaged by Pulling, Plastic

Material: Threaded stud and retaining screw steel, burnished.
Grip body: technopolymer (Polyamide PA), glas fibre reinforced, black-grey RAL 7021. Serrated ring zinc die casting.

User-friendly design. To be used preferably when the clamping range is limited or if a specific clamping position is required. By lifting (pulling) the handle the splines work loose and the clamping lever can be turned to the most suitable clamping position. Letting go causes the handle to re-engage automatically.

Temperature resistant up to +130°C.

Adjustable Clamping Levers 120 Version N with Internal Thread, Disengaged by Pulling

Material: Handle: Zinc die-cast. Threaded bush and locking screw: Steel burnished. Handle: plastic coated, colour black RAL 9005.

Version N = Handle slanted, with metric-threaded bush.

As they are adjustable, they are very versatile in use. The threaded insert is connected to the lever via the serration and can be released by pulling

Note

This clamping lever has proven ideal wherever the swivel range is limited or where a specific lever position is most convenient for the operator. The lever also features a modern design. By pulling the lever, the serrations are disengaged. Now the handle

can be turned into any direction and the threaded insert can be screwed in or out by turning the locking screw. When the lever is released, the serration re-engages automatically because of the spring tension.

Adjustable Clamping Levers 300, Version N with Internal Thread, Disengaged by Pulling

Material: Threaded bush and locking screw: steel 5.8, burnished.
Handle: zinc die-cast.
Plastic coating: black.

Modern industrial design. Easy to operate. Ideal wherever parts have to be clamped in confined spaces or in a particular lever position.

Pulling the lever upwards disengages the serrations, allowing the lever to be turned to the ideal clamping position. When the lever is released, the serrations automatically re-engage.

On request, the adjustable clamping levers 300 can also be supplied with stainless-steel insert 1.4305.

Adjustable Clamping Levers 300.5, Version IS-N with Internal Thread, Disengaged by Pulling, Stainless

Material: Threaded bush and set screw, stainless steel 1.4305.
Grip body: Stainless steel 1.4308, matt blasted.

Version IS: With internal hexagon screw.

User-friendly design. To be used preferably when the clamping range is limited or if a specific clamping position is required. The thread insert is connected to the handle via splines and can be removed.

By lifting (pulling) the handle the splines work loose and the clamping lever can be turned to the most suitable clamping position. Letting go causes the handle to engage automatically.

Alternatively with outside-hexagon screw on request.

Eccentric clamps 927 with internal thread

Materials: Lever: Zinc die cast, with wear-resistant epoxy resin coating, black matt.
Support washer version A: Zinc-plated steel, chromated.
Support washer version B: Thermoplast, glass-fibre reinforced, black matt.

Version A: With knurled adjustable support washer with fine thread. Thus the clamping force and the lever position can be set exactly on the lever side.

Version B: Non-adjustable support washer. The clamping force, can either be set on the lever side by turning the lever, or on the backside by adjusting the nut/knurled nut if present.

- For rapid clamping and loosening by hand.
- Clamping is made without generating a torque.
- Clamping force is up to 8 kN.

Adjustable Clamping Levers 119 St

Material: Steel burnished.

Version N = handle slanted, with metric thread.

Use: In applications where either the clamping range is limited or where a specific lever position is required. The serrated bore in the spherical hub is fitted with a threaded-bolt insert, which engages in the hub with its own serrations.

By depressing the clamping lever, the serrations are disengaged, freeing it for re-positioning in the most convenient position.

When releasing the lever, the serrations re-engage automatically. Should a rotation of 360° not be possible, the insert can be slightly screwed in (after the lever has been disengaged) by means of the slotted knurled screw.

Ordering Details: e.g.: Product No. 665 508 00, Adjustable Clamping Lever 119 St, 10 mm

Cabinet "U" Handles 525

Material: Plastic Duroplast PF31, black glossy finish, flash mark thoroughly polished.

A special feature is that the flash mark on this handle is not visible nor can it be felt. The large tube diameter and the brass threaded bush lead to an immense rigidity.

Temperature resistant up to 110°C.

Ordering Details: e.g.: Product No. 666 601 00, Cabinet "U" Handle 525, 86 mm

Cabinet "U" Handles 425 from Steel or Stainless Steel

Material: Version CR: Steel, chrome plated.
Washers zinc die-cast, nickel plated.

Version NI: Stainless steel 1.4305, blasted, matt finish. Washers stainless steel 1.4305.

Supplied with two washers. These discs guarantee perfect positioning even with large bores in the cabinet. The washers are loosely packed.

Ordering Details: e.g.: Product No. 666 612 00, Cabinet "U" Handle 425, CR, 88 mm

Folding Handles Made from Steel or Stainless Steel

Material: Version CR: Steel, chrome plated.
Version NI: 1.4305, blasted, matt finish.

Mainly used in applications where the handle should not stick out, or where sticking out should be kept to a minimum. The handle is locked in both end positions by a spring-loaded pressure pin. Hexagon nuts and washers are included in the delivery.

Ordering Details: e.g.: Product No. 666 680 00, Folding Handle, Steel, Chrome Plated

Product No. Version CR	Product No. Version NI	Length l mm	h ₁ mm	h ₂ mm	Weight g

Folding Handle with Recessed Tray 425.4

Material: Folding handle made from steel, chrome plated. Tray: Zinc die-cast, plastic coated, black.

Used in applications where the folded handle must not stick out, or where the sticking out must be max. 3 mm. In addition, screws M4 are sufficient for mounting the handle on the housing. Handle and folding mechanism are made from chrome-plated steel and the tray is made from zinc die-cast. This gives the folding handle additional strength (supplied as complete assembly).

Ordering Details: e.g.: Product No. 666 550 00, Folding Handle with Recessed Tray

Spoked Handwheels 522 Made from Plastic with Revolving Cylindrical Handle

Material: Plastic Thermoplast reinforced, impact-proof, black, matt finish. Hub bush: Steel burnished.

Brass threaded bush for screwing in the cylindrical grip.
Revolving cylindrical handle: Plastic, black.

Perfect and flawless surface and excellent concentricity.

Keyway available at extra charge.

Ordering Details: e.g.: Product No. 675 708 00, Spoked Handwheel 522, 80 mm

Retractable-Handle Handwheels 5223

Material: Thermoplast reinforced, impact-proof, black, matt finish.

Hub bush: Steel burnished.

Folding system: Steel burnished.

Retractable handle: Plastic black.

Use: When the handle must not stick out. The handle is firmly locked in a slim taper in the operating position. To retract the handle, it is pulled out of its taper seat and then tilted. A compression spring locks the handle in both end positions. When folding the handle away, it automatically locks in position.

Keyway available at extra charge.

Spoked Handwheels DIN 950 with Smooth Rim and Slanted Spokes

Material: Grey cast iron.

Number of spokes:

3 spokes for sizes: up to Ø 200.

5 spokes for sizes: from Ø 225.

Version B/A = Rim turned and polished. Hub surfaces machined. Bores H7.

Version B/G = As vers. B/A, but with threaded lug for handle.

Keyway available at extra charge.

Ordering Details: e.g.: 672 408 00, Spoked Handwheel DIN 950, B/G, 80 mm
(Matching handle DIN 39, Product No. 662 116 00 or DIN 98, Product No. 663 116 00)

Version B/G with mounted handle.
Handle has to be ordered separately.

Handwheels with Retractable Handle 3223

Material: Aluminium gravity die-cast, hub machined, rim turned and polished. Parts of the folding mechanism: Steel hardened and bur-nished.

These handwheels are used in applications where the handle must not stick out. Handle and folding mechanism are fully encased in the rim. The handle is locked in the operating position. To retract it, the handle is pulled out of its taper seat and then tilted. A compression spring locks the handle in both end positions.

Keyway available at extra charge.

Ordering Details: e.g.: Product No. 670 516 00, Handwheel with Retractable Handle 3223, 160 mm

Safety Handwheels SHR

Material: Aluminium, polished.

Coupling attachment assembled.

Can only be supplied with revolving, cylindrical handle made from plastic with threaded steel bolt and with hub keyway.

According to safety regulations, handwheels must be mounted on the shaft in such a way that they do not rotate along with the machine drive. Safety handwheels comply with this regulation.

Procedure: Wheel disengaged if not used. By axial displacement of the wheel (pulling) the two serrated wheel rims are engaged. The wheel is now positively keyed to the shaft. When the wheel is released, it automatically disengages. The coupling elements are assembled together in an enclosed unit. Coupling attachment made from steel, nitrided, bearing surface ground and PTFE coated, for minimal friction between bearing surfaces and high wear resistance. An oil hole is provided, which serves to connected to a pressure oiler in the wheel hub. Frequent lubrication is an important precondition in guaranteeing the correct functioning of the plain-bearing coupling attachment. The range of application of these handwheels is limited to low shaft speeds, or to higher speeds of only short duration (e.g. feed screws for milling machine table with rapid feed).

The coupling attachments can also be supplied separately, to be mounted with existing handwheels. Prices on request.

We assume no liability for any consequential damage.

Ordering Details: e.g.: Product No. 670 612 00, Safety Handwheel SHR, 125 mm

Lifting Pins, Self Locking

Material: Steel, manganese-phosphate treated. Press bolt made from AL.

Press = release.
Loosen = lock.

Fast and easy-to-use, robust lifting element with moveable shackle. Special lifting devices, i.e., threads are no longer required on the workpiece. Simple H11 bores are sufficient.

Ordering Details: e.g.: Product No. 666 910 15, Lifting Pin, Self Locking, 10 x 15

Socket Pins with Spring-Loaded Balls, Self Locking (Ball Lock PINS)

Material: Pin part: stainless steel 1.4542 hardened.
Handle: Plastic (PA6).
Spring: stainless steel.

Press = release.
Loosen = lock.

For quick fastening and securing of parts and workpieces. Fast and easily released for frequently repeated actions, e.g., replaceable bearing pins.
Temperature range: -30° / +80° C.

Latch Clamps

Material: Sheet-metal parts: Case-hardened steel C10, zinc-plated, blue passivated.
 Pulling latch: Steel St37, zinc-plated, blue passivated.
 Handle with plastic sleeve, red, oil resistant.

Latch clamps allow a fast and secure locking of lids and covers. The stroke of the pulling ledge can be adjusted within its range. In the clamped position the pulling ledge with its clamping arm is parallel to the plane of the operating handle. Latch bracket included in the delivery.

Quick Clamps (Vertical Clamp with Horizontal Base, without Clamping Bolts)

Material: Steel-sheet parts: Case-hardened steel C10, zinc-plated. Bearing pins: Hardened, from size 200 case hardened.

All moving parts lubricated with special grease.
Handle with plastic sleeve, red, oil resistant.

Operating handle and clamping lever move in the same direction.
In the clamping position the operating handle is vertical. Vertical clamps are available for holding forces F_H from 90 daN up to 460 daN.

Note: Worth pointing out is the clamping arm on all vertical clamps: It is blanked out from full and reinforced on the points of highest load. During the closing movement it is guided on both sides to prevent being affected by possible side thrusts.

Version A: forked clamping arm.
Version E: solid clamping arm.

* Clamping bolt page 574 has to be ordered separately.

Operating Principle

Position 1: By using the toggle link principle, these quick clamps offer essential advantages:

The clamping arm retracts to such an extent, that the workpiece can be inserted and removed completely unobstructed.

Position 2: Even the slightest forward movement of the operating handle moves the clamping arm with the contact pad over the workpiece.

As can be seen from the sketch, the position of the toggle links leads to a multiple of the input force at the operating handle being applied to the clamping arm.

In this position the quick clamp is not yet fully locked, i.e., any counter force applied to the operating handle will open the clamp.

Position 3: In this position all three pivots are perfectly aligned yielding the maximum clamping force (dead centre point). The clamping force applied to the workpiece is mainly dependent on:

- the input force applied to the operating handle,
- the position of the clamping bolt on the clamping lever.

The clamping force can be altered by readjusting the position

of the clamping bolt: It increases if the entire contact area of the bolt touches the workpiece before the dead centre point is reached. This effect is clearly illustrated when using an elastic clamping pad.

Position 4: In this position the toggle link has arrived in the over-centre lock position, and the operating lever has reached a firm stop. This leads to a secure locking (self-blocking) of the quick clamp, preventing it from opening until it is released by the operator. The force which the clamping element is capable of withstanding in this over-centre lock position without suffering permanent deformation is known as holding force F_H . The holding force F_H is a characteristic value (co-efficient) for toggle clamps, and this value is mainly dependent on:

- the size (dimensions, geometry) of the quick clamp,
- the position of the clamping bolt on the clamping arm.

In the tables, the maximum holding force F_H is stated in relation to a particular position of the clamping arm.

Quick Clamps (Horizontal Clamp with Horizontal Base, without Clamping Bolts)

Material: Steel-sheet parts: Case-hardened steel C10, zinc-plated. Bearing pins: hardened, from size 350 case hardened.

All moving parts lubricated with special grease.
Handle with plastic sleeve, red, oil resistant.

Low profile in the clamping position, designed to avoid the operator's fingers being caught between the retracting clamping arm and the operating handle (safety distance). During the closing movement it is guided on both sides to prevent it from being affected by possible side thrusts

Operating principle page 573.

Clamping Bolts and Protective Caps for Quick Clamps

Material:

Hexagon Bolt: DIN 933, steel, strength class 8, zinc-plated.

Hexagon nuts: DIN 934/DIN 936, steel, zinc-plated.

Protective cap: Neoprene 85° Shore hardness, black.

Note: Protective cap has to be ordered separately.

The elastic protective cap can be easily slipped over the bolt head.

Edge Trims

Material: PVC/Steel.

Edge trims simplify the protection of edges, save time in preparatory and subsequent work, and cover sharp edges. They also have a decorative effect.

The substructure of the edge trim contains steel metal clips or a wire construction. This means they have a strong hold even if there are radii or bent parts. Edge trims are mounted on the edges to be covered by hand or with a plastic mallet. Glues or special mounting parts are not required.

Product No.	Clamp Range mm	Colour	Maximum Length m	Weight g/m
687 010 00	1,0 - 2,0	black	100	65

Ordering Details: e.g.: Product No. 687 010 00,

Trim Seals

Material: PVC/EPDM/Steel.

Trim seals are a combination of edge trims made from PVC with a substructure of metal clips and sealed on EPDM-foam rubber.

These profiles serve a double function:

1. Easy covering of construction-conditioned sharp edges.
2. The sealing effect. The foam rubber strips or hollow section are highly flexible and can seal doors and lids. The mounting is done as with edge trims.

Ordering Details: e.g.: Product No. 687 140 00, Trim Seal

Automatic Lubricators "perma®" (Housing Made from Steel Sheet)

Material: Housing made from steel sheet.

Function

Tightening the activating screw makes the gas generator drop into the electrolyte fluid, where it starts a chemical reaction that builds up pressure and causes the piston to move forward. The lubricant is continuously injected into the lubrication point. When the lubrication cartridge is empty, the coloured piston becomes clearly visible. The initial delay between activation and the first discharge of lubricant depends on the perma® type. Lubricant volume 120 cm³.

perma® Types

The lubrication period is determined by the different colour activating screws, and can be checked at any time.

Lubrication period	Colour	Type
1 month	yellow	1
3 months	green	3
6 months	red	6
12 months	gray	12

The code for the lubricant contained is stamped into the bottom of the housing (e.g. SF 01 = all-purpose grease).

On request, the perma automatic lubricator can also be supplied with transparent plastic housing.

Ordering Details: e.g.: Product No. 680 501 00, perma Lubricator, SF 01, Type 1

Other than the manual drip-feed oiler, which also drips when the machine has stopped, the electric drip-feed oiler only drips as long as the machine is running. When the machine stops, the electric drip-feed oiler is also automatically shut off, as the oiler is controlled via the machine programme. Finest dosing of drops is possible - by turning a knurled nut at the top part of the oiler.

Almost all liquids can be dosed drop by drop, provided they are not mixed with solid matters. It is also suited for other media, provided they do not thicken with heat. Attention must be paid to the compatibility with acrylic glass and buna N used as sealing material. (possibly natural glass and vitone sealings on request)

Rolling bearings are to find:

Oil-Level Sight Glasses 541, Plastic

Material: Housing: Polyamid (PA-T) non-ageing, highly transparent. Reflector: Aluminium, anodized in natural colour. Seal: Rubber NBR (Perbunan®).

Temperature resistant up to 100°C.

High strength. Resistant against oil, diesel and solvents. Not resistant against alcohol. At mounting wall thickness below 4mm, a nut is required.

Ordering Details: e.g.: Product No. 681 835 01, Oil-Level Sight Glass 541, G 1/4"

Oil-Level Sight Glasses 743 and 743.1, Aluminium

Material oil-level sight glass 743: Housing: Aluminium, polished. Reflector: Thermoplast. Temperature resistant up to 100°C. Sight glass: Float-Glass. Seals: Rubber NBR (Perbunan®).

Material oil-level sight glass 743.1: as oil-level sight glass 743, but temperature resistant up to 180°C. Sight glass: tempered glass. Seals: Synthetic rubber FPM (Viton®), identification by non-black finish.

Precision Levelling Adjusters

The precision levelling adjusters consist of a threaded mounting bolt (1) and a nut base (2). The fine thread design permits a precise adjustment as well as easy readjustment using the wrench spanner HS (page 536).

Under static load, the adjusted level is firmly fixed by tightening the mounting bolt. The Levellers with Locking Nut are recommended for dynamic loads or when no bolts are used for the mounting.

The safety screw features (3) serves as an end stop for maximum adjustment.

The use of Precision Adjusters KAE/KA EK, KVS/KVSK and KAS facilitates precise adjustment of non-parallel surfaces.

Precision Adjuster NAE and NAEK

Page 590

- For parallel surfaces.
- Low overall height with short adjustment travel.
- Type NAE (without lock nut):
From 15mm (plus 4mm adjustment travel) to 48mm (plus 14mm adjustment travel).
- Type NAEK (with lock nut):
From 20mm (plus 4mm adjustment travel) to 63mm (plus 14mm adjustment travel).

Ball Head Precision Adjuster KAE and KA EK

Page 591

- For non-parallel surfaces up to 4° slope.
- Low overall height with short adjustment travel.
- Type KAE (without lock nut):
From 22mm (plus 4mm adjustment travel) to 72mm (plus 14mm adjustment travel).
- Type KA EK (with lock nut):
From 27mm (plus 4mm adjustment travel) to 87mm (plus 14mm adjustment travel).

Precision Leveller HVS and HVSK

Page 592

- For parallel surfaces.
- Larger overall height with more adjustment travel.
- Type HVS (without lock nut):
From 28mm (plus 15mm adjustment travel) to 95 mm (plus 55mm adjustment travel).
- Type HVSK (with lock nut):
From 33mm (plus 10mm adjustment travel) to 110mm (plus 40mm adjustment travel).

Ball Head Precision Adjuster KVS and KVSK

Page 593

- For non-parallel surfaces up to 4° slope.
- Larger overall height with more adjustment travel.
- Type KVS (without lock nut):
From 35mm (plus 15mm adjustment travel) to 119mm (plus 55mm adjustment travel).
- Type KVSK (with lock nut):
From 40mm (plus 10mm adjustment travel) to 134mm (plus 40mm adjustment travel).

Spacer DS

Page 594

The Spacer DS is used to bridge gaps between the levelling adjuster and the bearing surface when the adjustment travel Δh is insufficient.

Ball Shim KAS

Page 594

Like the ball head precision adjusters KAE the ball shim KAS (Pos. A) facilitates adjustment of non-parallel surfaces with an angle of inclination of up to 4°. If the angle of inclination $\alpha > 1^\circ$, the use of an additional ball shim (Pos. B) is recommended to assure a stable support of the bolt head.

Notes on Mounting

All models can be assembled with a normal mounting screw, to prevent a change of position. Suitable screw sizes are provided in the dimensions tables. The screw length depends on the customers components. That's why the

screw is not included. The adjustment thread is greased on all models (with high quality long-life grease), to prevent seizing. This means that loosening / adjustment is possible even after prolonged use.

All precision levelling adjusters have a safety screw to keep them from falling apart.

Precision levelling adjusters

Examples

Precise fixation of components at an exact level using the Precision Levelling Adjusters NAE or HVS

With an incline of up to about 4° the level can be adjusted by using ball head precision adjusters KAE or KVS.

Level adjustment if there are various substructures.

80-39	M36	2482	394	466 (526) ⁵⁾	860 (920) ⁵⁾	1793	285	261	546

¹⁾ Fastening torque (for screw strength 8.8 for standard versions or 6.8 for stainless version).

²⁾ The preload of any mounting screw used (tensile strength 8.8 for standard versions or 6.8 for stainless version).

³⁾ F_{add.} = max. permissible static load, in addition to the preload of a mounting screw.

⁴⁾ F_{tot.} = max. permissible total static load.

⁵⁾ Bracketed values apply to HVS / HVSK and KVS / KVS.

Precision Levelling Adjusters

Precision Adjusters NAE

Material:

Standard version: 42CrMo4V, No. 1.7225,
Surface zinc plated and chromated.

Stainless version: X10CrNiS18.9, No. 1.4305.

- For parallel surfaces.
- Low overall height with short adjustment travel.
- Without lock nut.

Ball Head Precision Adjusters KAEK

Material:

Standard version: 42CrMo4V, No. 1.7225,
Surface zinc plated and chromated.

Stainless version: X10CrNiS18.9, No. 1.4305.

- For non-parallel surfaces up to 4° slope.
- Low overall height with short adjustment travel.
- With lock nut.

Ordering Details: e.g.: Product No. 686 705 00, KAEK 15-6.6 standard

Other sizes on request.

* Values apply to standard version. Values for stainless version, see page 589

F_{tot.} = max. load. (incl. preload from any mounting screw).

F_{add.} = Load after subtracting the preload of any mounting screw.

Precision Levelling Adjusters

Ball Shims KAS

Material:

Standard Version: 42CrMo4V, Nr. 1.7225,
Surface zinc plated and chromated.

Stainless Steel: X10CrNiS18.9, Nr. 1.4305.

For an angle of inclination (alpha) of up to 4°. If the angle of inclination (alpha) exceeds > 1° out of parallel, the use of an additional KAS is recommended to assure a stable support of the bolt head. See also page 588.

Grub Screws according to DIN 6332 with Thrust Point

Material: Steel quality 5.8, turned, thrust point hardened, burnished.

Type S: With slot.

Type SK: With internal hexagon.

Assembly: Turn thrust screw into thrust pad. The thrust pad has to be held thus that the spring retainer lies in the recess with its open side at the bottom. Now tilt the grub screw as far as possible towards the open side of the ring and press it in. To be combined with the thrust pads DIN 6311 below on this page.

* Static Load

The load figures specified in the table above are guide line values. If these are exceeded, serious permanent deformation or breakage of the plastic base can occur.

These values were established through a series of tests, where with a certain number of levelling feet, a vertical force was applied on the disk for a certain time.

Dependent on the application and the load, a safety factor has to be taken into account, so that the permissible load may be below the guide line values stated in the table.

We cannot accept any liability for possible damages which could be caused by the incorrect use of the articulated feet.

General

Articulated Feet 344 and 344.5 are slightly stepped, this makes them look good and easy to clean.

Due to the use of a high grade plastic material and their shape (ribbed base), that serves to spread the weight over a larger area, the feet have a high load bearing capacity.

The rubber pad is fixed to the base with four pins/bores. The rubber pad levels out slightly uneven ground and makes the foot non-slip.

Levelling Feets 340 of Steel and 340.5 of Stainless Steel

Material Version 340: Steel, zinc plated, chromated.
 Rubber pad: NBR (perbunan) 80 - 85° Shore hardness, black.

Type AG: Steel, with rubber pad.

Material Version 340.5: Stainless steel 1.4301.
 Rubber pad: NBR (perbunan) 70° Shore hardness, black.

Type NG: Stainless Steel, with rubber pad.

* Static Load

The static load is limited by any deformation of the steel base (3 mm thick).

The load figures specified in the table above are based on a series of tests in which a vertical load was applied on the base. At the values stated in the table, a slight deformation of the base might occur.

General

A feature of the leveling feet is the firmly bonded rubber pad in the steel foot also fixed by a screw.

The bolt can be adjusted either at the hexagon at the upper end or at the spanner flats at the bottom end.

Machine Mounts KA with Chromated Steel Plate and Vacuum Profile

Material:

Elastomer: NBR (perbunan) 70° Shore, oil resistant.

Case: Steel, chromated.

Machine mount with vacuum profile, height adjustable without need for bolting down.

For a first, rough calculation:

$$\frac{\text{Overall weight to be supported}}{\text{Number of mounting points}} = \text{Load per machine mount}$$

Machine Mounts (Failsafe)

Material:

Elastomer: Natural rubber 60° +/-5° Shore.

Metal parts: Steel, quality 5.6.

Failsafe machine mounts can be universally used as elastic mounts for all kind of machines. Especially if tensile forces can be expected, these failsafe mounts are the perfect choice of damping element.

Ordering Details: e.g.: Product No. 685 950 00, Machine Mount, 77 x 128

Product No.	A mm	B mm	P mm	F (xM) mm	CF mm	G mm	L mm	s mm	Weight kg

685 965 00	8100	2,9	2793
685 970 00	6800	3,5	1942

The stated values are guideline values for the static load at durometer of 60° Shore A (medium).

* Tensile / compressive load. No damping for tensile load.

Rubber-Metal Bump Stops MGS with Threaded Stud

Material: Metal parts: Steel, zinc plated.
Elastomer: Natural rubber, hardness 55° Shore.

Metal on one side only.

For elastically mounting of power units, and as bump stop to limit the spring travel in vehicles. Bump stops can also be used for machines that cannot be fixed to the floor or are standing on floors with an easily damaged surface, e.g. office machines.

Temperature resistant up to 80°C.

page 811.

Rubber-Metal Bumpers MGK, Conical Design

Material: Metal parts: Steel, zinc plated.
Elastomer: Natural rubber hardness 55° Shore.

* $F_{perm.}$ is the permissible static permanent load, which may be overlaid by a dynamic, alternating load. With shearing load please take care that no tension load in the rubber occurs at all during mounting. To achieve a sufficient fatigue strength provide some compressive pre-stressing.

The stated permissible loads are only approximate, guideline values for the static load for "medium" rubber hardness. With particularly high, dynamic, alternating loads or high frequencies, the load figures have to be reduced accordingly.

Temperature resistant up to 80°C.

Ordering Details: e.g.: Product No. 685 831 00, Rubber-Metal Bumpers MGK, 25 mm

Rubber-Metal Buffers KP

Material: Metal parts: Steel, zinc plated.
Elastomer: Natural rubber hardness 55° Shore.

Simple, reasonably priced standard components used for elastic mounting. When shearing load occurs their load-bearing capacity is considerably lower than with pressure load. This has to be considered when horizontal mass forces or belt traction occur. The grade of rubber used has perfect physical properties.

Ordering Details: e.g.: Product No. 685 031 00, Rubber-Metal Buffers KP 20x24

For a linear resilience characteristic the Spring Load C means, for any operating point, the constant relation of load F [N] to jounce travel f [mm].

$$C = \frac{F}{f} \quad [\text{N/mm}]$$

In the technical data, these constants are stated as CD for pure pressure load and as CS for pure shear load.

* $F_{perm.}$ is the permissible static permanent load, which may be overlaid by a dynamic, alternating load. With shearing load please take care that no tension load in the rubber occurs at all during mounting. To achieve a sufficient fatigue strength provide some compressive prestressing.

The stated permissible loads are only approximate, guideline values for the static load for "medium" rubber hardness. With particularly high, dynamic, alternating loads or high frequencies, the load figures have to be accordingly reduced.

Rubber-Metal Buffers AT

Material: Metal parts: Steel, zinc plated.
Elastomer: Natural rubber hardness 55° Shore.

Simple, reasonably priced standard components for elastic mounting. When shearing load occurs their load-bearing capacity is considerably lower than with pressure load. This has to be considered when horizontal mass forces or belt traction occur. The grade of rubber used has perfect physical properties.

Ordering Details: e.g.: Product No. 685 631 00, Rubber-Metal Buffers AT 20x15

Rubber-Metal Buffers MGA with Internal Thread and Threaded Stud

Material: Metal parts: Steel, zinc plated.
Elastomer: Natural rubber,
Rubber hardness Shore A medium: about 55°.

For this version the same remarks apply as for the Rubber-Metal buffers MGP page 544.

Temperature resistant up to 80°C.

General

These Rubber-Metal, heavy-duty bushes feature an especially high permissible load and large permissible deformation. This great performance is achieved because the rubber parts are firmly attached to the metal parts. The bushes withstand radial, axial and torsional load, without the rubber moving in relation to the metal parts. Minimal gimbal offset (tilting) of the axis of the inner tube in relation to the outer tube, or vice versa, is possible. Depending on the strength, hardness, and length of the rubber, the rubber parts are relatively stiff.

Can be used in machine building or car manufacture as elastic joints, which at permanent operation have to withstand a deflection of approx. ±15° and have to absorb higher radial forces. During deflection a recoiling moment occurs, which is proportional to the torsional angle, as the rubber cannot move in relation to the metal. The bushes are completely maintenance free,

silent and vibration isolating along with a high fatigue strength. Spring element and joint are combined in one single element.

The grade of rubber used is not oil proof. An operating temperature of max. 80° must not be exceeded, otherwise the service life is shortened. Hardness about 60 Shore-A-units. The bushes are usually fixed to the outer tube by pressfit. The inner tube can, e.g., be fixed by applying pressure on the front face. In this case the bolt running through the bore of the bush presses the counter bearing against the front face of the inner tube.

Profile Dampers TR Radial Damping

Material: Co-Polyester Elastomer.

Maintenance-free, self-contained damping element. The radial deformation provides a very soft deceleration with a progressive energy absorption towards the end of the stroke. The excellent temperature characteristic of the material provides consistent damping performance over a temperature range of -40°C to +90°C.

The low installed weight, the economic price and the long operating life of up to 1 million cycles makes this an attractive alternative to hydraulic end position damping, if the moving mass does not need to stop in an exact datum position and it is not necessary to absorb 100% of the incoming energy. The space-saving, compact shape has been realized in all sizes ranging from Ø29 mm up to Ø83 mm and is installed very simply and quickly with the supplied, specially shaped mounting bolt. The TR Series has been specially developed to provide maximum stroke at a minimum mounting space in the capacity range from 2 Nm up to 115 Nm.

The life cycle is up to 20 times longer than for urethane dampers, up to ten times longer than for rubber and up to five times longer than for steel springs.

Overload Capacity: For one cycle it is possible to exceed the W_3 rating by 40%.

Environment: Resistant to oil, grease seawater and to microbe or chemical attack. Excellent UV and ozone resistance. Material does not absorb water or swell.

Dynamic Force Range:
300 N to 2100 N.

Temperature Range:
-40°C to +90°C.

Energy Absorption: 17% to 35%.

Material Hardness: Shore 40D

Mounting: in any position

Impact Velocity range: up to max. 5 m/s

Mounting Bolt Torque:

M5: 6 Nm

M6: 10 Nm

On request: special strokes, characteristics, spring rates, sizes and materials.

** Approx. dimension.

Characteristics of Product No. 691 250 00

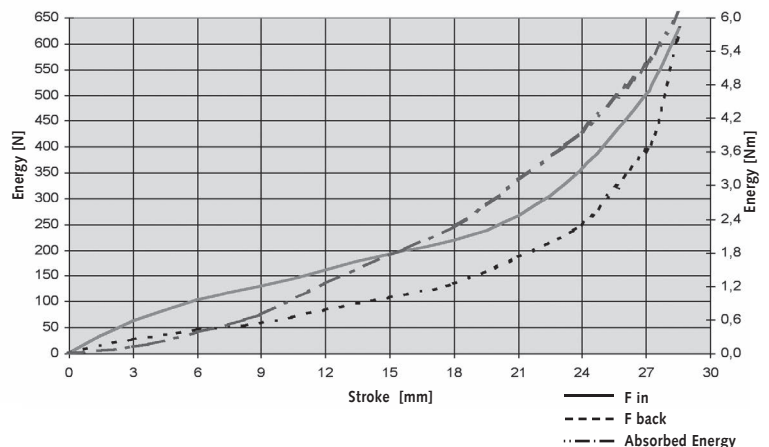

Energy-Stroke Characteristics (static)

E_{tot} : 4.3 Nm E_{abs} : 0.9 Nm $E_{abs/tot}$: 22%

Force-Stroke and Energy Stroke Characteristic (dynamic)

E_{tot} : 6.1 Nm E_{abs} : 2.1 Nm $E_{abs/tot}$: 35%

With aid of the characteristics curves above you can determine the amount of energy that will be absorbed.

Example: Energy to be absorbed 3 Nm = stroke needed 21 mm see chart energy-stroke characteristic. The energy stroke chart serves to determine the absorbed or rebound energy at a given stroke length.

Dynamic ($v > 0.5$ m/s) and static ($v \leq 0.5$ m/s) characteristics for all types available on request.

Profile Dampers TA Axial Damping

Material: Co-Polyester Elastomer.

Maintenance-free, self-contained damping elements. Due to the degressive damping characteristics it provides a very high energy absorption at the beginning of the stroke. The excellent temperature characteristic of the material provides consistent damping performance over a temperature range of -40°C to +90°C.

The low installed weight, the economic price and the long operating life of up to 1 million cycles makes this an attractive alternative to hydraulic end position damping, if the moving mass does not need to stop in an exact datum position and it is not necessary to absorb 100% of the incoming energy. The space-saving, compact shape has been realized in all sizes ranging from Ø12 mm up to Ø80 mm and is installed very simply and quickly with the supplied, specially shaped mounting bolt. The TA Series has been specially developed to provide maximum stroke at a minimum mounting space in the capacity range from 2 Nm up to 280 Nm.

The life cycle is up to 20 times longer than for urethane dampers, up to ten times longer than for rubber and up to five times longer than for steel springs.

Overload Capacity: For one cycle it is possible to exceed the W_3 rating by 40%.

Environment: Resistant to oil, grease seawater and to microbe or chemical attack. Excellent UV and ozone resistance. Material does not absorb water or swell.

Dynamic Force Range:
980 N to 23500 N.

Temperature Range:
-40°C to +90°C.

Energy Absorption: 40% to 59%.

Material Hardness: Shore 55D

* Max. energy capacity per cycle for continuous use. For a single cycle it is possible to exceed this rating by +40% ** Approx. dimensions.

Characteristics of Product No. 691 037 00

Force-Stroke Characteristics (static)

E_{tot} : 25.9 Nm E_{abs} : 12.0 Nm $E_{abs/tot}$: 46%

Force-Stroke and Energy-Stroke Characteristics (dynamic)

E_{tot} : 62.6 Nm E_{abs} : 40.3 Nm $E_{abs/tot}$: 64%

With aid of the characteristics curves above you can determine the amount of the energy that will be absorbed.

Example: Energy to be absorbed 50 Nm = stroke needed 8.8 mm see chart energy-stroke characteristic. The energy stroke chart serves to determine the absorbed or rebound energy at a given stroke length.

Dynamic ($v > 0.5$ m/s) and static ($v \leq 0.5$ m/s) characteristics for all types available on request.

Profile Dampers TS, Axial, Soft Damping

Material: Co-Polyester Elastomer.

Maintenance free, self-contained damping elements. Due to the almost linear damping characteristics it provides very smooth energy absorption along with minimum reaction loads on the machine. The excellent temperature characteristic of the material provides consistent damping performance over a temperature range of -40°C to +90°C.

The low installed weight, the economic price and the long operating life of up to 1 million cycles makes this an attractive alternative to hydraulic end position damping, if the moving mass does not need to stop in an exact datum position and it is not necessary to absorb 100% of the incoming energy. The space-saving compact shape has been realised in all size ranges from Ø14 mm up to Ø64 mm and is very simply and quickly installed with the supplied, specially shaped mounting bolt. The TS Series has been specially developed to provide maximum energy absorption for the minimum overall height in the capacity range from 2 Nm to 65 Nm.

The life cycle is up to 20 times longer than the urethane dampers, up to 10 times longer than for rubber and up to 5 times longer than for steel springs.

Ordering Details: e.g.: Product No. 691 114 00, Damper TS, Ø 14 mm.

Overload Capacity: For one cycle it is possible to exceed the W3 rating by 40%.

Environment: Resistant to microbes, seawater, chemicals and exhibits excellent UV and ozone resistance.
Material does not absorb water and swell.

Dynamic Force Range:
670 N to 5800 N.

Permissible temperature range:
-40°C to +90°C.

Energy absorption: 26% to 45%.

Material hardness: Shore 40D

Mounting position: optional

Impact velocity range: up to max. 5 m/s

Tightening torque:

M4: 4 Nm

M5: 6 Nm

M6: 10 Nm

M12: 85 Nm

M16: 210 Nm

Special strokes, characteristics, spring rates, sizes and materials on request.

* Max. energy absorption per stroke for continuous use. For a single cycle it is possible to exceed this rating by +40%. ** Approx. dimensions.

Characteristics for Product No. 691 144 00

Force-Stroke Characteristics (static)

E_{tot}: 32,7 Nm E_{abs}: 10,1 Nm E_{abs/tot}: 31%

Force-Stroke and Energy-Stroke Characteristics (dynamic)

E_{tot}: 64,1 Nm E_{abs}: 29,2 Nm E_{abs/tot}: 45%

With aid of the characteristic curves, you can determine the amount of energy that will be absorbed.

For example: Energy to be absorbed 50 Nm = stroke needed 14 mm see chart of energy-stroke characteristic. The energy-stroke chart serves to determine the absorbed or rebound energy at a given stroke length.

Dynamic (v>0.5 m/s) and static (v≤0.5 m/s) characteristics for all types available on request.

Miniature Shock Absorbers

Material: Shock absorber and accessories: Stahl burnished. Button: hardened. Piston rod: hardened, stainless steel.

Miniature shock absorbers are maintenance-free, self-contained hydraulic elements. The adjustable miniature shock absorbers can be perfectly set up for the respective application. They include an integrated mechanical stop. Due to the long stroke length, the unit offers smooth deceleration and low reaction forces.

These shock absorbers are ideal for absorbing fast movements in small linear units, handling modules, robotics systems and other applications.

Adjustment: by turning the adjustment screw. After installation, cycle the machine a few times, turning the adjustment screw until optimum deceleration is achieved.

Impact velocity range: 0.3 to 3.6 m/s.

Exceeding W_4 (max. energy absorption per hour) is possible, if the unit is turned off from time to time or the shock absorber is cooled with the cylinder exhaust air.

Mounting position: optional.

Permissible temperature range: 0°C to 66°C.

Double-Acting Standard Cylinder According to ISO 6431 and VDMA 24562 with Magnetic Piston

Materials: Profile barrel: Anodised aluminium. End covers: Aluminium die-cast. Piston rod: Stainless steel (ferritic), Piston and piston rod seals: Polyurethane. O-ring seals: Nitrile rubber.

Medium: Compressed air, filtered, lubricated or non-lubricated.
Standard: ISO 6431, VDMA 24562, NFE 49-003-1.

Mode of operation: Double-acting with magnetic piston and adjustable end-of-stroke cushioning.

Operating pressure: 1 to 16 bar.

Operating temperature: -20°C to +80°C.

Below +2°C please consider the air quality.

Double-Acting Compact Cylinder with Magnetic Piston, According to ISO 21287

Materials:

Profile barrel: Anodised aluminium.
 End covers: Aluminium die-cast.
 Piston rod: Stainless steel (Ø 20 and 25 mm austenitic, Ø 32 and 40 mm ferritic).
 Piston rod seal: Polyurethane.
 Piston seal: Nitrile rubber.
 O-ring seals: Nitrile rubber.

Medium: Compressed air, filtered, lubricated or non-lubricated
 Standard: ISO 21287.

Mode of operation: double-acting, magnetic piston, piston rod with internal thread, buffer cushioning.

Operating pressure: 1 to 10 bar.

Operating temperature: -5°C* to +80°C.

* With temperatures below +2°C please consider the air quality.

On request also available with external thread.

Double-Acting Round-Line Cylinders According to ISO 6432 with Magnetic Piston (Buffer Cushioning)

Materials: Profile Barrel: Stainless Steel (austenitic).
End Covers: Anodised Aluminium, Piston Rod: Stainless Steel (austenitic), Wiper: Polyurethane, Buffer cushioning: Polyurethane, Seals: Nitrile Rubber.

Medium: Compressed air, filtered, lubricated or non-lubricated.
Standard: ISO 6432.

Mode of Operation: Double-acting with magnetic piston and buffer cushioning.

Operating pressure: 1 to 10 bar.

Operating temperature: max. +80 °C.

Ordering Details: e.g.: Product No. 805 100 10, Double-Acting Round-Line Cylinder according to ISO 6431 with Magnet Piston, Cylinder Ø 10 mm, Stroke 10 mm

Piston Rod Swivel Mountings

Materials:

Housing: Steel, zinc-plated.

Bolt: Steel, hardened.

Nut: Steel, zinc-plated.

Mounting element at the piston rod.

Ordering Details: e.g.: Product-No. 810 000 10, Piston Rod Swivel Mounting for Cylinder Ø 10 mm, Thread M4

Product No.	Cyl. Ø mm	Thread KK	B1 mm	F mm	L mm	L2 mm	SW1 mm	SW2 mm	SW3 mm	SW4 mm	Weight g

Magnetic Switches with Reed Contact

Materials:

Housing: Plastic. Cable: PVC 2 x 0.25, PVC 3 x 0.25.
 Mode of operation: N/O with LED (yellow), change over contact without LED.
 Switching Voltage (U_b): 10 to 240 V AC/170 V DC.
 Switching Voltage output: $U_b - 2.7$ V.
 Switching current (see graph): 0.18 A max.
 Switching power: 10 W/10 VA max.

Note: Switch life may be greatly reduced if the maximum values for contact load, switching current and switching voltage are exceeded.

Contact resistance: 150 mW.
 Response time: 1.8 ms.
 Operating temperature: -20°C to $+80^{\circ}\text{C}$.
 Protection rating: IP 66 (DIN 40050).
 Shock resistance: 50 g (during 11 ms).
 Vibration resistance: 35 g (at 2000 Hz).

Ordering details: e.g.: Product No. 810 000 01, Magnetic Switch, N/O, 2 m cable

Product No.	Function	Cable Length m	Weight g

Magnetic Switch, Solid State

Product No. 810 000 04

Section A-B

Product No. 810 000 06

Section A-B

Materials:

Housing Plastic, EMC according to EN 60947-5-2.
Cable: PVC 3 x 0.25.

Mode of Operation: Output with LED (yellow).
Switching voltage (U_b): 10 to 30 V DC.
Switching voltage output: $U_b - 2$ V.
Induced voltage: 0.5 V.
Switching Current (see Graph): max. 150 mA.
Switching power: max. 4.5 W.
Response time: < 0.5 ms.
Operating frequency: 5 kHz.
Operating temperature: -20°C to $+80^\circ\text{C}$.
Protection rating: IP 67 (DIN 40050).
Cable length: 2 m.

Switching Current and Switching Voltage

Ordering Details: e.g.: Product No. 810 000 04, Magnetic Switch without plug

2/2 Solenoid Valves DN 10, Short Version, Nominal diameter 10 mm

Material:

Housing: Brass, PA66.
Seat seal: NBR (Perbunan).
Internal parts: 1.4104, 1.4303, PVDF.

- For neutral gaseous and liquid fluids.
- Electromagnetically actuated valve, with forced valve lifting.
- Diaphragm valves.
- Connection internal thread G1/4 to G1/2.
- Operating pressure 0 to 10 bar (up to 25 mm²/s cSt).

For contaminated fluids insertion of a strainer is recommended.

Description (standard unit):

Solenoid valve for, e.g., air, water, oil.
Switching function: Normally closed.
Flow direction: determined.
Fluid temperature: -10°C to +90°C.
Ambient temperature: -10 °C to +50°C.
Mounting position: optional, preferably solenoid vertical on top.

Features

- Suitable for vacuum.
- Clear design.
- Compact solenoid with integrated core tube.
- Valve works without minimum pressure difference (Zero ΔP).
- Operating pressure 0 - 20 bar with alternating voltage and NBR seal.

Symbol

* Cv-Value (US) = kv-Value x 1.2.

Power consumption

According to DIN VDE 0580 at a coil temperature of +20°C. At operating state temperature of the solenoid (DC) the power consumption decreases, for physical reasons by up to approx. 30%.

DC	AC	
	Inrush	Holding
12 W	20 VA	16 VA

Magnet

Design according to VDE 0580.
Voltage range ±10%.
100% duty cycle.
Protection class acc. to EN 60529 IP65.
Socket acc. to DIN EN 175301-803 (in accessory box).

2/2 Solenoid Valves, DN 20 and DN 25, Standard Version

Material:

Housing: Brass.

Seat seal: NBR (Perbunan).

Internal parts: Stainless steel, PVDF, Brass.

- For neutral gaseous and liquid fluids.
- Electromagnetically actuated valve, with forced valve lifting.
- Diaphragm valves.
- Connection internal thread G3/4 and G1.
- Operating pressure 0 to 10 bar (up to 25 mm²/s cSt).

For contaminated fluids insertion of a strainer is recommended.

Description (standard unit)

Solenoid valve for, e.g., air, water, oil.

Switching function: Normally closed.

Flow direction: determined.

Fluid temperature: -10°C to max. +90°C.

Ambient temperature: -10°C to max. +50°C.

Mounting position: optional, preferably solenoid vertical on top.

Features

- High flow rate.
- For rugged applications.
- Damped operation.
- Suitable for vacuum.
- For systems with low or changing pressure difference.
- Valve works without minimum pressure difference (Zero ΔP).
- Solenoid can be replaced without tools.

Power consumption

According to DIN VDE 0580 at a coil temperature of +20°C. At operating state temperature of the solenoid (DC) the power consumption decreases, for physical reasons by up to approx. 30%.

DC	AC	
	Inrush	Holding
18 W	20 VA	18 VA

Note: For explosion-proof solenoids (on request) the permissible temperature range decreases.

Magnet

Design according to VDE 0580.

Voltage range ±10%.

100% duty cycle.

Protection class acc. to EN 60529 IP65.

Socket acc. to DIN EN 175301-803 A (in accessory box).

3/2 Solenoid Valves, Single Pilot, Normally closed

Version with twin pilot on request.

Materials:

Housing and base plates: Aluminium, Spindle: Stainless steel; Piston, spacers and cover: Plastic; Static and dynamic seals: NBR; Screws: zinc-plated; Springs: Stainless Steel.

Standard pilot controls with replaceable solenoid system for all common voltages.

The valves are suitable for lubricated or non-lubricated standard compressed air.

At normal operating conditions the system has a lifespan of 50 million switching cycles.

The valve system (cartridge) is an optimised version of the million-times proven sealing system. Manual override with detent.

	830 003 00	G 1/4	with	1415

Air preparation equipment consists of Shut-off Valve, Filter-Regulator and Micro-fog Oiler

The patented Quikclamps® allows the equipment to be used in individual or modular installations. The Quikclamp®-Connection Set also allows the mounting and maintenance of individual units without removing the tubes. Equipment like pressure regulators can be easily mounted in four different operation levels.

- 1 Push-to-lock adjusting knob.
- 2 Easy mounting and maintenance due to Quikclamp®.
- 3 3/2-way shut-off valve – compact, lockable, with relief function.
- 4 Easy handling for manual draining of condensate.
- 5 Lubricator sight-feed dome simplifies adjustment and readability of the oil drip rate.
- 6 Micro-fog oiler produces a fine oil fog – ideal for long and complex pipeworks.
- 7 Quick release bayonet bowl.

Pressure Regulator (with Relief Function)

Materials:

Housing: Zinc die-cast.

End covers: Acetal.

Valve: Brass.

O-ring seals: Synthetic elastomers.

Medium: Compressed air.

Operating pressure: Max. 20 bar.

Pressure range: 0.3 to 10 bar as standard.

Relieving Operation: Relief function as standard.

Max. flow: 33 l/s (connection G¹/₄, inlet pressure 10 bar, set pressure: 6.3 bar, $\Delta p = 1$ bar).

Ordering details: e.g.: Product No. 830 005 00, Pressure Regulator with Relief Valve, Connection G¹/₄

Housing: Zinc die-cast.
O-ring seals: synthetic elastomers.
Filter element: Polypropylene.

Medium: Compressed Air.
Operating pressure: max. 10 bar.
Filter element: 40 µm standard.
Draining: Manual.
Pressure range: 0.3 to 10 bar as standard.
Relief valve: Standard with relief valve.
Max. flow: 38 l/s (connection G¹/₄, inlet pressure 10 bar,
Set pressure 6.3 bar, Δp = 1 bar, filter element 40 µm).

Ordering Details: e.g.: Article No. 830 011 00, Filter/ Regulator with Manual Draining

Micro-Fog or Standard Fog Oilers

Materials:

Bowl: Polycarbonate.
Housing: Zinc die-cast.
O-ring seals: synthetic elastomers.
Sight-feed dome: Polycarbonate.

Medium: Compressed Air.
Operating pressure: max. 10 bar.
Bowl size: 0.04 litre.
Flow: 0.47 l/s to 24 l/s*.
*Max. value (connection G¹/₄, inlet pressure = 6.3 bar, Δp = 0.5 bar).

Ordering Details: e.g.: Product No. 830 013 00, Micro-Fog Oiler

Symbol	Product No.	Connection	Type	Weight g

	830 015 00	G ¹ / ₄	Standard Fog Oiler	490

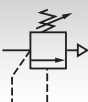

Pressure Relief Valve

Materials:

Housing: Zinc die-cast.
End cover: Acetal.
O-ring seals: synthetic elastomers.

Medium: Compressed Air.
Operating pressure: max. 17 bar.
Pressure range: 0.3 to 10 bar as standard.

Ordering Details: e.g.: Product No. 830 017 00, Pressure Relief Valve

Symbol	Product No.	Connection	Weight g

Quick connectors Pneufit C and Pneufit Push-In fittings

Secure hold and unproblematic multiple mounting, due to high-quality grab ring.

Mounting holes for wall mounting*.

O-Ring seals with parallel threads (G).

PTFE-free pre-applied thread sealant with taper threads (R).

Internal hexagons on all straight fittings offer easy mounting.

Colour codings for improved safety*.

Red release rings for quick identification of metric tube sizes*.

O-ring seals made from silicone-free Nitrile rubber.

* Only for Pneufit C.

Technical Data:

Medium: Compressed Air.

Operating pressure: 18 bar max.

(Regulating-out banjo bolts max. 10 bar).

Vacuum: 98% max.**

Operating temperature: -20°C* to 80°C

(High temperature models on request).

*For temperatures below +2°C please take the air properties into account.

** Only for Pneufit Push-In.

Tube sizes

4, 6, 8, 10, 12, 14 mm outside Ø.

Note: Push-on fittings must not be used in compressed-air break systems of commercial vehicles.

Tubes/hoses

Polyamide tube 11 and 12, polyurethane and polyethylene hoses according to DIN 73378, DIN 74234, NFE 49-100 or BS 5409/1. For safety reasons we recommend our tubes and hoses.

Fastening torques

The following fastening torques apply for fittings with pre-applied thread sealant and taper threads:

Thread	Fastening Torque (Nm)
R1/8	6,86 ... 8,82
R1/4	11,76 ... 13,72
R3/8	21,56 ... 25,32
R1/2	27,44 ... 29,40

Pneufit C Fittings

- Housing made primarily from plastic.
- Low cost.
- Modern design.
- Increasing distribution.

Pneufit Push-In Fast Connectors

- Housing made primarily from nickel plated brass.
- Classical design.

Pneufit C dimensions

Ø A	Ø S*	Ø T**	V _{max}
4 mm	2,8	15,3	10,7
6 mm	4,4	17,1	12,9
8 mm	6,0	19,2	14,5

Pneufit Push-In dimensions

Ø A	Ø S*	Ø T**	V _{max}
4	2,8	14,0	7,5
6	4,4	15,5	11,0
8	6,0	16,5	13,0
10	7,6	21,0	14,5
12	9,6	24,5	18,0
14	11,5	24,5	20,0

* Dimensions valid for all threaded connectors (exemptions possible).

** Dimensions with pushed out grab ring.

Mounting

Ensure that tube is cut off square and is free from burrs.

Push end of tube (outside surface must be free from damage) into the collet.

Push the tube firmly through the O-ring until it bottoms on the Stop.

disassembly

Push the collet against the fitting and withdraw the tube.

Pneufit C Fittings

Ø A = matching tube outer diameter. B = Thread (G for parallel, R for conical).

Block Form Flow Regulators, Uni Directional

Materials:

M5: Housing plastic. Threaded insert: Brass,
Seals: Nitrile rubber. Valve needle: Brass, nickel plated.

G1/8, G1/4: Housing: Zinc alloy. Seals: Nitrile rubber,
Valve needle/inner part: Brass. Outer parts: Aluminium alloy.

G3/8, G1/2: Housing: Aluminium alloy. Seals: Nitrile rubber.
Valve needle/inner part: Brass. Outer parts: Aluminium alloy.
Medium: Compressed air, filtered, lubricated or non-lubricated.
Inert gases.

Operating pressure: 1 to 10 bar (2 to 10 bar for M5).

Operating temperature: max. +80°C (60°C max. for M5).

Mode of operation: Flow regulator.

Ordering details e.g.: Product No. 865 405 00, Block Form Flow Regulators,
Uni Directional, Thread M5

Quick Exhaust Valves

Materials: Housing and cover: Aluminium or zinc alloy.

Seals: Nitrile rubber.

Medium: Compressed air, filtered, lubricated or non-lubricated.

Mode of operation: Poppet valve.

Mounting: In-line.

Operating pressure: 0.5 to 10 bar.

Operating temperature: max. +80°C.

- Enables air to be dumped quickly from air reservoirs and cylinders.
- Allows higher cylinder speeds to be achieved.

Ordering details e.g.: Product No. 865 518 00, Quick Exhaust Valves, Thread G1/8

Blow Guns

Blow Gun with Metal Nozzle

Material: Composite material. Port thread with brass insert,
Nozzle: Steel thread.

Applications:

- Blow off and remove chippings, swarf and dust.
- Cleaning of machines, work benches, work places, and areas which are difficult to reach.
- Drying of work pieces.
- Can be used with air and water.

Blow guns are made from a high-tech composite material and thus very rugged, scratch-resistant, insulating and slip proof. Perfect mounting safety due to brass insert (G1/4 inch internal thread). The blow guns feature good ergonomics. This ergonomic shape means no swarf or dust can gather on the gun.

Steel nozzle: Ø 3 x 6 mm.
 Length of nozzle: 110 mm.
 Flow at 6 bar: 23 N.m³/h.

Temperature: -15 to +70°C.
 G 1/4 internal thread.
 Max. operating pressure: 10 bar.

Product No.	A mm	Weight g
870 001 00	235	138

Ordering details: e.g.: Prod.-No. 870 001 00, Blow Gun with Metal Nozzle

Hoses and tail pieces see next page.

Blow Gun with Straight, Scratch-Resistant Nozzle

Material: Composite material. Port thread with brass insert.
Nozzle: Composite material to prevent surface from getting damaged.

Applications:

- Blow off and remove chippings, swarf and dust.
- Cleaning of machines, work benches, work places, and areas which are difficult to reach.
- Drying of work pieces.
- Can be used with air and water.

Blow guns are made from a high-tech composite material and thus very rugged, scratch-resistant, insulating and slip proof. Perfect mounting safety due to brass insert (G1/4 inch internal thread). The blow guns feature good ergonomics. This ergonomic shape means no swarf or dust can gather on the gun.

Nozzle : Ø 2 x 12 mm.
 Length of nozzle: 59 mm.
 Flow at 6 bar: 15 N.m³/h.

Temperature: -15 to +70°C.
 G 1/4 internal thread.
 Max. operating pressure: 10 bar.

Product No.	A mm	Weight g
870 002 00	187	119

Ordering details: e.g.: Prod.-No. 870 002 00, Blow Gun with Straight, Scratch-Proof Nozzle

Hoses and tail pieces see next page.

Blow Gun with Silent Nozzle

Material: Composite material. Port thread with brass insert.
Nozzle: Composite material to lower noise level.

Applications:

- Blow off and remove chippings, swarf and dust.
- Cleaning of machines, work benches, work places, and areas which are difficult to reach.
- Drying of work pieces.
- Can be used with air and water.

Blow guns are made from a high-tech composite material and thus very rugged, scratch-resistant, insulating and slip proof. Perfect mounting safety due to brass insert (G1/4 inch internal thread). The blow guns feature good ergonomics. This ergonomic shape means no swarf or dust can gather on the gun.

Nozzle to lower noise level.

Length of nozzle: 56 mm.
 Complies with americ. OSHA standard.

Temperature: -15 to +70°C
 G 1/4 internal thread.
 Max. operating pressure: 10 bar.

Product No.	A mm	Weight g
870 003 00	185	119

Ordering details: e.g.: Prod.-No. 870 003 00, Blow Gun with Silent Nozzle

Hoses and tail pieces see next page.

Hose Coils with Swiveling Hose Tail

Material: Polyurethane, flexible and extremely rugged.
Fitting made from nickel-plated brass.

The hose retracts to its original shape: the coils will not lose their original shape even under most adverse operating conditions.

Data of fixed fitting on the supply side:

- PTFE pre-coated thread.
- PVC coating to protect hose.

Data of the swivel connection on the side of the compressed-air tool:

- Swivelling joint with ball bearing.
- Easy swivelling, even under pressure, no overstressing of hose coil.

Max. temperature: 70°C. Operating pressure at 20°C: Ø 5 x 8: 9 bar.
Ø 6.5 x 10: 9 bar.
Ø 8 x 12: 8 bar.

Pressure: 10 bar. Flexibility: bendable. Colour: blue.

Ordering details: e.g.: Prod.-No. 870 105 02, Hose Coil 5x8 mm

Standard and Safety Quick-Release Couplings

Standard and safety quick-release couplings ISO 4414, DIN-Standard EN 983. Adaptor profile 7.2 German standard.

The safety locking system of the safety coupling stops the dangerous „whip effect“.

The novel locking system of the coupling offers optimum tightness at low coupling forces. Innovative, patented technology. Perfect performance and safety.

Standard Quick Coupling

Safety Quick Coupling: one pull and the compressed air is dumped. One push and the adaptor is safely disconnected

Standard and Safety Quick-Release Couplings with Internal Thread

Material: Composite material.

Air-flow- \varnothing : 7.2/7.4 mm.

Air flow: 1470 l/min ΔP : 0.6 bar.

1920 l/min ΔP : 1 bar.

Adaptor profile: NW 7.2 and NW 7.4.

Operating pressure: 2 to 12 bar.

Max. operating pressure: 16 bar.

Temperature range: -15°C to +70°C.

Ordering details: e.g.: Prod.-No., Type, Size

Operating and maintenance instructions

on the internet at www.maedler.de

in the Section Downloads

On our website you can find operating and maintenance instructions in various languages for all our technically-sophisticated products. We are continuously extending this list of instructions.

Instructions available:

- Bevel Gearboxes DZA, DZR
- Bevel Gearboxes KU/I
- Continuously Variable Geared Motors MUN/I
- Couplings DX
- Couplings RN / RNI / RNG
- Couplings BW / BOS / BOZ
- Electronic Drip Oilers ELO
- Frequency Converters FU6
- Frequency Converters RoFre 897
- Helical Gear Boxes BT/I
- Helical Geared Motor HR/I
- Helical Geared Motor NR/I
- Linear Drives (Actuator Systems) GR/I
- Motor Controllers SFRG 05
- Motor Controllers SFRG 3
- Precision Worm Gear Sets
- Safety Clutches CM
- Safety Clutches SI
- Shaft Mounted Gearboxes BOC/I
- Sliding Hubs FA
- Sliding Hubs FS
- Sliding Hubs ROBA®
- Sliding Hubs with Coupling RNR
- Slip Clutches KF
- Slip Clutches R2, R6
- SPANNBOX®, SPANNBOY®
- Standard Three-Phase-Motors SM/I
- Taper Bushes
- Telescopic Slides Accuride
- Worm Geared Motors HMD I / HMD II
- Worm-Geared Motors MEG / MEK / MH / MZ
- Worm-Geared Motors R / RH / RL / RM / RS
- Worm-Geared Motors SRM / SRS
- Worm-Geared Motors SZM, ZMD
- Worm Gear Screw Jacks NP/I
- Worm Gear Units G/II
- Worm Gear Units ZM

Helical Gear Boxes BT/I with Two Shaft Ends

Casing: Cast iron casing with thick walls and ribbed construction, sealed against oil leaks and dust.

Gears: Special steel, extremely hard wearing and case hardened. Smooth-running helical gear wheels with ground or scraped tooth profiles.

Bearing: Generously dimensioned bearings as standard version (heavy-duty bearings for higher overhung or thrust loads available at extra cost).

Lubrication: The gear boxes are delivered ready for work, filled with the correct level of oil or grease, which offers sufficient lubrication for about 10,000 operation hours, or for an operation period of max. 2 years, at a temperature of -30 to +80°C.

Before start up, the plastic plug must be taken out of the venting screw, otherwise excess pressure will build up inside the gearbox.

Ordering details: e.g.: Type, Size, Ratio, Model, Product No.

Flange Mounting Model B 5

Selection of available flanges: Mountings according to DIN 42948.
Up to 300 mm diameter a_1 the recess $\varnothing b_1$ of the output flanges is manufactured according to ISO j6, over 300mm according to ISO h6.

Size	$\varnothing a_1$	$\varnothing b_1$	c_1	$\varnothing e_1$	f_1	s_1
1	120	80	10	100	3	4 x $\varnothing 7$
3	140	95	10	115	3	4 x $\varnothing 9$
4	160	110	10	130	3,5	4 x $\varnothing 9$
5	200	130	12	165	3,5	4 x $\varnothing 11$
6	250	180	16	215	4	4 x $\varnothing 14$
7	300	230	20	265	4	4 x $\varnothing 14$

Permissible Radial and Axial Loads of the Output Shaft

Size	Output Speeds n_2 [min ⁻¹]						
	16	25	36	50	80	125	≥ 130
1 F_R [N]	600	500	450	400	350	300	250
1 F_A [N]	450	400	350	320	300	250	200
2 F_R [N]	1250	1100	1000	900	800	700	600
2 F_A [N]	500	450	400	360	320	280	250
3 F_R [N]	2000	1800	1700	1600	1500	1300	1200
3 F_A [N]	800	720	680	640	600	520	480
4 F_R [N]	3000	2700	2500	2300	2100	1700	1500
4 F_A [N]	1200	1080	1000	920	840	680	600
5 F_R [N]	3600	3400	3150	2900	2500	2000	1800
5 F_A [N]	1440	1370	1260	1150	1010	800	720
6 F_R [N]	4000	3800	3500	3200	2800	2200	2000
6 F_A [N]	1600	1520	1400	1280	1120	880	800
7 F_R [N]	10400	9880	9100	8320	7280	5720	5200
7 F_A [N]	4160	3950	3640	3330	2910	2290	2080

Size 7 is as standard equipped with a stronger bearing system.

The stated values for radial load (F_R) assume that the impact of the load is in the centre of the shaft length (see drawing). If both radial and axial forces occur, the permissible radial force (F_R) indicated in the table is reduced by the value of the occurring axial force (F_A).

Gearbox Selection for Operating Factors Larger Than $f_B = 1$

In addition to the input power (P) and output speed (n_2) you also enter the respective **operating factor** (f_B) into the formula. When selecting the gearbox from the table, the table value (M_n) **must be no smaller than** the calculated figure (M_n).

$$M_{n_2} = \frac{P \times 9550}{n_2} \times f_B$$

M_{n_2} [Nm] = Output torque.

P [kW] = Input power.

n_2 [min⁻¹] = Output speed.

f_B = Operating factor.

Shaft-Mounted Flat Gearboxes BOC/I, 2-Stage

General data: Compact design for confined spaces. Ratios of $i = \text{approx. } 3.5:1$ to $59:1$. Larger ratios on request. Input power of 0.3 to 11.2 kW.

Version A: With hollow shaft on output side = Standard.

Version B: With torque arm.

Version C: With flange on the output side.

Version D: With foot mounting brackets, see drawing page 606.

Version E: With foot mounting brackets, see drawing page 606.

Version F: With single-sided solid output shaft.

(Version B - F on request).

Housing: Rigid, ribbed grey cast iron housing, thus quiet, low-vibration running characteristics. Fully sealed against oil leaks and protected against water jets.

Gears: The helical gear wheels are made from heat-treated and case-hardened steel. The gearing is hardened and precisely machined.

Bearing: Generously-dimensioned roller bearings.

Input shaft/end shield: The shaft tolerances, and the flange adapters which can be delivered on request, are suited for IEC standard motors.

Lubrication: The gear boxes are delivered ready for work, filled with the correct level of oil or grease (ambient temperature -10°C to 50°C), which offers sufficient lubrication for about $10,000$ operation hours, or for an operation period of max. 2 years.

Before start up, the plastic plug must be taken out of the venting screw.

Ordering details: e.g.: Type, Version (A-F), Mounting Position (1 - 5), Size, Ratio, Product No.

Foot mounting against extra charge.

Possible Combinations

Mounting Positions

- Lubricant Level
- Venting Screw
- Drain plug

Bevel Gearboxes HUG, Ratio 1:1

General: Miniaturised right-angle drives for light duty. Suitable for manual and short term drive applications.

Housing: Gear cases are injection moulded in filled nylon 6.6 for low moisture take up, low thermal expansion, high rigidity. Electrical insulating. Shafts hardened and ground.

Gearing: straight teeth, max. backlash 2°. Speed max. 1,000min⁻¹.

Version A: with steel bevel gears, bonded onto the shafts.

Version B: with acetal bevel gears, moulded onto the shafts.

Ordering details: e.g.: Type, Version, Product No.

Product No.	Version	T _{max.} (Ncm)	Weight (g)
410 000 00	A (steel gears)	68	41
410 001 00	B (acetal gears)	11	37

Angular Drive with Acetal Bevel Gears, Ratio 1:1

Material: Housing made from zinc die-cast ZnAl4Cu1. Shafts made from stainless steel 1.4301, dismantlable. Bevel gears from acetal resin, injection-moulded.

- Low cost angular gear drive, ratio 1:1, 6 sizes.
- Suitable for lower torques and intermittent use.
- Shafts running directly in the self-lubricating housing material.
- Easy to mount and maintenance-free.

Shaft angle = 90°. Temperature range - 20°C to +100° C.

Ordering details: e.g.:

Bevel Gearboxes KEK

Angular drives with high torques at very low dimensions.
Suitable in a wide variety of applications
7 Sizes. Ratio 1:1.

Housing: Aluminium, silver anodized. Sealed against lubricant leaks, protected against dust. Can be mounted in any position.

Gearing: Bevel gears from steel, surface hardened.

Bearing: Ball bearings with rubber seal RS.

Lubrication: Maintenance free grease lubrication.

Angular backlash: $3^{\circ} \pm 1^{\circ}$.

Operating time: 10% at 5 min.

Life time: 1,000 hours at max. performance at speed 500 min^{-1} and operating time 20%.

Permiss. operating temperature: -20° to $+60^{\circ}\text{C}$.

Ordering Details: e.g.: Product No. 410 001 01 Bevel Gearbox KEK Size 1

Bevel Gearboxes DZA

General data: 4 sizes and 2 versions.

Ratio either 1 : 1 or 2 : 1. Any mounting position possible.

Ratio for gearing up to max. 750 min⁻¹ possible.

Housing: Thick-walled, one-piece cast aluminium housing, fully oil-tight and dust-proof.

Gearing: The gears are to the Coniflex system, case hardened.

Shafts/bearing system: Input and output shaft are ground and mounted on ball bearings. **From size 2 with keyways.**

Lubrication/maintenance: Lubricated for life, viscosity ISO VG 150. Gearboxes are maintenance free.

Angular backlash: 15 to 30 angular minutes.

Permiss. operating temperature: -18°C to +80°C.

* The gearboxes are thus dimensioned, that the lifetime comes to 10,000 hours at full load and a starting speed of 1,400 min⁻¹.

** Only for version A. At version B, the torque at each output shaft end may be only 50%.

*** Speeds above 1,400 min⁻¹ shorten the lifespan and are only permitted for a short time. If the permiss. operating temperature is exceeded, oil leaks may occur.

Input shaft / output shaft, speed

At both types and both ratios, the input can be at shaft A as well as at shaft B/C.

At ratio 1:1 the maximum speed is 1,400 min⁻¹.

Ratio 2:1 can be used for gearing down and also for gearing up.

Gearing down: Input at shaft A with max. speed 1,400 min⁻¹ (output speed max. 700 min⁻¹).

Gearing up: Input at shaft B/C with max. speed 750 min⁻¹ (output speed max. 1,500 min⁻¹).

Bevel Gearboxes DZR, Stainless Steel

General data: High resistance to corrosion.

4 sizes and 2 versions.

Ratio either 1 : 1 or 2 : 1. Any mounting position possible.

Ratio for gearing up to max. 750 min⁻¹ possible.

Housing: Stainless steel 1.4401 (V4A / AISI 316). Thick-walled, one-piece housing, fully oil-tight and dust-proof.

Gearing: Gleason-spiral bevel gears, hardened.

Shafts/bearing system: Stainless steel 1.4401 (V4A / AISI 316), ground and mounted on ball bearings. **From size 2 with keyways.**

Lubrication/maintenance: Lubricated for life, viscosity ISO VG 150. Gearboxes are maintenance free.

Angular backlash: 15 to 30 angular minutes.

Permiss. operating temperature: -18°C to +80°C.

* The gearboxes are thus dimensioned, that the lifetime comes to 10,000 hours at full load and a starting speed of 1,400 min⁻¹.

** Only for version A. At version B, the torque at each output shaft end may be only 50%.

*** Speeds above 1,400 min⁻¹ shorten the lifespan and are only permitted for a short time. If the permiss. operating temperature is exceeded, oil leaks may occur.

Input shaft / output shaft, speed

At both types and both ratios, the input can be at shaft A as well as at shaft B/C.

At ratio 1:1 the maximum speed is 1,400 min⁻¹.

Ratio 2:1 can be used for gearing down and also for gearing up.

Gearing down: Input at shaft A with max. speed 1,400 min⁻¹ (output speed max. 700 min⁻¹).

Gearing up: Input at shaft B/C with max. speed 750 min⁻¹ (output speed max. 1,500 min⁻¹).

Bevel Gearboxes DZA Model H

General data: Gearbox with hollow shaft on the output side. 2 sizes. Ratio either 1 : 1 or 2 : 1 or 3 : 1. Any mounting position possible. The maximum input speed (hollow shaft as input device) for gearing up is 750 min⁻¹ at 2 : 1 and 500 min⁻¹ at 3 : 1.

Housing: Thick-walled, one-piece cast aluminium housing, fully oil-tight and dust-proof.

Gearing: The gears are to the Coniflex system, case hardened.

Shafts/bearing system: Input and output shaft are ground and mounted on ball bearings.

Lubrication/maintenance: Lubricated for life, viscosity ISO VG 150. Gearboxes are maintenance free.

Angular backlash: 15 to 30 angular minutes.

Permiss. operating temperature: -18°C to +80°C.

Ordering details: e.g.: Product No., Type, Size, Version, Ratio

Bevel Gearboxes KU/I (Rigid Design)

General data: 3 Designs, 6 standard version, and many further variations available as multi-shaft gearboxes, please enquire.
Also Available in corrosion-proof and NO-TOX version for the food processing and pharmaceutical industry.

Housing: Thick-walled grey cast iron, fully sealed against oil leaks and protected against dust. Due to the cube shape, all 6 sides of the gear box can be used as mounting surfaces. The diameters l_1 and l_2 are provided for use as alignment studs.

Gearing: Hardened bevel gears, lapped in pairs

Ratios: 1:1, 1.5:1, 2:1, 3:1, 4:1, 5:1, 6:1

Special transmission ratios available on request. Size 0 only to 3:1.

Bearing System: Generously dimensioned roller bearings, reinforced bearings on request.

Lubrication: The gearboxes are fully enclosed, lubricated for life and maintenance free. On request, the gearboxes can also be supplied with oil change lubrication or NO-TOX lubrication for the food industry. If the gearbox is used at higher speeds (see table) venting must be provided. For this purpose, please state the mounting position (downward-facing side) and operating time.

Model K: Input side A: Ratio for gearing up.
 Input side C: Transmission ratio for gearing down.

Model L: Straight-through shaft, slowly turning.

Model H: Straight-through hollow shaft, slowly turning.

Ordering details: e.g.: Type, Model, Size, Version, Mounting Side (A-F), Ratio, Mounting Position, Output Speed, Product No.

Model H Page 678 - 679

Selection of the Gearbox Size

The following pages serve to determine the required gearbox size from the tables considering:

Output Torque – Power – Load of Input and Output Shaft

In this process, all 3 factors must be taken into consideration, when selecting the gearbox according to the specific requirements. The stated figures refer to an operating time of 100%. Operating time 8h/day. Ambient temperature 20°C, shock-free operation and no additional cooling. If the operating conditions differ from the above, the following factors have to be regarded when determining the required gearbox size (see examples).

Factors by which the transmissible torque has to be multiplied:

Input	Output (load type of driven machine)			Operating time
	Uniform	Medium shocks	Strong shocks	
Uniform	1.0	1.25	1.75	up to 2 h/day: Load factor x 0.8
Light shocks	1.25	1.5	2.0	up to 8 h/day: Load factor x 1.0
Medium shocks	1.5	1.75	2.25	up to 8 h/day: Load factor x 1.25

The product of **transmissible torque x load factor x operating time factor** has to be **smaller** than the **permiss. torque** stated in the table.

Example:

Torque: 250 Nm; Load factor 1.5; Operating time 1.5 h/day
Torque for gearbox selection: $250 \text{ Nm} \times 1.5 \times 0.8 = 300 \text{ Nm}$; $i = 1$
 $: 1$; $n = 250 \text{ min}^{-1} = \text{Selected Gearbox Size 25}$.

Factors determining the max. transmissible power considering heating up of the gear box:

Ambient temperature T	Operating time OT
10° C: permiss. power x 1.2	OT 100% permiss. power x 1.0
20° C: permiss. power x 1.0	OT 80% permiss. power x 1.2
30° C: permiss. power x 0.9	OT 60% permiss. power x 1.4
40° C: permiss. power x 0.8	OT 40% permiss. power x 1.6
50° C: permiss. power x 0.7	OT 20% permiss. power x 1.8

At the same time do not exceed the permiss. T_2 !

If the **permissible** power multiplied with the ambient temperature factor and the operating time is **smaller** than the **existing** power, additional cooling of the gearbox must be provided.

Max. permiss. power output without cooling at 100% OT
Gearbox size 0 1.5 kW
Gearbox size 1 4.0 kW
Gearbox size 2 7.0 kW
Gearbox size 25 17.0 kW
Gearbox size 30 26.0 kW

Example:

Gearbox size 25; $i = 1 : 1$; $n = 750 \text{ min}^{-1}$;
 $P = 25.63 \text{ kW}$; $T = 30^\circ\text{C}$, $OT = 20\%$
 Maximum power from the table: $17 \text{ kW} \times 0.9 \times 1.8 = 27.5 \text{ kW}$
 Gearbox size sufficient, no additional cooling required.

	> 500	1840	1420	2670	3250	4170	5170

The maximum perm. radial forces stated in the table are calculated for the centre of the output shaft end, also calculating in the speed and torque. The values were calculated for the most unfavourable load direction. Precise calculation of load and rotational direction may lead to higher permissible loads for the shaft – please ask us.

Permissible Radial and Axial Loads at shaft d_2

Gearbox Size	T Nm	n_1 [min ⁻¹] - F_R [N]					
		3000	1000	500	250	100	50
0	< 12	180	250	300	350	450	550
	> 12	150	210	250	290	380	460

	> 500	1840	1420	2670	3250	4170	5170

Axial loads F_A can be absorbed, without need for further calculation, up to about 50% of the perm. radial forces. If the axial load exceeds this value considerably or if combined loads of F_R and F_A occur – please ask us.

Dimensions Table Bevel Gearboxes KU/I Model K

The driving unit can be connected to either d_1 or d_2 , so that transmission ratios of up to 6 : 1 for gearing down and for gearing up are possible (apart from gearbox size 0).
 Shaft ends for all types: Tolerance = j_6 ; Thread alignment according to DIN 332 page 2; Keyways according to DIN 6885/1.
 Threaded holes for mounting on all sides of the gearbox as standard. Thread depth of mounting holes = 2 x thread diameter or the thickness of the flange.

Dimensions for $i = 1 : 1$ to 6 : 1 (intermediate transmission ratios on request)

Axial loads F_A can be absorbed, without need for further calculation, up to about 50% of the permissible radial forces. If the axial load exceeds this value considerably or if combined loads of F_R and F_A occur – please ask us.

Dimensions Table Bevel Gearboxes KU/I Model L

The large bevel gear is usually mounted on the straight-through shaft. It is the slow running one.
 The gearbox sizes 1, 2, 25 and 30 can also be supplied as Type LS with straight-through, fast running shaft. In this case the transmission ratio is max. 1 : 2.
 Shaft ends for all types: Tolerance = j_6 ; Thread alignment according to DIN 332 page 2; Keyways according to DIN 6885/1.

Threaded holes for mounting on all sides of the gearbox as standard. Thread depth of mounting holes = 2 x thread diameter or the thickness of the flange.

Dimensions for $i = 1 : 1$ to $6 : 1$, power input at d_1 (intermediate transmission ratios on request) *Type LS: straight-through fast running shaft.

* Gearboxes in stock (without ventilation).

** Transmission ratio for gearing down. For gearing up the values for 1:1 apply. In addition the heating up process has to be considered (see page 673).

Max. Speed in min⁻¹ for Gearbox without Ventilation, at the Output Shaft, $i = 1:1$ to $6:1$

For version 70 and horizontal mounting position. For version 80 these values have to be halved. Values for other OT and other mounting positions on request.

The maximum permissible radial forces stated in the table are calculated for the centre of the output shaft end, also calculating in the speed and torque. The values were calculated for the most unfavourable load direction. Precise calculation of load and rotational direction may lead to higher permissible loads for the shaft – please ask us.

Axial loads F_A can be absorbed, without need for further calculation, up to about 50% of the permissible radial forces. If the axial load exceeds this value considerably or if combined loads of F_R and F_A occur – please ask us.

Dimensions Table Bevel Gearboxes KU/I Model H

Shaft ends for all types: Tolerance = j_6 ; Thread alignment according to DIN 332 page 2; Keyways according to DIN 6885/1. Tolerance of hollow shaft bore = H7. The hollow shaft is always the slower running one.

Threaded holes for mounting on all sides of the gearbox as standard. Thread depth of mounting holes = 2 x thread diameter or the thickness of the flange.

Dimensions at $i = 1 : 1$ to $6 : 1$, standard power input at d_1 (intermediate transmission ratios on request).

Worm Gear Units G/II

General data: **Version A:** Centre distance 31 mm.
Version B: Centre distance 33 mm.

Housing: Aluminium permanent-mould casting, fully sealed against oil leaks and protected against dust, can be mounted in any position.

Gear set: Worms hardened and ground, worm gears made from special bronze.

Bearing System: Input and output shaft with roller bearing.

Lubrication: As a special gearbox oil has been used, in most applications no relubrication or change is required.

Input shaft is the smaller shaft d_1 .

The permiss. output torque refers to shaft d_2 .

Ordering details: e.g.: Type, Version, Ratio, Product No.

All shaft diameters with tolerance h6.

Dimensions without stated tolerance are non binding.

Worm Gear Units KES

Angular drives with hollow output shaft for high torques at very low dimensions. Suitable in a wide variety of applications. One size with center distance 20mm, in 7 ratios.

Housing: Aluminium, silver anodized. Sealed against lubricant leaks, protected against dust. Can be mounted in any position. Worm shaft in vertically position not recommended for continuous operation.

Gearing: Worm from steel, wheel from special brass.

Bearing: Ball bearings with rubber seal RS.

Lubrication: Maintenance free grease lubrication.

Angular backlash: +/-1°. **Operating time:** 10% at 5 min.

Life time: 1,000 hours at max. performance at speed 500 min⁻¹ and operating time 20%.

Permiss. operating temperature: -20° to +60°C.

Ordering Details: e.g.: Product No. 420 020 13 Bevel Gearbox KES Size 1

* Permiss. radial force at F_A=0.

** Permiss. axial force at F_R=0.

Rotational Sense (Rot. direction interchangeable)

Output:
Worm wheel on hollow shaft

Input:
Worm shaft

Torque Conversion

Output torque = Input Torque x Efficiency x Transmission

$$\text{Input torque} = \frac{\text{Output torque}}{\text{Efficiency} \times \text{Ratio}}$$

$$\text{Power } P = \frac{M \times n}{9550}$$

$$\text{Torque } M = \frac{9550 \times P}{n}$$

M = Torque [Nm]
P = Power [kW]
n = Speed [min⁻¹]

Worm Gear Units H/I

Housing: Aluminium die-cast, with connecting threads on both input and output sides. With mounting holes on all other sides.

Worm shaft: hardened and ground.

Worm Gear: Bronze, on cast iron hub.

Lubrication: synthetic oil (lubricated for life).

Lightweight, high quality model range, 5 sizes, centre distance 31.5, 40, 50, 63 and 75 mm. Size 90 and 110 on request. The gearboxes can be used without ventilation and independent from the mounting position.

Output shaft push-in type: The basic gearbox version has a hollow shaft. They can, however, also be supplied with a push in type output shaft (single sided, to be used left and right, or double sided).

These output shafts have their own product No. and have to be ordered separately.

a = Centre distance
i = Ratio
 n_1, n_2 = Input/Output speed

T_2 = Output torque
 $P_{1perm.}$ = Input power
 η = Operating efficiency

Accessories Worm Gear Units H/I

Push-In Type Output Shafts, Single Sided

Material: Steel.

To change the gearboxes H/I over from hollow shaft to solid shaft. The shaft is only pushed in and secured with the enclosed cover disc and mounting screw. The shaft can be pushed in either left or right.

Ordering details: e.g.: Prod. No. 422 031 01, Push-In Type Output Shaft, Single-Sided, Gearbox Size 031

Permissible Radial and Axial Forces

The values are calculated for the centre of the output shaft end, also calculating in the transmission ratio. F_R is the max. radial force for $F_A = 0$.

F_A is the max. permissible axial force for $F_R = 0$.

Gearbox Size	i = 7.5		i = 10		i = 15		i = 20		i = 25		i = 30		i = 40		i = 50		i = 65		i = 80		i = 100

Worm Gear Units ZM/I

General data: Universal heavy-duty gearboxes.
4 sizes, centre distance 40, 50, 63 and 80 mm.
Centre distance 100 - 315 mm available on request.

Housing: High-quality grey cast iron, all sides machined and with mounting holes on 5 sides.

Gearing: 13 ratios from 5 to 83 : 1; worm shaft hardened and ground. Worm gear made from special centrifugally cast bronze.

Efficiency factor: The efficiency factors stated in the selection tables are guideline values for properly run-in and lubricated gearboxes at operating temperature with nominal load and driving worm shaft. Proper running in is a crucial factor influencing the lifetime of the gearbox. The starting efficiency factor (η_A) is, as the operating efficiency factor (h), depending on the lead angle.

Self-locking: Self-locking only occurs in worm gear units, when the unit cannot be driven from the output side. Worms with 4 and 6 threads sometimes permit transmission ratios for gearing up ($i = 5 : 1$ to $13.3 : 1$). If a gearbox must be implicitly self-locking, or must implicitly not be self-locking, we urge you to contact us.

Ratio 72:1 is static and dynamic self-locking.

Bearing system: All gearbox shafts with generously dimensioned roller bearings.

Lubrication: The gearboxes are lubricated for life using synthetic oil. Under normal operating conditions, no maintenance is required. The housing should be checked for leakages at an interval of approx. 2 years.

Ventilation: Size (centre distance) 40 is supplied without ventilation. With the other gearboxes, the sealing plug has to be exchanged with the separately packed venting filter.

Version A

Version HL

Venting Filter (VF)

Size	A mm	B mm	C mm	D mm	E mm	F mm
40*	-	-	-	-	-	-
50	50	20	33	22	58	25
63	62,5	27,5	37	22	67	25
80	77,5	32,5	57	22	82	25

* Size 40 without Ventilation.

Lubrication Volume in Litre (dm³)

Size	Mounting Position			
	1	2	3 + 4	5 + 6
40	0,20	0,25	0,20	0,20
50	0,30	0,60	0,45	0,45
63	0,50	1,10	0,70	0,80
80	0,90	2,10	1,40	1,60

The standard lubrication volume is calculated for mounting position 2. For other mounting positions and high permanent speeds it might have to be reduced, to avoid oil leakages.

Worm Gear Units ZM/I, Technical Data, Size 40

The input power $P_{1\text{ perm}}$ and output torques $T_{2\text{ perm}}$ listed in the selection tables are based on shock-free continuous operation, an operating time of 8 hours/day, 3 starts per hour, operating time (OT) = 100% and 20°C ambient temperature. The maximum output torques $T_{2\text{ max}}$ may frequently be reached in short-term load peaks but they must not be exceeded. With an operating time under 90%, the permissible gearbox output can usually be increased.

i_n, i_{ist} = nominal ratio, real ratio.
 n_1, n_2 [min^{-1}] = input speed, output speed.
 $P_{1\text{ perm}}$ [kW] = permissible input power.
 $T_{2\text{ perm}}$ [Nm] = permissible output torque (permanent).
 $T_{2\text{ max}}$ [Nm] = maximum output torque (peak).
 η = operating efficiency.

* Example: Worm gear number of teeth 29 / worm shaft 6 threads.

¹⁾ This implicitly self-locking version is optimized for hand operation (special worm surface and special oil).

Worm Gear Units ZM/I, Technical Data, Size 80

The input power $P_{1\text{permiss}}$ and output torques $T_{2\text{permiss}}$ listed in the selection tables are based on shock-free continuous operation, an operating time of 8 hours/day, 3 starts per hour, operating time (OT) = 100% and 20°C ambient temperature. The maximum output torques $T_{2\text{max}}$ may frequently be reached in short-term load peaks but they must not be exceeded. With an operating time under 90%, the permissible gearbox output can usually be increased.

i_n, i_{ist} = nominal ratio, real ratio.

n_1, n_2 [min⁻¹] = input speed, output speed.

$P_{1\text{perm}}$ [kW] = permissible input power.

$T_{2\text{perm}}$ [Nm] = permissible output torque (permanent).

$T_{2\text{max}}$ [Nm] = maximum output torque (peak).

η = operating efficiency.

Dimensions Table Page 690.

Version with foot mounting brackets or shafts on both sides on request.

¹⁾ This implicitly self-locking version is optimized for hand operation (special worm surface and special oil).

Dimensions Table Worm Gear Units ZM/I

The sides 1 to 6 are machined and can be used as mounting surfaces. The foot mounting brackets F can be connected to the sides 1 and 2.

(1) The sides 1, 2, 3, 5 and 6 are ex-works always supplied with threaded bores.

If side 4 is to be used as mounting surface, the respective surface is supplied with threaded bores. The worm shaft end can be fitted on side 3 or 4 as desired. Shaft end with thread alignment according to DIN 332/page 2, feather keys and grooves according to DIN 6885/1. Position of the venting filter according to the table on page 685. The gearbox can function in any mounting position.

Version with foot mounting bracket or double-sided output shaft on request.

Permissible Radial Loads F_R [N] for Normal Output Shaft and Bearing System

The permiss. radial loads indicated in the table are calculated for the centre of the output shaft end, also calculating in the output speed and the nominal output torque. The values were calculated for the adverse rotational direction. The permiss. radial loads only apply to unilateral load. If in your application high radial loads occur in combination with axial loads, we ask you to contact us.

Size	Output Torques Nm	Permiss. Radial Load [N] at Output Speeds n ₂ [min ⁻¹]

Standard Three-Phase Motors SM/I, with Cage Rotor, Surface Cooled, for 230/400 V, 50 Hz

These motors comply with the recommendations IEC 72. Electrical characteristics according to VDE 0530 and recommendation IEC 34-1. Housing aluminium die-cast. The motors are self-ventilated and are fitted with radial plastic fans, which cool independently of the sense of rotation. Fan cover made from steel sheet. Protection class IP 55. Isolation class F.

The rated output stated below refers to continuous duty, an operating frequency of 50 Hz, a maximum ambient temperature of 40°C and an altitude 1,000 m above sea level.

From 0.75 kW in efficiency class IE2 (only 2 - 6 pole motors).

Special versions on request: With non-standard voltage and frequency, dual speed, with electromagnetical DC spring-tension disc brake; AC capacitor motor 230 Volt.

Ordering details: e.g.: Type, Model, Product No.

Operating and maintenance instructions

on the internet at www.maedler.de

in the Section Downloads

On our website you can find operating and maintenance instructions in various languages for all our technically-sophisticated products. We are continuously extending this list of instructions.

Instructions available:

- Bevel Gearboxes DZA, DZR
- Bevel Gearboxes KU/I
- Continuously Variable Geared Motors MUN/I
- Couplings DX
- Couplings RN / RNI / RNG
- Couplings BW / BOS / BOZ
- Electronic Drip Oilers ELO
- Frequency Converters FU6
- Frequency Converters RoFre 897
- Helical Gear Boxes BT/I
- Helical Geared Motor HR/I
- Helical Geared Motor NR/I
- Linear Drives (Actuator Systems) GR/I
- Motor Controllers SFRG 05
- Motor Controllers SFRG 3
- Precision Worm Gear Sets
- Safety Clutches CM
- Safety Clutches SI
- Shaft Mounted Gearboxes BOC/I
- Sliding Hubs FA
- Sliding Hubs FS
- Sliding Hubs ROBA®
- Sliding Hubs with Coupling RNR
- Slip Clutches KF
- Slip Clutches R2, R6
- SPANNBOX®, SPANNBOY®
- Standard Three-Phase-Motors SM/I
- Taper Bushes
- Telescopic Slides Accuride
- Worm Geared Motors HMD I / HMD II

Motor controller SFRG 05 for DC-drives

- Intelligent motor controller with PWM output for speed setting or controlling of brushed DC motors.
- Supply voltage: 6 - 48 V DC.
- Motor current: 2,5 A continuous load (5 A peak current).
- Speed setting device or PI-controller operation.
- 4 logical inputs.
- Usable for CANopen.
- Setpoint setting possible via external pot (not included) or external voltage.
- Compact Version thanks to SMD technology.

Ordering Details: Product No. 430 460 05, Control Unit SFRG 05

Product No. 430 460 05, Control Unit SFRG 05

Electrical data

Supply voltage:	6 V ... 48 V DC.
Motor nominal current:	2.5 A continuous load (peak current max. 5 A).
Speed selection:	0 V ... 3.3 V DC via 10 kOhm or external voltage.
Logical Inputs:	0 V ... 3.3 V, max. 50 mA.
Output switching frequency:	approx. 20 kHz.
No load current:	at 6 V ... 48 V DC, 70 mA...20 mA.

General data

Protection class:	3.
Protection rating:	open module IP00 as per IEC529 / EN 60529 / DIN VDE 0470 T1.
Isolation:	Low voltage operation.
Shock protection:	not needed.
Level of contamination:	2. Weight 25 g.
Permissible ambient operating temperature:	-20 to +80°C.

The circuit board is designed for installing in a closed control cabinet or similar housing made from metal with protection class IP 4x. Adequate ventilation is to be provided (free convection). The wiring has to be carried out as per EMC requirements.

Motor controller SFRG 3 for DC-drives

- Intelligent motor controller with PWM output for speed setting or controlling (option) of brushed DC motors.
- Supply voltages: 10 - 36 V DC or 10 - 24 V AC.
- Motor current up to 10 A continuous load.
- Usable for CANopen.
- 5 potential-free switching inputs or 5 voltage input signals 10 - 24 V (switchable per jumpers), 5 setting potentiometers.
- 2 counting inputs for hall sensors or encoder.
- 2 switching outputs, max. 1.5 A.
- 2 zero-voltage relays with changeover contacts.
- Output 12V DC max. 0,4 A, e.g. to supply stop switches.
- Ramp function for start / stop.
- Motor current monitoring.
- pre-programmed functions: Left, right, stop, release.

Ordering Details: Product No. 430 460 30, Control Unit SFRG 3

Product No. 430 460 30, Control Unit SFRG 3

Electrical data

Supply voltage:	10 V... 36 V DC/10 V... 24 V AC.
Motor nominal current:	10 A continuous load (peak current max. 25 A).
Motor current limit:	adjustable (stepless 0-100 % in 1% steps).
Speed setting range:	up to 50:1 (setting mode IxR / controlled operation.)
Digital inputs:	potential-free NO contact, approx. 2 mA or voltage input signals 10 - 24V DC, (switchable per jumpers).
Output switching frequency:	approx. 18 kHz.
Switching outputs:	max. 1.5 A.
Relay outputs:	max. 1A / 24 V DC.
Ramp function:	Rise time/fall time 0-100 % in 1% steps.
Interfaces:	CANopen.

General data

Connector technology:	plug-in spring-type terminals.
Approvals:	complies to the CE standard.
Protection class:	3.
Protection rating:	open module IP00 as per IEC529 / EN 60529 / DIN VDE 0470 T1.
Isolation:	Low voltage operation. not needed.
Shock protection:	
Level of contamination:	2. Weight 120 g.
Permissible ambient operating temperature:	-10 to +60°C.
The circuit board is designed for installing in a closed control cabinet or similar housing made from metal with protection class IP 4x. Adequate ventilation is to be provided (free convection). The wiring has to be carried out as per EMC requirements.	
Application specific matching of the software functions is possible, as well as terminal connection for external pots as an option.	

Toroidal transformers for motor controller SFRG 3

- Safety and separation transformers as per EN 61558.
- Insulating class B (130°C).
- Maximum ambient temperature $t_a = +60^\circ\text{C}$.
- Primary and secondary connection via leads, length: 200 mm.
- Temperature switch (120°C) integrated in the primary windings.
- Pressureless central fastening with an M5 screw.
- Preparation for protection class II (as per VDE 0100).

Ordering Details: e.g.: Product No. 430 460 01, toroidal transformer 120 VA

Product No.	Power VA	Primary voltage V(AC)	Secondary voltage V(AC)	Nominal current A	Outside Ø mm	Length mm	Weight kg
430 460 01	120	1x230	1x24	5,00	98	48	1,25
430 460 02	192	1x230	1x24	8,00	115	48	1,85

Note for usage

These transformers are suitable for powering control units with a rectifier (e.g. SFRG 3). Use with the SFRG 05 control unit without rectifier is not possible.

Frequency Converters FU6 (for 3-phase current Drives)

To 0.75 kW

From 1.5 kW

Main features of the Series FU6 are easy parametrisation, a clearly arranged control panel and an extremely easy operation.

Ordering details: e.g.: 460 310 25 Frequency Converters FU6, 0.25 kW Output Power, 1 Phase

Prod. No.	Number of Phases	Output Power kW	Output Voltage V	Output Current A	Input Voltage V	Input Current A	Input Fuse Protection A	Dimensions H x B x T mm	Weight kg
460 310 25	1	0,25	3 x 0-240	1,4	1 x 230	3,0	16	132 x 72 x 118	0,8
460 310 37	1	0,37	3 x 0-240	2,3	1 x 230	5,2	16	132 x 72 x 118	0,8
460 310 75	1	0,75	3 x 0-240	4,2	1 x 230	9,4	16	132 x 72 x 118	0,8
460 311 50	1	1,50	3 x 0-240	7,5	1 x 230	16,6	20	143 x 118 x 172	1,7
460 312 20	1	2,20	3 x 0-240	10,5	1 x 230	23,2	25	143 x 118 x 172	1,8
460 331 50	3	1,50	3 x 0-400	3,8	3 x 400	5,0	10	143 x 118 x 172	1,6
460 332 20	3	2,20	3 x 0-400	5,2	3 x 400	6,7	10	143 x 118 x 172	1,6

Output

- Rotating-field frequency 0-200 Hz.
- Voltage boost 10%.
- Overload 150% I_n / 60s.

Input

- Voltage 1 x 230 V +/-10% 50/60 Hz.
or 3 x 400 V +/-10% 50/60 Hz.

Control unit

- Cycle rate: 4-16 kHz, adjustable in steps.
- Stop functions: Ramp (0.1-999s), DC braking, coast, brake with chopper from 1.5kW.
- Protection systems: Surge current (200% I_n), overload, IGBT excessive temperature, overvoltage, undervoltage.
- Analog input: 0-10 V, 0-20 mA or 10kOhm potentiometer.
- Analog output: 0-10 V (with current output frequency).
- Digital input: Dry contacts or external 24 V DC industrial logic for start up, reversion of rotation 2 programmable inputs (inching mode, fixed setpoint, emergency stop, reset, external control).
- Digital output: Dry contact, programmable.
- Monitoring: Short circuit phase-phase or phase-earth.

Displays / Operating elements

- Control keys: Setting of system functions.
- Display: Operating mode and error message.

Environment

- Ambient temperature: -10...+40°C.
- Cooling: Fan.
- Rel. humidity: 0...95% not condensing.

Mechanic

- Protection class IP20.

EMC

- Filter class A included, optional upgrading to class B.

Diagnostic memory

- Retrieval of the last 3 operational faults.

Optional

- DIN rail mount adapter, brake resistor, setpoint potentiometer 10 kOhm, EMC filter class B.

Frequency Converters ROfre 897 (for 3-phase current Drives)

With Power Cable

With Power Cable and Emergency-Stop Button

- Protection class IP 54, i.e. can be used outside electrical cabinet.
- Completely wired with 2 m screened motor cable, 2 m mains cable with plug and potentiometer.
- Optional with integrated emergency-stop switch (right picture).
- Optional with selector switch for left-right.
- Optional with socket for external operation.

Ordering details: e.g.: 460 410 25, Frequency Converters ROfre 897, 0.25 kW Output Power without Emergency Stop

Prod. No.	Emergency Stop	Output Power kW	Output Voltage V	Output Current A	Input Voltage V	Input Current A	Input Fuse Protection A	Dimensions H x B x T mm	Weight kg
460 410 25	No	0,25	3 x 0-240	1,4	1 x 230	3,0	16	200 x 130 x 120	2,2
460 410 37	No	0,37	3 x 0-240	2,3	1 x 230	5,2	16	200 x 130 x 120	2,2

460 510 25	Yes	0,25	3 x 0-240	1,4	1 x 230	3,0	16	200 x 130 x 120	2,2
460 510 37	Yes	0,37	3 x 0-240	2,3	1 x 230	5,2	16	200 x 130 x 120	2,2
460 510 75	Yes	0,75	3 x 0-240	4,2	1 x 230	9,4	16	200 x 140 x 140	2,6

Output

- Rotating-field frequency 0-200 Hz.
- Voltage boost 10%.
- Overload 150% I_n / 60s.

Input

- Voltage 1 x 230 V +/- 10% 50/60 Hz.

Control unit

- Cycle rate: 4-16 kHz, adjustable in steps.
- Stop functions: Ramp (0.1-999s), DC braking, coast, brake with chopper from 1.5kW.
- Protection systems: Surge current (200% I_n), overload, IGBT excessive temperature, overvoltage, undervoltage.
- Analog input*: 0-10 V, 0-20 mA or 10kOhm potentiometer.
- Analog output*: 0-10 V (with current output frequency).
- Digital input*: Dry contacts or external 24 V DC industrial logic for start up, reversion of rotation. 2 programmable inputs (inching mode, fixed setpoint, emergency stop, reset, external control).
- Digital output*: Dry contact, programmable.
- Monitoring: Short circuit phase-phase or phase-earth.

* Only for optional version with socket for external operation.

Displays / Operating elements

- Control keys: Setting of system functions.
- Display: Operating mode and error message.
- Setpoint potentiometer: For continuous adjustment of speed.

Environment

- Ambient temperature: -10...+40°C.
- Cooling: Convection.
- Rel. humidity: 0...95% not condensing.

Mechanic

- Protection class IP20.

EMC

- Filter class A included.

Diagnostic memory

- Retrieval of the last 3 operational faults.

Small Geared Motors CRO, Version A

- Motor:** For 230V, 50Hz. Synchronous motor for both rotational directions (s. motor data overview).
- Gearbox:** Spur gears, straight toothed, made from plastic.
- Ambient temperature:** -5 to +70°C
- Capacitor:** Enclosed in delivery.

Ordering details: e.g.: Type, Version, Output Speed, Product No.

Motor data/Technical data

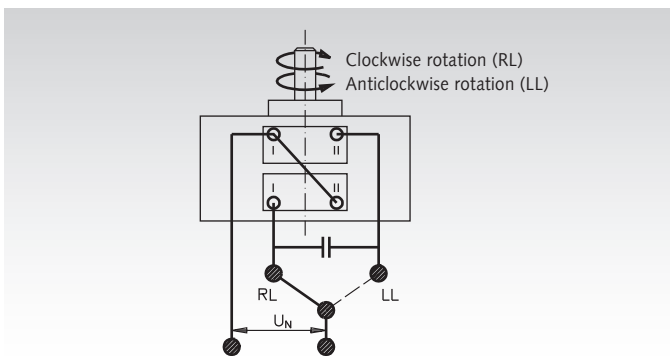

Moment of inertia for rotor	18.8 g·cm ²
Absorbed power	3.5 W
Stall torque ¹⁾	2.1 Ncm
Starting torque	1.9 Ncm
Max. coil temperature	120 °C
Ambient temperature	-5...+70 °C
Storage temperature	-40...+100 °C
Insulation resistance	>10 ³ MV
Electric strength (50 Hz)	> 2400 V
Weight of motor	210 g
Protection class	IP 40

Motor data/Technical data

Standard nominal voltage (-15 + 10%)	220 / 240 V
Absorbed power	16 / 17.3 mA
Frequency	50 Hz
Speed	375 min ⁻¹
Capacitor values ±10%	0.12 / 600 µf/V
Connection	A
Colours of leads for standard motors	Blue: Terminal 1 White Terminal 2

¹⁾ Max. torque of the motor at continuous operation with nominal voltage and frequency.

Wiring for parallel line connection A

Small Geared Motors CRO, Version B

- Motor:** For 230V, 50Hz synchronous motor for both rotational directions (see motor data overview).
- Gearbox:** Spur gears, straight toothed, made from plastic.
- Ambient temperature:** -5 to +70°C
- Capacitor:** Included in delivery.

Ordering details: e.g.: Type, Version, Output Speed, Product No.

Product No.	Standard Speed min ⁻¹	Weight kg
430 205 00	15	0,32
430 205 01	7,5	0,32
430 205 02	5	0,32
430 205 03	1	0,32
430 205 04	0,25	0,32

Torque-Speed Table

Max. perm. static load on bearing:
axial = 10 N, radial = 100 N

Motor data/Technical data

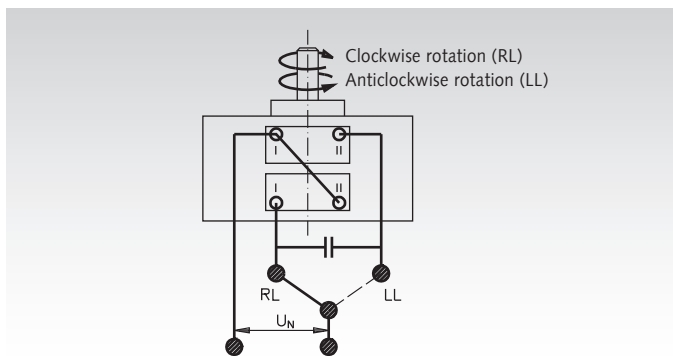

Moment of inertia for rotor	18.8 g·cm ²
Absorbed power	3.5 W
Stall torque ¹⁾	2.1 Ncm
Starting torque	1.9 Ncm

Wiring for parallel line connection A

Small Geared Motors GE/I with Capacitor Motor, AC

General data: Light model range, extremely high ratios.

Housing: Aluminium die-cast, sealed against lubricant leaks and protected against dust, can be mounted in any position.

Gearing: Depending on the arrangement of the gear stages milled from high-grade plastic or steel.

Bearing system: Motor: roller bearing. Gearbox: sintered bronze slide bearing.

Lubrication: Maintenance-free grease lubrication.

Motor: Capacitor motor for 230 V, 50 Hz, direction of rotation reversible. Pinion milled into motor shaft. The cable gland of the terminal box can be moved 4 x 90°.

Please note: At continuous operation the motor heats up to 70°C.

Ordering details: e.g.: Type, Product No. 430 401 00 Capacitor Motor
 Product No. 430 301 01 Gearbox 15:1
 Product No. 436 352 00 Operating Capacitor
 (has to be ordered separately)

Capacitor motor: Product No. 430 401 00, Weight 1.2 kg

Motor, gearbox and capacitor have to be ordered separately.

To prevent the gearbox from being overloaded, the max. continuous and starting torques stated above must not be exceeded. The effective transmissible torque corresponds to the values at the gearbox shaft.

Helical Small Geared Motor SF with DC motor, 24V

Housing: Steel, zinc-plated.

Can be mounted in any position.

Teeth: Steel gears.

Bearing: Sintered bronze plain bearings.

Lubrication: Maintenance free grease lubrication.

Motor: DC motor 24 V. motor speed 6500 min^{-1} , interference-free. Change the direction of rotation by switching the polarity.

Protection class acc. to EN 60529: IP 20.

Operating mode as per VDE 0530: S2-10 min.

Permissible ambient operating temperature: -10 to $+60^\circ\text{C}$.

Ideal drive for short term operation, e.g. for actuating device.

Ordering Details: e.g.: Type, idle speed, Product No.

Product No. 24V	Idle Speed n_0 min^{-1}	Nominal Speed n_N min^{-1}	Nominal Torque M_N Nm	Nominal Current I_N A	Nominal Power P_N W	Tightening Torque M_A Nm	Ratio i	Dimension L mm	Weight g

Factory interference suppression

Small Worm Geared Motors Type SG with Permanent Magnet DC Motor 24V

Housing: Aluminium, sealed against lubricant leaks and protected against dust, can be mounted in any position.

Output shaft: Optional on side 1 or side 2.

Teeth: Worm gear made from special brass, worm made from steel, hardened and ground.

Bearing: Motor and gearbox with roller bearing.

Lubrication: Maintenance free grease lubrication.

Motor: Permanent magnet DC Motor 24 V.

Nominal motor speed $3,000 \text{ min}^{-1}$, with relatively constant speed characteristics. Free lead ends. Sense of rotation can be changed by swapping leads over.

Protection class IP 40. Insulation class B. Operating mode S1.

Output shaft optional:
Side 1: like photo.
Side 2: like drawing.

Ordering Details: e.g.: Type, Power, Output Side, Output Speed, Product No.

Output shaft optional:
Side 1: like photo.
Side 2: like drawing.

Other dimensions:

Power Watt	g mm	k mm	k ₁ mm

Small Worm Geared Motors Type SG-H with Permanent magnet DC Motor 24V, with Hollow Shaft

Housing: Aluminium, sealed against lubricant leaks and protected against dust, can be mounted in any position.

Output shaft: Hollow shaft.

Teeth: Worm gear made from special brass, worm made from steel, hardened and ground.

Bearing: Motor and gearbox with roller bearing.

Lubrication: Maintenance free grease lubrication.

Motor: Permanent magnet DC Motor 24 V.

Nominal motor speed 3,000 min⁻¹, with relatively constant speed characteristics. Free lead ends. Sense of rotation can be changed by swapping leads over.

Protection class IP 40. Insulation class B. Operating mode S1.

Ordering Details: e.g.: Type, Power, Output Speed, Product No.

Planetary Small Geared Motor PE with DC Motor, Size 1

Housing: Steel, zinc-plated, sealed against lubricant leaks and protected against dust, can be mounted in any position.
Gearbox: 1st gear stage: plastic gears, other gears made from steel.
Bearing: Motor roller bearing. Gearbox: sintered bronze plain bearing.
Lubrication: Maintenance free grease lubrication.
Motor: DC motor 24 V. Nominal motor speed 6,000 min⁻¹, Pinion milled into motor shaft. Free lead ends.
 Sense of rotation can be changed by swapping leads over.
 Protection class according to VDE 0530: IP 21.
 Insulation class according to VDE 0530: E.
 Operating mode as per VDE 0530: S1.

Ordering Details: e.g.: Type, Size 1, Voltage, Output Speed, Product No.

Size 1

Product No. 24 V	Nominal Output Speed min ⁻¹	Ratio i	max. continous Torque Nm	max. Starting Torque Nm	Nominal Motor Power W	Output Power W	Gearbox Efficiency %	a mm	b mm	Weight kg
430 440 24	200	30:1	0,46	0,6	12	9,6	80	141	27	0,55

430 444 24	22	270:1	2,90	3,3	10	6,7	65	155	41	0,65

Permissible radial shaft load F_R : 30 N (middle shaft).

Permissible axial shaft load F_A : 0 N.

Tolerances +/- 10%.

Note

The efficiency stated in the table is valid for properly run-in gearboxes at operating temperature. To prevent the gearbox from being overloaded, the stated limit loads must not be exceeded. At reversed operation the limit loads must be multiplied with the factor 0.75.

Also available as an option with 12 V motors and larger gear ratio up to 54880:1.

Planetary Small Geared Motor PE with DC Motor, Size 2

Housing: Steel, zinc-plated, sealed against lubricant leaks and protected against dust, can be mounted in any position.

Gearbox: 1st gearbox stage: plastic gears, other gears made from steel.

Bearing: Motor roller bearing. Gearbox roller bearing / plain bearing.

Lubrication: Maintenance free grease lubrication.

Motor: DC motor 24 V. Nominal motor speed 3,000 min⁻¹. Pinion milled into motor shaft. Free lead ends. Sense of rotation can be changed by swapping leads over.

Protection class according to VDE 0530: IP 41.

Insulation class according to VDE 0530: F.

Operating mode as per VDE 0530: S1.

Ordering Details: e.g.: Type, Size 2, Voltage, Output Speed, Product No.

Size 2

Product No. 24 V	Nominal Output Speed min ⁻¹	Ratio i	max. continous Torque Nm	max. Starting Torque Nm	Nominal Motor Power W	Output Power W	Gearbox Efficiency %	a mm	b mm	Weight kg

Helical Geared Motors HR/I

Housing: Aluminium, corrosion-inhibiting coating, with mounting holes for foot and flange mounting and with removable twist cap for easy service.

Gearing: Hardened and ground.

Lubrication: Synthetic oil (lubricated for life).

Motor: Standard three-phase motor with small flange B14, 230/400V, 50 Hz.

From 0.75 kW in efficiency class IE2.

Other Motor versions (AC Motor, posistor, forced ventilation, break etc.) on request.

Light-weight, high-quality model range with many mounting options.

These maintenance free, geared motors without ventilation can be used in **any mounting position**.

Variable mounting:

These geared motors are supplied with a screwed-on foot mounting. If flange mounting is required or if the motor is to be mounted on an existing base plate, this foot can simply be unscrewed.

Retrofittable flange:

If the motor is to be flange mounted on the output side, a flange can be screwed on by the customer. These flanges B5 are available in several diameters and have to be ordered separately.

Ordering details: e.g.: Prod. No., Type, Motor Power, Output Speed
If required: Output Flange, Prod. No., Diameter

¹⁾ Radial load F_R max at $F_A = 0$.

²⁾ Axial load F_A max at $F_R = 0$.

Dimensions table page 718.

Note for Dimensioning

Three-phase motors have a very high starting torque. The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $M_{max.} = M_a \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation, factors for shock load and acceleration must be considered.

*Optionally also available with
additional manual adjustment
mechanism (on request).*

Output Flanges for Helical Geared Motors HR/I

Material: Aluminium.

Output-side flange for helical geared motor HR/I to be mounted by the customer, for modification from foot mounting B3 to flange mounting B5.

For every gearbox size there are flanges in several, common diameters available.

The flange is supplied with the required mounting screws and can be easily screwed on. The screwed on foot mounting can be taken off the gearbox, if required.

Ordering details: e.g.: Prod. No. 432 020 12, Output Flange for Gearbox Size 20/2 and 30/2

Lubricant Volume in Litre (dm³)

The gearbox is lubricated for life, using synthetic oil. At normal operating conditions, no change is required. The lubricant volume is the same for all mounting positions.

Helical Geared Motors NR/I

Housing: One-part, torsion-resistant block-shaped housing made from grey cast iron type GG20 or GGG40. The high torsional stiffness helps to achieve an optimum production accuracy, leading to low noise and thus a longer service life.

Gearing: The helical gearwheels are produced from forged blanks, the gears are case hardened and ground or scraped. The calculations were carried out according to DIN 3990.

Bearing system: Generously dimensioned roller bearings.

Shafts: \varnothing according to ISO k6. Feather key groove according to DIN 6885/1. Centering points with threads according to DIN 332/2.

Lubrication: The gear boxes are delivered filled with the correct level of oil or grease, which offers sufficient lubrication for about 10.000 operating hours, or for an operation period of 2 years, at a temperature of -5°C to $+40^{\circ}\text{C}$. When changing the lubricant, always clean the gearbox thoroughly.

Motor: 230/400 V, 50 Hz, according to DIN 40050-VDE 0530, IP 55, insulation class „B“ VDE 0530, temperature limit $+80^{\circ}\text{C}$ at max. ambient temperature of 40°C .

From 0.75 kW in efficiency class IE2.

Gearbox with higher power, other speeds, fitted brake motors, explosion-proof or dual-speed motors and other models on request.

Ordering details: e.g.: Type, Motor Power, Output Speed, Model, Product No.

¹⁾ Radial load F_R max at F_A = 0.

²⁾ Axial load F_A max at F_R = 0.

Dimensions table page 721.

Note for Dimensioning

Three-phase motors have a very high starting torque. The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $M_{\max.} = M_a \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation, factors for shock load and acceleration must be considered.

Note

Standard model is B3 (= catalogue product number). Other models on request. The model/mounting position must always be stated, as different models/mounting positions require different oil volumes and venting positions.

Worm Geared Motors

The worm geared motors on page 660 to 670 are delivered with the standard voltage 400 V for a mains frequency of 50 Hz. With help of the enclosed operating capacitor they can however be connected to 230 V, 50 Hz one-phase mains using the Steinmetz circuit. Please note that with this circuit, the power drops by 30 - 50% below the stated value.

The smaller gearboxes form a completely oil-proof and dust protected unit with the driving motors. The larger gearboxes are designed with ventilation. Before the start of operational use the sealing screw must be exchanged with the supplied venting screw.

All listed worm geared motors have the protection class IP 54 and can be supplied with an electromagnetically controlled disk brake (except for the 45 W motor on page 723). This makes the worm geared motor about 40mm longer.

The steel worms used are hardened and ground, while the worm gears are made from high-quality special brass with perfect gliding properties. In most applications, there is no relubrication or change of lubricant required. These worm geared motors are therefore suitable for low-maintenance applications.

Gearbox and shaft position according to the respective dimensional drawing. Required ordering specifications: Type, voltage/frequency with or without operating capacitor, motor data, transmission ratio/output speed, product no.

Steinmetz Circuit

The three-phase motor can be connected to one-phase mains with the circuit pictured on the right using a capacitor! On the following pages the required capacitors are matched with their respective worm geared motors.

To change the sense of rotation the phase L1 has to be disconnected from the terminal U1 and connected to the terminal W1.

Safety Note

Only qualified personnel should be authorized to work on the worm geared motors always regarding the safety regulations.

Before starting the assembly please read the enclosed operating and maintenance instructions.

Operating Capacitors KST

Aluminium housing, metal-polypropylene. For 30,000 operating hours. According to VDE to 25µF. The capacitors have a protective cap made from aluminium and a 180mm cable connected on the side. On the bottom there is a mounting screw with toothed lock washer and nut.

Technical Data:

Capacity tolerance $\pm 10\%$.

Frequency 50 to 60 Hz.

Voltage 400 V.

Loss $< 0.3\%$.

Temperature range -25 to $+85^\circ\text{C}$.

Insulation test voltage (2 Sec.) 2.5 kV (to ground).

Worm Geared Motors RS with Two-Stage Worm Gears

230/400V, 50Hz, I54, can also be connected to alternating current using an operating capacitor.

General data page 722.

Motor and gearbox with roller bearing.

Worms hardened and ground.

Worm gears made from special brass.

Ordering details: Type, Voltage/Frequency, possibl. Operating Capacitor, Motor Data, Ratio, Product No.

Worm Geared Motors HMD/I

Housing: Aluminium, corrosion-inhibited coating, with mounting holes for flexible foot and flange mounting.

Worm shaft: Hardened and ground.

Worm gear: Bronze on grey cast iron hub.

Lubrication: Synthetic oil (lubricated for life).

Motor: Standard three-phase motor with small flange B14, 230/400V, 50Hz. **From 0.75 kW in efficiency class IE2.**

Other motor versions (AC motor, posistor, forced ventilation, brake etc.) on request.

Light-weight, high-quality model range with many mounting options. These maintenance-free, geared motors without ventilation can be used in **any mounting position**. The mounting positions V5 and V6 (worm shaft vertical) are however not recommended for continuous operation.

Output shaft push-in type: The basic gearbox version has a hollow shaft. They can, however, also be supplied with a push-in type output shaft (single sided, to be used left and right, or double sided). These output shafts have their own product number and have to be ordered separately.

Variable mounting: The geared motors are supplied without foot mounting. The foot mounting, which has to be ordered separately, can however easily be screwed on, if a foot mounting is required. The position of the foot can be changed for different mounting positions.

Retrofittable flange: If an output-side flange mounting is required, this flange can easily be mounted by the customer. These flanges have their own product number and have to be ordered separately.

Ordering details: e.g.: Prod. No., Type, Motor power, Output Speed
If required: Output shaft single sided (or double sided), Prod. No., Gearbox Size
Foot Mounting, Gearbox Size, Prod. No.
Output Flange, Gearbox Size, Prod. No.
Torque Arm, Gearbox Size, Prod. No.

P = Power
 n_2 = Output Speed
 T_2 = Output torque

f_B = Operating factor
 i_{ist} = Ratio

Accessories Worm Geared Motors HMD/I

Push-In Output Shafts HMD, Single Sided

Material: Steel.

To change the gearboxes HMD/I over from hollow shaft to solid shaft. The shaft is only pushed in and secured with the enclosed cover disc and mounting screw.

Ordering details: e.g.: Prod. No. 438 031 00, Push-In Output Shaft, Single Sided, Gearbox Size 030

Product No.	Gearbox Size	B mm	C mm	D mm	E mm	F mm	L mm	O mm	t ₂ mm	Weight kg

Push-In Output Shafts HMD, Double Sided

Material: Steel.

To change the gearboxes HMD/I over from hollow shaft to solid shaft. The shaft is only pushed in and secured with the enclosed cover disc and mounting screw.

Ordering details: e.g.: Prod. No. 438 032 00, Push-In Output Shaft, Double Sided, Gearbox Size 030

Product No.	Gearbox Size	B mm	C mm	D mm	E mm	F mm	L mm	O mm	t ₂ mm	Weight kg

Foot Mountings HMD/I

Material: Steel sheet, zinc plated.

Retrofit kit: Foot mounting.

The position of the feet can be changed by 4x90 (Size 063: 8x 45°). 8 mounting screws are included in the delivery (4 screws per side).

Ordering details: e.g.: Prod. No. 438 033 00, Foot Mounting, Gearbox Size 030

Permissible Radial and Axial Loads

The values are calculated for the middle of the input shaft end also calculating in the output speed n_2 in min^{-1} . F_R is the max. permissible radial load for $F_A = 0$. F_A is the max. permiss. axial load for $F_R = 0$.

Gearbox Size	200 min^{-1}		150 min^{-1}		100 min^{-1}		75 min^{-1}		50 min^{-1}		25 min^{-1}		15 min^{-1}	
	F_R N	F_A N	F_R N	F_A N	F_R N	F_A N	F_R N	F_A N	F_R N	F_A N	F_R N	F_A N	F_R N	F_A N

Lubricant Volume in Litre (dm³)

The gearbox is lubricated for life, using synthetic oil. At normal operating conditions, no change is required. The lubricant volume is the same for all mounting positions. The mounting posi-

tions V5 and V6 (worm shaft vertical) are however not recommended for continuous operation.

Size	030	045	050	063	085
Oil volume	0.03	0.09	0.14	0.40	1.20

Note for Dimensioning

Three-phase motors have a very high starting torque. The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $T_{max.} = T_2 \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation, factors for shock load and acceleration must be considered.

Optionally also available with additional

manual adjustment mechanism

(on request).

Worm Geared Motors HMD/II

Housing: Aluminium, corrosion-inhibiting coating, with mounting holes for flexible foot and flange mounting.

Worm shaft: hardened and ground.

Worm Gear: Bronze, on cast iron hub.

Lubrication: synthetic oil (lubricated for life).

Motor: Standard three-phase motor with small flange B14, 230/400V, 50Hz. **From 0.75 kW in efficiency class IE2.**

Other motor versions (AC motor, posistor, forced ventilation, brake etc.) on request.

Lightweight, high quality model range. These maintenance-free geared motors, without ventilation can be used in any mounting position. The mounting positions V5 and V6 (worm shaft vertical) are however not recommended for continuous operation.

Output shaft push-in type: The basic gearbox version has a hollow shaft. They can, however, also be supplied with a push in type output shaft (single sided, to be used left and right, or double sided). These output shafts have their own product No. and have to be ordered separately.

Variable mounting: The gearboxes are supplied with mounting holes on all sides.

Retrofittable flange: If an output-side flange mounting is required, this flange can easily be mounted by the customer. These flanges have their own product number and have to be ordered separately (Flange type, either square or round).

Ordering Details: e.g.: Product No., Type, Motor power, Output Speed

If required: Output shaft single sided (or double sided), Product No., Gearbox Size
Output Flange, Gearbox Size, Prod.-No.

Torque Arm, Gearbox Size, Prod. No.

Accessories Worm Geared Motors HMD/II

Push-In Output Shafts HMD, Single Sided

Material: Steel.

To change the gearboxes HMD/II over from hollow shaft to solid shaft. The shaft is only pushed in and secured with the enclosed cover disc and mounting screw.

Ordering Details: e.g.: Product No. 438 031 00, Push-In Output Shaft, Single Sided, Gearbox Size 030

Product No.	Gearbox Size	B mm	C mm	D mm	E mm	F mm	L mm	O mm	t ₂ mm	Weight kg

Push-In Output Shafts HMD, Double Sided

Material: Steel.

To change the gearboxes HMD/II over from hollow shaft to solid shaft on both sides. The shaft is only pushed in and secured with the enclosed circlip.

Ordering Details: e.g.: Product No. 438 032 00, Push-In Output Shaft, Double Sided, Gearbox Size 030

Product No.	Gearbox Size	B mm	C mm	D mm	E mm	F mm	L mm	O mm	t ₂ mm	Weight kg

Permissible Radial and Axial Loads

The values are calculated for the middle of the input shaft end as a function of the output speed n_2 in rpm. F_R is the max. permissible radial load for $F_A = 0$. F_A is the max. permissible axial load for $F_R = 0$.

Gearbox Size	200 min ⁻¹		150 min ⁻¹		100 min ⁻¹		75 min ⁻¹		50 min ⁻¹		25 min ⁻¹		15 min ⁻¹

Lubricant Volume in Litre (dm³)

The gearbox is lubricated for life, using synthetic oil. At normal operating conditions no change is required. The lubricant volume is the same for all mounting positions.

The mounting positions V5 and V6 (worm shaft vertical) are however not recommended for continuous operation.

Size	030	045	050	063	085
Oil volume	0.03	0.09	0.14	0.30	1.20

Note for Dimensioning

Three-phase motors have a very high starting torque. The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $T_{max.} = T_2 \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation,

factors for shock load and acceleration must be considered.

Accessories Worm Geared Motors HMD/II

Output-side Flanges HMD/II, square

Material: Aluminium.

Square flange with fixing screws for retrofitting.

Ordering Details: e.g.: Product No. 439 033 00, Output-Side Flange, 70 x 70 mm

Product No.	Gearbox Size	D mm	B mm	O ₁ mm	S mm	T ₁ mm	V mm	W mm	Z mm	Screws Amount x size	Weight kg

Worm Geared Motors ZMD/I

General data: Versatile, high-performance gearboxes. 4 sizes, centre distance 40, 50, 63 and 80 mm. Centre distance 100 - 315 mm available on request.

Housing: High-quality grey cast iron, all sides machined and with mounting holes on 4 sides.

Gearing: 12 ratios from 5 to 83 : 1; worm shaft hardened and ground. Worm gear made from special centrifugally cast bronze.

Efficiency factor: The efficiency factors stated in the selection tables are guideline values for properly run-in and lubricated gearboxes at operating temperature with nominal load and driving worm shaft. Proper running in is a crucial factor influencing the lifetime of the gearbox. The starting efficiency factor (η_A) is, as the operating efficiency factor (h), depending on the lead angle.

Self-locking: Self-locking only occurs in worm gear units, when the unit cannot be driven from the output side. Worms with 4 and 6 threads sometimes permit transmission ratios for gearing up ($i = 5 : 1$ to $13,3 : 1$). If a gearbox must be implicitly self-locking, or must implicitly not be self-locking, we urge you to contact us.

Bearing system: All gearbox shafts with generously dimensioned roller bearings.

Lubrication: The gearboxes are lubricated for life using synthetic oil. Under normal operating conditions, no maintenance is required. The housing should be checked for leakages at an interval of approx. 2 years.

Ventilation: Size (centre distance) 40 is supplied without ventilation. With the other gearboxes, the seal plug has to be exchanged with the separately packed venting filter.

Motor: From 0.75 kW in efficiency class IE2. Datas page 748.

Version A with output-side shaft right, on request also on the left or double sided (without picture).

Version HL with output-side hollow shaft.

Position of terminal box: standard on top (against photo).
Output flange and foot mounting available at extra charge.

Weights

Gearbox Size	kg	Motor	kg
40	7	63 S/L	5 / 6
50	12	71 S/L	7 / 8
63	18	80 S/L	10 / 11
80	28	90 S/L	18 / 22

Venting Filter (VF)

Size	A mm	B mm	C mm	D mm	E mm	F mm
40	-	-	-	-	-	-
50	50	20	33	22	58	25
63	62,5	27,5	37	22	67	25
80	77,5	32,5	57	22	82	25

Lubricant Volume in Litre (dm³)

Size	Mounting Position			
	1	2	3 + 4	5 + 6
40	0,20	0,25	0,20	0,20
50	0,30	0,60	0,45	0,45
63	0,50	1,10	0,70	0,80
80	0,90	2,10	1,40	1,60

The standard lubrication volume is calculated for mounting position 2. For other mounting positions and high permanent speeds it might have to be reduced, to prevent oil leakages.

Position of Oil Fittings Gearbox Size 50 - 80

Mounting Sides

The worm gear units can be mounted in any position and the shaft ends can be positioned to your order.

Sizes 40 - 80

Dimensions table page 747.

Note for Dimensioning

Three-phase motors have a very high starting torque T_{2A}.
The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $T_{max.} = T_{2 nom.} \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation,
factors for shock load and acceleration must be considered.

Permissible Radial Loads F_R [N] for Normal Output Shaft and Bearing System

The values for permissible radial loads stated in the table are calculated for the centre of the output shaft end, also calculating in the output speed and nominal output torque. The values were calculated for the most unfavourable load direction.

The perm. radial loads only apply to unilateral load. If in your application high radial loads occur in combination with axial loads, we ask you to contact us.

Gearbox Size	Output Torque Nm	Permiss. Radial Load [N] at Output Speeds n ₂ [min ⁻¹]

Dimensions Table Worm Geared Motors ZMD/I

Output flange and foot mounting brackets can be delivered at extra charge.

Position of terminal box: standard on top.

Surfaces (1) to (6) are all machined. Apart from side (3), they can serve as mounting surfaces. The foot mountings F can be attached to surfaces (1), (2) and (4). Surfaces (5) and (6) serve to attach the flange BF. The geared motor can turn in any position. The required mounting position has to be stated in

the order. Feather keys and grooves according to DIN 6885/1. Shaft ends with thread alignment according to DIN 332/2. As standard, the terminal box is mounted on side (2). It can be turned by $4 \times 90^\circ$. On request, side (4) can accommodate the shaft end. The speed of this shaft end is equal to the speed of the motor.

Three-Phase Motors

The following single-phase motors conform to DIN IEC 34-1.

From 0.75 kW in efficiency class IE2.

Other types (dual-speed, one-phase AC, brake motors) on request. The nominal power is calculated for continuous operation, operation mode S1, at nominal voltage and nominal speed

calculated for a max. temperature of the cooling agent of 40°C and an altitude of 1,000 m above sea level.

The motors are supplied with a normal voltage of 230/400 V (permiss. voltage fluctuation +6% and -10%). Other voltages and frequencies available on request.

Worm Helical Geared Motors SZM/I

General data: Versatile, high-performance geared motors, 3 sizes, centre distance 50, 63 and 80 mm. Up to centre distance 125 mm, on request.

Housing: High-quality grey cast iron, all sides machined and with mounting holes on 5 sides.

Gearing: Helical gear ratio between 2,5 and 8,9 : 1 and worm gear ratio between 5 and 83 : 1, allow precisely tuned output speeds from 3,0 to 114,6 min⁻¹. One-stage helical gear stage, made from special steels, hardened and ground, worm shafts hardened and ground, worm gears made from special bronze.

Motor: From 0.75 kW in efficiency class IE2. Datas page 699.

Output flange and foot mounting brackets can be delivered at extra charge.

Bearing system, Efficiency, Self-Locking, Permissible Radial Loads, Lubrication see worm gear units Type ZM/I page 685.

Version A with output-side shaft on the right, on request shaft can be provided on the left or on both sides (without picture).

Version HL with output-side hollow shaft.

Ordering details: e.g.: Type, Version, Motor power, Output Speed, Mounting Position, Connecting Side, Shaft Position, Product No.

Venting Filter (VF)

Gearbox Size	A mm	B mm	C mm	D mm	E mm	F mm	G mm	H mm	I mm	K mm
50	98	23	116	20	62	6	25	10	80	78
63	105	23	123	20	69,5	6	35	10	92	93
80	126,5	23	149,5	20	79,5	7	42,5	5	111,25	124

Lubricant Volume in Litre (dm³)

Gearbox Size	Mounting Position			
	1	2 + 3	4	5 + 6
50	0,5	1,0	1,0	0,8
63	0,8	1,5	1,8	1,2
80	1,3	2,5	3,2	2,0

The standard lubrication volume is calculated for maximum (for mounting position 4). For other mounting positions and high permanent speeds it might have to be reduced, to prevent oil leakages.

Weights

Gearbox Size	kg	Motor	kg
50	14	63 L	6
63	20	71 S/L	7 / 8
80	35	80 S/L	10 / 13

Other power ratings and output speeds on request.

Note for Dimensioning

Three-phase motors have a very high starting torque T_{2A}.
The max. permissible, stability related torque of the gearbox is the product of output torque and operating factor: $T_{max.} = T_{2 nom.} \times f_B$

This torque must never be exceeded.

Furthermore, depending on kind of operation, factors for shock load and acceleration must be considered.

Dimensions Table Worm Helical Geared Motors SZM/I

Output flange and foot mounting brackets can be delivered at extra charge.

Position of terminal box: standard on top.

With Hollow Shaft

Flange Version

Surfaces (1) to (6) are all machined. Apart from side (3), they can serve as mounting surfaces. The foot mountings F can be attached to surfaces (1), (2) and (4). Surfaces (5) and (6) serve to attach the flange BF. The geared motor can turn in any position. The required mounting position has to be stated in the order. Feather keys and grooves according to DIN 6885/1. Shaft ends with thread alignment according to DIN 332/2. As

standard, the terminal box is mounted on side (2). It can be turned by $4 \times 90^\circ$. On request, side (4) can accommodate the shaft end. The speed of the shaft end is calculated from $n_2 \times$ transmission ratio of the worm gear stage as stated in the performance table.

Three-Phase Motors

The following single-phase motors conform to DIN IEC 34-1.

From 0.75 kW in efficiency class IE2.

Other types (dual-speed, one-phase AC, brake motors) on request. The nominal power is calculated for continuous operation, operation mode S1, at nominal voltage and nominal speed calculated for a max. temperature of the cooling agent of 40°C

and an altitude of 1,000 m above sea level.

The motors are supplied with a normal voltage of 230/400 V (permis. voltage fluctuation +6% and -10%). Other voltages and frequencies available on request.

Continuously Variable Geared Motors MUN/I

- Motor 230/400 V, 50 Hz.
- Input power 0,18 kW.
- Output torque to 70 Nm.
- Output speed 0.17 to 4200 min⁻¹
- Adjustment range 1 : 9.
- Adjustable with motor stopped.
- Constant speed, smooth running, long life time and high efficiency.
- Lubricated for life, thus maintenance free.
- Can be mounted in any position (apart from Size 250 and 260).

Working Principle

Two axially-parallel hollow-cone disks are mounted, with pre-tension, around a steel ball. The ball rolls, at almost punctiform point of contact, over the hollow-cone disks and transfers the power from the input shaft - maintaining the sense of rotation - onto the output shaft. The system works at both rotational directions. A slidable ball track on the control device continuously changes the transmission ratio between input and output shaft. This allows an adjustment range from 3 : 1 to 1 : 3, i.e. a total value of $R = 9$. The adjustment of the speed is done with an adjustment screw. To pass through the entire adjustment range 10 full turns are required.

Attachments for the Input Side

Attached Motor

The input is done by a B14 standard motor. As standard, 4-pole, three-phase motors, three-phase explosion proof or one-phase AC motors are used. The motor dimensions stated in the dimensions tables refer to three-phase standard motors.

Attention

When three-phase explosion proof or one-phase AC motors are used, the overall dimensions change. Please ask for the respective dimensions tables!

Attachments for the Output Side

To adjust the output speeds to the specific circumstances the following can be mounted:

- Helical gear unit, 1 to 7 stage.
- Helical and, on request, bevel gear units.
- Worm gear units.

Standard Adjustment Device

To pass through the entire adjustment range 10 full turns of the handwheel are required. The adjusting collar is marked with a linear scale of 1 - 10, which is however not directly connected to the output speed, as the adjustment graph shows an almost logarithmic curve progression.

Linear Actuator Systems GR/I

General description:

Linear actuator, control box and hand operator make a ready-to-operate linear drive.

Voltage supply 230V or 24V on choice.

Up to 4 linear actuators can be operated with only one hand operator.

Usage: Universal use, for operating windows, gates, and for many other processes with swivel motion or linear motion.

Linear actuators, control box and hand operator have to be ordered separately.

Linear Actuators GR/I

2 speeds.

8 stroke lengths. Other lengths in 50mm steps on request.

To be used with 230V AC or 24V DC-control box.

Motor voltage 24V DC. Protection class IP 43. Cabel length approx. 1,2 m.

Up to 4 actuators can be operated separately with only one hand operator.

Linear actuators, control box and hand operator have to be ordered separately.

Linear Actuator Systems GR/I

Control Boxes for Linear Actuators GR/I

Material: Housing in shock resistant, black plastic.

For voltage supply and processing the actuators.

On choice for 230V AC or 24V DC.

On choice for 1 actuator, 2 actuators or up to 4 actuators.

Limit switch and overload protection are integrated.

230V-version with IEC power cord with plug, cable length approx. 2.5 m.

24V-version with 2 m-connecting cable.

Protection class IP 43.

Ordering details: e.g.: Prod.-No. 475 190 01, control box 230V for 1 actuator

Product No.	Voltage supply	Suitable for	Length L mm	Distance L _B mm	Weight kg
475 190 01	230V AC	1 actuator	216	200	1,60
475 190 02	230V AC	1-2 actuators	216	200	1,66
475 190 04	230V AC	1-4 actuators	320	306	1,98
475 191 01	24V DC	1 actuator	216	200	0,80
475 191 02	24V DC	1-2 actuators	216	200	0,86
475 191 04	24V DC	1-4 actuators	320	306	1,18

Hand Operators for Linear Actuators GR/I

Material: Housing in shock resistant, black plastic.

For operating the linear actuators.

To be used with 230V AC or 24V DC control box.

On choice for 1 actuator, 2 actuators or up to 4 actuators.

The actuators can be operated separately by holding down the key.

With spiral cable, length 1m, tensiled approx. 2m.

Protection class IP 54.

Ordering details: e.g.: Prod. No. 475 192 01, Hand operator for 1 actuator

Product No.	Suitable for	Number of Keys	Weight kg
475 192 01	1 actuator	1 pair of keys	0,20
475 192 02	1-2 actuators	2 pair of keys	0,22
475 192 04	1-4 actuators	4 pair of keys	0,24

**Alternatively to the Hand Operator:
Connecting cable for customer's controller.**

Linear Drives (lifting devices) SFL 12 V - 24 V

Housing: Motor: Steel, zinc-plated. Gearbox: Aluminium.
Can be mounted in any position.
Gearbox: Metal gears, trapezoidal thread nuts made from plastic.
Bearing: Plain bearings.
Lubrication: Spindle nut must be greased by the customer.
Motor: DC motor 12 V or 24 V switching voltage, interference-free.
Change the direction of rotation by switching the polarity.
Protection class acc. to EN 60529: IP 30. Operating mode as per VDE 0530: S2.

Universal use linear drives, e.g. for actuating devices.
Either with or without Hall-IC for positioning, end position limit or speed control. For Spindle Tr. 10 x 3 mm.
The required spindle length depends on the required stroke length.
The spindles have to be ordered separately. Mounting eye and stop block qfor spindle ends are included with the linear drive.

Ordering Details: e.g.: 1 Piece Product No. 475 201 01, Linear Drive 1000N without Hall IC (Spindles have to be ordered separately).

Spindle has to be ordered separately.

1) Nominal lifting power. 2) Nominal current. 3) Maximum lifting power. 4) Idle speed. 5) Maximum duty cycle.
* Datas in brackets are valid for 12V-Operation.

Speed controllers Page 696

Connecting Cable for Linear Drives with Hall-IC

Product No. 475 201 10 Connecting cable with one Molex plug for linear drives SFL with Hall-IC, length 500mm

Note

All values are averages, measured with the motor cold. Deviations of 10% are possible. To prevent the gearbox from being overloaded, the stated limit loads must not be exceeded.

Important: The thread of the spindle nut has to be greased by the customer!

Factory interference suppression

Spindles for linear drives (lifting devices) SFL

Material: Choice of C15 Steel or Stainless Steel 1.4305.

Design: Either ready-to-use for 300mm stroke lengths or by the metre for further processing by the customer.

Caution: Due to kinking, the max stroke length under compressive loads is limited to 300 mm.

The spindle has to be adequately lubricated before screwing in and operating (with normal machine grease).

Mounting eye and stop block are included with the linear drive.

Ordering Details: e.g.: 1 Piece Spindle Product No. 475 201 30 for stroke lengths 300mm

Product No.	Length mm	Material	Weight g	Design
475 201 30	383	Steel C15	230	Ready-to-Install. For stroke lengths 300mm.
640 010 00	1000	Steel C15	600	Sold by the metre, for further processing by the customer.
640 990 10	1000	Stainless Steel	600	Sold by the metre, for further processing by the customer.

Lifting Devices & complete Systems

MÄDLER® is not only a supplier for single screw jack gearboxes and motors. We also deliver complete lifting systems, ready to install.

- Screw jacks with cube housing.
- Screw jacks with classic housing.
- Safety nuts.
- Foot mounted motors (B3).
- Face-mounted motors (B14) with adaptor and elastic coupling.
- Backlash-free couplings.
- Bevel gearboxes.
- Connecting shafts.
- Additional parts (bellows, flange plates, hand wheels,etc).

Actuators, control boxes and hand operators have to be ordered seperately.

Ready assembled according your wishes!

Worm Gear Screw Jacks NP/I

Housing: Up to size 3 made from aluminium alloy in die-cast version. Size 4 made from grey or spheroidal cast iron. All sides machined. As standard filled with lubricant.

Gearing: Worm made from ETG100, Gear made from Gbz12. Self-locking to a certain extent. Vibration, an increase in the spindle pitch or the use of rolling screw elements release the self-locking. In this case, e.g., a brake motor should be included in the system. For lower stroke speeds, worm gear sets with higher transmission ratios can be supplied on request.

Spindle: Material C15, from size 4 C45. On request also available as left-hand, stainless steel or ball screw version.

Protective sleeve: The versions A and B are, unless stated otherwise in the order, supplied with a protective sleeve.

Versions

Version A: With this standard version the threaded spindle moves 1 mm in axial direction with every full rotation of the worm shaft. The spindle has to be secured against twisting.

Version B: Is the same as version A, but inside the gear unit a groove secures the spindle over its entire length against twisting. Thus the load can simply be applied.

Version C: In this version the spindle is fixed to the worm gear. The axial movement is taken over by the threaded nut running outside the gear unit (also 1 mm stroke per full rotation of the worm shaft).

Versions A and B are available with an optional spindle end safety feature. This means the threaded spindle is locked before the safety sleeve is mounted, to limit the stroke in extended position so that

the spindle cannot be screwed out of the gear unit. Attention: this safety feature means the safety sleeve is by about 20 mm longer.

The product numbers below only refer to the basic gear units without spindle. Please ask for the price of the complete unit including spindle and accessories as, e.g., flange plate/travelling nut, below or coil spring cover, fastening strips. On request a version for lower stroke speed can be supplied.

Technical Data and Dimensions Tables

Version A: Standard version.

Version B: With anti-rotation guide.

¹⁾ For other stroke lengths on request. Alternatively with coil spring cover.

²⁾ With other stroke lengths the dimensions change! Extension has to be calculated for the dimensions C₃ Page 762.

End Switches ES-2 with Roller Push Rod

Optional Accessories for Worm Gear Screw Jacks. For end position switching off. Mounting for screw jacks version A and B in protective tube. Special versions of protective tube and spindle are required for this. The end switches have to be ordered together with the jack.

Ordering Details: e.g.: Worm Gear Screw Jack Type ... with two end switches ES-2 mounted in the protective tube.

Dimensions: Overall length x width x height = 111 x 31 x 33mm.
NC and NO contacts switch simultaneously.

Minimum operating rate 0.01m/s.

Fastening threads M18.

Wiring M20x1.5

Protection class IP65.

Connecting Shafts Page 766

Operating Time Worm Gear Screw Jacks NP/I

The stroke force and stroke speed predetermine which model and size should be chosen. A further decision criterion is the heating up caused by friction. To keep this value within limits, the nominal values must be corrected, using a temperature factor (f_t). The heating-up process depends on the operating time (OT) per time unit (in %).

For stroke speed $V_H = \text{const.}$ applies: $F_{\text{eff}} = F_{\text{Nom.}} \cdot f_t$

For stroke force $F = \text{const.}$ applies: $F_{\text{eff}} = \text{effective stroke force}$
 $F_{\text{Nom.}} = \text{Nominal stroke force for model and size}$

OT- f_t -Diagram Example: OT = 40% = A $f_t = 0,2$

Buckling

Euler-Case 1 $f_k=0.5$

Version A and B
unguided stroke
fixed gear unit

Euler-Case 2 $f_k=1$

Version A and B
guided stroke
with swivel plate

Euler-Case 3 $f_k=1.4$

Version A and B
guided stroke
fixed gear unit

Euler-Case 4 $f_k=2$

Version C
for small L_1 applies: $f_k = 1.4$
(Euler 3)

Buckling Force P_k [N]

Example

Worm Gear Screw Jacks with Tr 40 x 7 and a spindle length of 2000 mm (stroke + nut + overrun), assumed safety factor $S_k = 4$
 P_k from table: 15,000 N

Mounting set up Euler 1 = $P_{k \text{ perm.}} = 15,000 \times 0.5 \times 1/4$
 Mounting set up Euler 2 = $P_{k \text{ perm.}} = 15,000 \times 1.0 \times 1/4$
 Mounting set up Euler 3 = $P_{k \text{ perm.}} = 15,000 \times 1.4 \times 1/4$
 Mounting set up Euler 4 = $P_{k \text{ perm.}} = 15,000 \times 2.0 \times 1/4$

Connecting Shafts W, backlash free, with half shell clamp

Material: Hubs and tube made of aluminium (stainless steel on request).
Insert made of elastomere, shore hardness 64D.

- Zero backlash, insertable elastic connecting shaft.
- Vibration-damping, ideal for connecting of gearbox shafts.
- Compensation of large shaft misalignment.
- With half shell clamp hubs, ready-to-install, for rapid mounting / demounting without removal of the other units.

Temperature range: 0°C to +70°C (at lower charge: -20°C to + 100°C).

Every shaft will be custom made in short time.

Delivery time: Regularly only 7 days.

Length: The total length L_A can be chosen stepless in a wide range.

Boreholes: The bores can be chosen in a wide range.

Ordering details: Type, size - total length L_A - bore / bore - speed¹⁾.

The product no. will be created in accordance with the customer's specifications.

Example: **W1 - 0934 - 12 / 16 - 1500**

Note: Total length and speed must be specified with 4 digits.

Type Size	Torques		Length L_A for choosen mm	Boreholes d for choosen ³⁾ mm	D_H mm	D_R mm	l mm	L_W mm	s mm	Weight Couplings kg	Weight Tube kg/m
	$T_{K \text{ nom.}}^{2)}$ Nm	$T_{K \text{ max.}}^{2)}$ Nm									
W1	12	25	99-3000	9-16	32	30	34	15	1,5	0,14	0,58
W2	17	34	133-3000	11-22	42	40	46	17	1,5	0,36	0,76

Max. shaft disalignment

Max. speed in relation to the total length L_A

Further models on request

One side stiff:

One side stiff, other side with elastic coupling.
For example for use with a pillow block bearing at the stiff side.

Both sides stiff:

Both sides stiff, without any elastic coupling.
To use only, if there is no misalignment.

Stainless steel:

All models are also available in stainless steel (couplings and also the tube).

MÄDLER®-Tools

General Description and Technical Notes

General Description and Application

High-quality, maintenance-free, ball bearing precision slides for various applications in machines and appliances used in trade or industry:

e.g. vending machines, automated pay stations, production plants, for protected storage of input or monitoring devices on computer controlled machine tools and production lines, pull-out shelves, cover hoods etc. In vehicles (mobile workshop, fire rescue or first aid trucks/vehicles, passenger trains) and aeroplanes pull-out objects also facilitate an optimum utilization of the available space.

Material

Slide elements: Cold-rolled steel, in part stainless steel 1.4301.
Ball retainers: Pre-plated cold-rolled steel, in part stainless steel or plastic.
Balls: Bearing steel, hardened, in part stainless steel.

Lubrication and Temperature Range

Maintenance free: Lubricated for life with low-temperature grease, -20°C to +120°C.
 No relubrication required.
 Temperature range: -17°C to +70°C.

Surface Protection

Zinc plated, bright, some parts passivated black or painted white. Type DH3832 with special zinc coating for extra strong corrosion protection (stainless steel parts have their natural colour).

Selection and Dimensioning

For easy selection we recommend using the selection table on page 771 considering the following criteria:

- 3/4 or full extension.
- Load rating.
- Additional features.
- Surface finish / material.
- Outer dimensions.

An optimum sliding action is achieved under load. The slides should therefore never be heavily over-dimensioned.

Travel

Difference regarding 3/4 extension and full extension:

3/4 Extension: Two-part slides allow a travel of about 75% of the slide length.

Full extension: Three-part slides allow a travel of about 100% of the slide length. Some of these types offer an even larger travel (over extension). Type 2026 offers 3/4 extension in both directions.

All other types can only be pulled out in one direction.

Accuride

Additional Features

Depending on the slide type, all slides are equipped for different special requirements:

- **Fast disconnection:** Allows easy disconnection of the drawer.
- **Hold-in:** Holds the drawer in closed position.
- **Hold-out:** Holds the drawer in open position.
- **Locking:** Locks the drawer in closed and/or open position. A lever must be actuated to move the slide.
- **Self close:** A spring mechanism retracts the pulled-out slide.
- **Bracket mount:** For an optimum side or bottom/platform mounting. With Type DZ 2109 the brackets included.

For Types DZ 2132, 3832, 3832SC/DO, 7957, 9301 and 9308 brackets can be ordered separately.

Optional brackets to mount slides inside electrical cabinets can be supplied on request. Some slide types also offer the possibility to adjust the drawer fronts with special adjusting cams.

Load Bearing Capacity

The stated load ratings relate to the maximum permissible load for a pair of vertically mounted slides (side mounted slides). For horizontally (flat) mounted slides the load bearing capacity is reduced to only 25% of the stated load rating. The load ratings refer to a load applied to the midpoint of the slide, at a travel of 450 mm. The stated load ratings are dynamic values. For static set ups the value can at max be doubled.

Mounting

Optimum movement is achieved under slight tensile force. The mounting width should therefore exceed the slide width by 0.2 to 0.5 mm. After mounting, the slides should be checked for easy movement, and if necessary be adjusted. If no easy sliding movement can be achieved, the mounting set up should be checked regarding width, alignment and angularity.

Mounting Width X
 = Slide Width +0,2 / +0,5 mm

Slides Selection Table

The slides in the table are sorted as follows: 1. According to the extension type: Partial or full extension / over extension.
2. Within the extension type: according to load rating, from low to high.

Slide Type	Page	Travel	Load kg	Width x Height mm	Fast Disconnect	Hold In	Hold Out	Locking 1)	Self Closure	Optional Mounting Brackets	Surface Finish or Material

1) A = Locks in open position. E = Locks in closed position.

2) Partial Extension in both directions.

3) Opens by pressing on the drawer (grip or knob not required).

Other Accuride® Products on request.

Linear guides on page 810

Slides DZ 2109, Width 12.7* mm, with Bracket Mounts, to 35 kg, 3/4 Extension

Material:

Slide elements: Cold-rolled steel, bright zinc plated.

Ball retainers: Cold-rolled steel, zinc-plated.

Balls: Hardened steel.

Telescopic ball bearing slides, especially suited for keyboard trays.

- Fast disconnection.
- Hold-in in closed position and hold-out in open position.
- Height-adjustable bracket mount included.
- Optional clip-on bracket (page 808).
- Especially long service life, up to 50,000 cycles!

Ordering details: e.g.: Prod. No. 649 062 30, Slides DZ 2109, with Bracket Mounts

Product No. per Pair	Slide Length mm	Travel +/-3,2 mm	A mm	B mm	C mm	D mm	E mm	F mm	Load Rating per pair kg	Weight per Pair kg

in the section **MÄDLER®-Tools**

Slides DZ 2002, width 9.5 mm, up to 35 kg, extension in both directions

Material:

Slide elements: Cold-rolled, bright zinc-plated steel.
Ball retainers: Cold rolled, zinc-plated steel.
Balls: Hardened steel.

Telescopic precision ball bearing slides for applications in the industrial and electronics sector.

- Hold-in in the centre position.
- Forward and return slide. For applications, that require access from both sides of a sliding unit.
- Fasteners included.
- High service life 50,000 cycles.

Use all mounting positions to achieve the max. load rating.

Slides DS 2028, Width 9.5 mm, to 65 kg, Stainless Steel, 3/4 Extension

Material: Stainless steel 1.4301.

Telescopic ball bearing slides for applications in the industrial and electronics sector.

- Hold-in in closed position.
- Ideal for environments where mild steel might corrode.
- Service life 10,000 / 80,000 cycles.

Accuride

Note

Recommended mounts: M4 screw.
Use all mounting positions to achieve the max. load rating.

Slides DA 4120, width 36 mm, up to 555 kg, partial extension

Material:

Slide elements: Aluminium, corrosion resistant.
Ball retainers and Balls: Stainless Steel.

Heavy Duty Telescopic ball bearing slides for applications in the industrial and electronics sector.

- Single slides available (universal).
- Very high load capacity up to 438 kg.
- Good corrosion resistance.
- Service life 5,000 / 10,000 cycles.

Note: Sold singly.

Accuride

¹⁾ At 5,000 cycles.

²⁾ At 10,000 cycles.

³⁾ At 10,000 cycles, horizontal mount.

Note

Recommended fastening: M8 screw.

Use all mounting positions to achieve the max. load rating.

End stops are tested for 10 cycles with 400 kg at 0.8 m/s.

Additional external end stops are recommended.

The load capacity was tested with 10,000 cycles at a slide spacing of 600mm. Larger spacings require more stiffness of the sliding part and adequate parallelism.

Slides DZ 2642, Width 12.7 mm, to 45 kg, Compact Profile, Full Extension

Material:

Slide elements: Cold-rolled steel, bright zinc plated.
Ball retainers: Cold-rolled steel, zinc-plated.
Balls: Hardened steel.

Telescopic ball bearing slides for applications in the industrial and electronics sector.

- Low slide profile.
- Groove or side mounting option.
- Hold-in in closed position.
- Very high service life 80,000 cycles.

Accuride

Note

Side-specific slide assembly: Levers move in same direction when pair of slides is installed.

Recommended mounts: M4 screw.

Use all mounting positions to achieve the max. load rating.

Attention: Vertical mounting only.

Slides DZ 7957, Width 19.1 mm, to 160 kg, Full Extension

Material:

Slide elements: Cold rolled steel, bright zinc-plated.
Ball retainers: Cold rolled steel, zinc-plated.
Balls: Hardened steel.

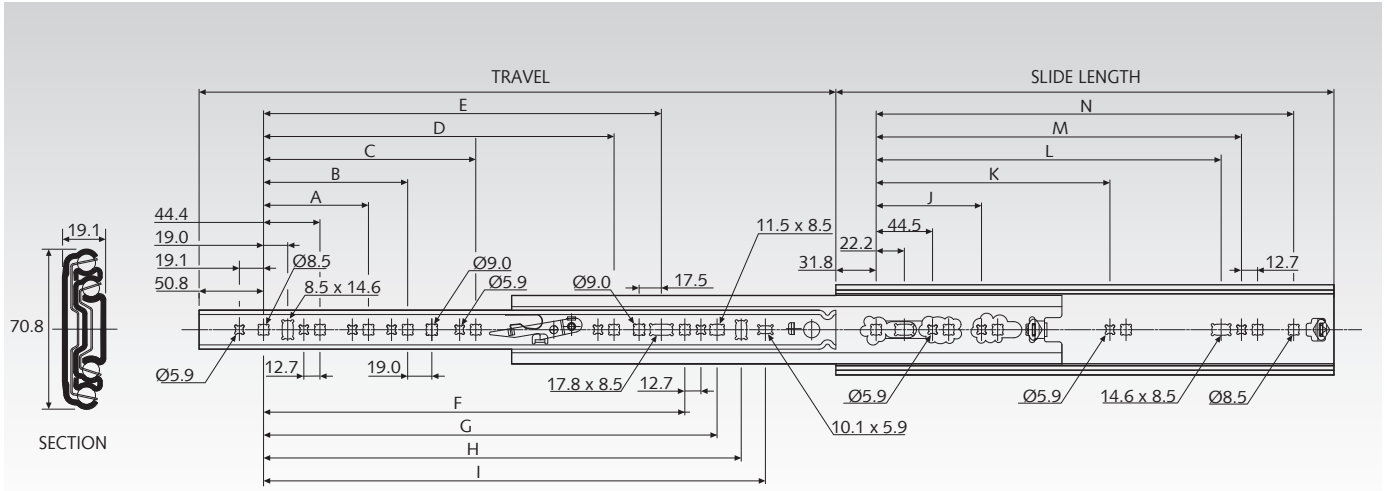

Telescopic precision ball bearing slides for applications in the industrial and electronics sector.

- Suitable for drawers up to 1000mm wide at high load.
- Fast Disconnect.
- Optional Clip-On Brackets (page 808).
- Very high service life up to 80,000 cycles.

Note

These slides are sold separately. To lock both sides a left-hand and a right-hand slide are required. To lock one side a left or right-hand slide can be combined with slide DZ 9301 as non-locking companion slide, see page 804.

Attention: Vertical mounting only.

Recommended mount: M5/M6 screw.

Max. screw head of 4.8 mm height and 12.7 mm Ø.

Use all mounting positions to achieve the max. load rating.

Bracket accessory kits DZ 634 for side and bottom mounting see page 808.

Slides DA 4160, Width 26.5 mm, to 300 kg, Full Extension

Material:

Slide elements: Aluminium, corrosion resistant.
Ball retainers and Balls: Stainless Steel.

Heavy Duty Telescopic ball bearing slides for applications in the industrial and electronics sector.

- Very high load capacity up to 300 kg.
- Good corrosion resistance.
- Only for vertical mounting.
- Service life 10,000 cycles.

Accuride

Ordering details: e.g.: Prod. No. 649 055 30, Slides DA 4160

Produ per Pair	Slide Length mm	Travel +/-3,2 mm	A mm	B mm	C mm	D mm	Load Rating per Pair kg	Weight kg

649 055 90	900	900	-	442,5	-	325	250	7,75
649 056 00	1000	1000	-	492,5	-	375	230	8,62

Note

Recommended mounts: M6/M8 screw.
Use all mounting positions to achieve the max. load rating.

Attention: Vertical mounting only.

The load rating is based on slides mounted 600mm apart. These slides are also suitable for wider applications, if the drawer is stiff enough.

End stops have been tested to 10 cycles with the nominated loads at 0.8 m/s. We recommend that additional external stopping arrangements are used.

We recommend that quality grease, rated for extreme pressure, is re-applied at 2000 cycle intervals.

Slides DZ 0522, Width 26.5 mm, to 180 kg, Over Extension

Material:

Slide elements: Cold-rolled steel, bright zinc plated.
Ball retainers: Cold-rolled steel, zinc-plated.
Balls: Hardened steel.

Telescopic ball bearing slides for applications in the industrial and electronics sector.

- Heavy-duty construction.
- Shock blocks offering protection against shock and vibration.
- Protective shroud prevents excessive contamination of the ball tracks.
- Mounting plates on inner and outer members.
- Service life 10,000 cycles (to 140 kg up to 40,000 cycles).

Ordering details: e.g.: Prod. No. 649 058 59, Slides DZ 0522

Product No. per Pair	Slide Length mm	Travel +/-3.2 mm	A mm	Overall Length mm	Load Rating per Pair kg	Weight per Pair kg
649 058 59	457	534	194,0	481	180	9,74
649 058 61	600	625	265,0	624	180	12,68
649 058 62	900	907	276,5	924	150	19,24

Note

Recommended mount: M6 screws on the inner, extending member, M8 screws on the outer fixed member.
Use all mounting positions to achieve the max. load rating.
The cabinet and drawer must be designed to minimise any deflection and torsion of the slide.

Overall length = slide length + 24 mm.

Clip-On Brackets and Bracket Accessory Kits for Slides

Pairs of Clip-On Brackets DZ 633 for Slides 2109, 2132, 3732 and 3832

Material:

Steel, bright zinc plated.

Can be used for:

Type DZ 2109 (page 773).

Type DZ 2132 (page 777).

Type DZ 3732 (page 783).

Type DZ 3832 (page 784).

Type DZ 3832 DO (page 788).

Type DZ 3832 SC (page 787).

Per pair of slides, one pair of clip-on brackets is required.

Recommended mounts: M4 screw.

Ordering details: e.g.: Prod. No. 649 020 35, 1 Pair of Clip-On Brackets DZ 633, Zinc Plated, 346.7 mm long

Linear Motion Guide DA 0115 RC with Ball Carriage

Material: Track made from aluminium.
Carriage: Stainless steel housing with plastic sealings.
 On choice: With stainless steel balls (greased) or polymer balls (grease free).

Linear guide for universal use.

- Two track lengths on choice (for to cut by the customer).
- Without bore holes, or with mounting holes.
- Several carriages can be used on one track.
- Resistant against corrosion and dirt.
- All parts have to be ordered seperately.
- Long service life, tested to 80,000 meters of travel distance.

Ordering details: e.g.: 1x Prod. No. 649 705 01, Carriage,
 1x Prod. No. 649 705 12H, Track 1200mm with Mounting Holes,
 2x Prod. No. 649 705 03, End Stop

Accuride

Mounting holes only
 at Product No. 649 705 12H
 and Product No. 649 705 24H

Product No.	Product	Load ratings in kg depending on mounting position and number of carriages									Weight g
		vertically mounted			horizontally mounted, lying			horizontally mounted, hanging			
		1 Carriage	2 Carri.	3 Carri.	1 Carriage	2 Carri.	3 Carri.	1 Carriage	2 Carri.	3 Carri.	
649 705 01	Carriage with stainless steel balls	50	90	130	30	55	70	40	70	90	120
649 705 02	Carriage with polymer balls	30	54	75	18	32	42	24	42	54	85
649 705 12	Track, length 1200mm										635

649 705 24	Track, length 2400mm										1270
649 705 24H	Track, length 2400mm with holes										1270
649 705 03*	End Stop (1 piece)*										15

* Depending on the application, 2 pieces may be required. 2 screws included.

Carriage (with mounting aid) and End Stops have to be ordered seperately.

Track lengths 1.2 or 2.4m (to be cut by the customer).

The load ratings depend on the mounting position (see table).

Drilling jig: to drill pinholes for permanent pinned connection of tracks.

Note

Not recommended for high torque applicatins.
 Fix track on a rigid and levelm surface. Fixing recommendation:
 M4 countersunk screw or 4mm countersunk wood screw.
 Drill countersunk holes in the middle of track, hole distance from
 100mm up to 200mm, depending on mounting position and load.

Push the carriages with the mounting aid carefully onto the track.
 Distribute weight evenly across carriages. Infinte track lengths
 possible. Butt tracks end to end and align the centre lines. For
 permanent pinned connection, use drilling jig (on request) for
 3mm pins

LOCTITE® Thread Locking

LOCTITE® 222 - Low-Strength Thread Locking

Ordering details: e.g.: Product No. 140 731 01, Loctite 222, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 731 01	10	Bottle	20
140 731 02	50	Bottle	77

Specifications

- Thread size: to M36.
- Strength: Low.
- Functional strength (Typical value at +22°C): 6 hrs.
- Breakaway torque tested according to DIN 54454: 6 Nm.
- Long-term temperature resistance: +150°C.

Approvals

- P1 NSF Reg. No.: 123002.

Low-strength thread locking for all threaded connections made from metal to M36. The connections can be unfastened using normal tools.

Applications

Ideal for adjusting screws, screws at maintenance access, carburetor screws etc.. Also suitable for metals which might brake during disassembly.

LOCTITE® 243 - Medium Strength Thread Locking

Ordering details: e.g.: Product No. 140 731 07, Loctite 243, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 731 07	10	Bottle	20
140 731 08	50	Bottle	78

Specifications

- Thread size: to M36.
- Strength: Medium.
- Functional strength (Typical value at +22°C): 2 hrs.
- Breakaway torque tested according to DIN 54454: 20 Nm.
- Long-term temperature resistance: +150°C.

Approvals

- P1 NSF Reg. No.: 123000.
- Certified to ANSI/NSF.
- Standard 61.

Medium strength thread locking for all threaded connections made from metal to M36. Tolerates low oil-based contaminations. The connections can be unfastened using normal tools.

Applications

Locks and prevents loosening from vibration on parts such as screws, nuts and studs, e.g., on motors, gearboxes and housings.

LOCTITE® 290 - Post-Assembly Thread Locking, Medium Strength

Ordering details: e.g.: Product No. 140 731 12, Loctite 290, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 731 12	10	Bottle	20
140 731 13	50	Bottle	77

Specifications

- Thread size: to M12.
- Strength: Medium.
- Functional strength (Typical value at +22°C): 3 hrs.
- Breakaway torque tested according to DIN 54454: 10 Nm.
- Long-term temperature resistance: +150°C.

For post-assembly thread locking (medium strength). For metal threads. Because of its low viscosity, the product penetrates into the threads, to size M12. When disassembling the parts, the connection should be heated to +250°C.

Applications

Prefabricated connections, carburetor screws, adjusting screws, screws at maintenance access etc.

LOCTITE® 2701 - Maximum Strength Thread Locking

Ordering details: e.g.: Product No. 140 731 18, Loctite 2701, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight
140 731 18	10	Bottle	20
140 731 19	50	Bottle	78

Specifications

- Thread size: To M20.
- Strength: High.
- Functional strength (Typical value at 22°C): 6 hrs.
- Breakaway torque tested according to DIN 54454: 38 Nm.
- Long-term temperature resistance: +150°C.

Approvals

- P1 NSF Reg. No.: 123006.

Maximum strength thread locking for all threaded connections made from metal, including passive materials, such as high-alloyed steel. Ideal for threaded connections exposed to strong vibrations and shocks, e.g. studs on motors or pumps etc. When disassembling the parts, the connection should be heated to +250°C.

Applications

All threaded connections which require high durability against strong vibrations and shocks or extreme environmental or chemical influences.

Safety Data Sheets at www.maedler.de in the section Downloads

LOCTITE® Bonding Products

LOCTITE® 603 - Oil-Tolerant Bonding Product

Ordering details: e.g.: Product No. 140 732 02, Loctite 603, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 732 02	10	Bottle	20
140 732 03	50	Bottle	83

Specifications

- Strength: High.
- Handling strength (at room temperature on steel): after 10 min.
- Functional strength (Typical value at +22°C): min. 12 hrs.
- Bondline gap: to 0.1 mm.
- Temperature resistance: +150°C.

Approvals

- P1 NSF Reg. No.: 123003.
- Tested and recommended by leading roller bearing manufacturers.

Oil-tolerant, universal bonding product for metal. Tolerates oil-based contaminations. Especially suited for the mounting of bearings (bondline gap to 0.1 mm). Rapid setting with high strength. When disassembling the parts, the connection should be heated to +250°C.

Applications

Bonding of bushes, bearings etc. in housings and on shafts with small bondline gap (to 0.1 mm).

LOCTITE® 638 - Bonding Product for Large Gaps

Ordering details: e.g.: Product No. 140 732 07, Loctite 638, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 732 07	10	Bottle	20
140 732 08	50	Bottle	83

Specifications

- Strength: High.
- Handling strength (at room temperature on steel): after 5 min.
- Functional strength (Typical value at +22°C): min. 6 hrs.
- Bondline gap: To 0.25 mm.
- Temperature resistance: +150°C.

Approvals

- KTW recommendation.
- DVGW approval.
- P1 NSF Reg. No.: 123010.

Special bonding product for metal highly capable of filling gaps and fast reached handling strength. For gaps up to 0.25 mm. Temperature resistant to +150°C. Handling strength after only 5 minutes. When disassembling the parts, the connection should be heated to +250°C.

Applications

Bonding of bushes, bearings etc. in housings and on shafts with large bondline gap (to 0.25 mm).

LOCTITE® 648 - Bonding Product with High Temperature Resistance

Ordering details: e.g.: Product No. 140 732 13, Loctite 648, Cont. 10 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 732 13	10	Bottle	20
140 732 14	50	Bottle	83

Specifications

- Strength: High.
- Handling strength (at room temperature on steel): after 5 min.
- Functional strength (Typical value at 22°C): min. 6 hrs.
- Bondline gap: To 0.15 mm.
- Temperature resistance: +175°C.

Universal bonding product for metal, temperature resistant to +175°C. Capable of filling gaps up to 0.15 mm. Handling strength after only 5 minutes. When disassembling the parts, the connection should be heated to 250°C.

Applications

Bonding of bushes, bearings etc. in housings and on shafts, in applications where high operating temperatures prevail.

LOCTITE® Instant Adhesives

LOCTITE® 401 - Universal Instant Adhesive

Ordering details: e.g.: Product No. 140 733 04, Loctite 401, Contents 5 g

Product No.	Contents in g	Packaging Type	Weight in g
140 733 04	5	Bottle	14
140 733 05	20	Bottle	31

Specifications

- Temperature range: to +80°C.
- Handling strength (steel at +22°C and 50% air humidity): after 5-20 sec.
- Viscosity mPa.s: 110.
- Especially suited for: porous materials.

Approvals

- P1 NSF Reg. No.: 123011.

Universal instant adhesive. Bonds almost all materials as, e.g., plastics, elastomers, metals, paper, cardboard, wood.

Application examples

Bonding a PVC seal onto an ABS housing when manufacturing car mirrors. Bonding foam rubber onto a steel or plastic housing. Bonding PVC foils onto paper when producing packaging materials. Bonding small plastic parts onto wood, e.g., in the furniture industry.

LOCTITE® 406 - Instant Adhesive for Plastic and Rubber

Ordering details: e.g.: Product No. 140 733 09, Loctite 406, Cont. 20 g

Product No.	Contents in g	Packaging Type	Weight in g
140 733 09	20	Bottle	31

Specifications

- Temperature range: to +80°C.
- Handling strength (steel at +22°C and 50% air humidity): after 10-20 sec.
- Viscosity mPa.s: 20.
- Especially suited for: plastics.

Special instant adhesive for fast bonding of rubbers (incl. EPDM), plastics and elastomers. In combination with the primer Loctite 7239 even hard to bond plastics can be bonded.

Application examples

Bonding a silicon rubber piece onto a plastic housing in a car locking unit. Bonding a plastic part onto a fire extinguisher. Producing O-rings with the Loctite O-ring set.

LOCTITE® 454 - Universal Instant Adhesive, Non-Drip Gel

Ordering details: e.g.: Product No. 140 733 16, Loctite 454, Contents 3 g

Product No.	Contents in g	Packaging Type	Weight in g
140 733 16	3	Tube	5
140 733 17	10	Syringe	18
140 733 18	20	Tube	32

Specifications

- Temperature range: to +80°C.
- Handling strength (steel at +22°C and 50% air humidity): after 5-20 sec.
- Viscosity: gel.
- Especially suited for: porous materials.

Approvals

- P1 NSF Reg. No.: 123009.

Universal, instant adhesive gel can be used for bonding metals, composite materials, wood, cork, foam plastic, leather, cardboard, paper and ceramics. Good gap filling capability. Recommended for use on vertical surfaces or when working overhead. Can also be used with automated processing systems.

Application examples

Bonding rubber door stops onto walls. Bonding plastic signs onto wooden doors. Bonding rubber treads onto the steps of an aluminium ladder.

LOCTITE® 4850 - Flexible Instant Adhesive

Ordering details: e.g.: Product No. 140 733 24, Loctite 4850, Cont. 5 g

Product No.	Contents in g	Packaging Type	Weight in g
140 733 24	5	Bottle	18
140 733 26	20	Bottle	31

Specifications

- Temperature range: to 70°C.
- Handling strength (steel at +22°C and 50% air humidity): after 5-20 sec.
- Viscosity mPa.s: 400.
- Especially suited for: flexible materials.

Approvals

- P1 NSF Reg. No.: 123011.

Flexible instant adhesive with medium viscosity. Rapid setting, transparent. Especially suited for the assembly and repair of flexible materials and components.

Application examples

Bonding of materials for the production and repair of flexible seals and sleeves or the mounting of elastic components.

LOCTITE® Sealants and Sealant Removers

LOCTITE® 518 - Medium Strength Standard Flange Sealant

Ordering details: e.g.: Product No. 140 734 02, Loctite 518, Cont. 50 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 734 02	50	Cartridge	89

Specifications

- Sealing type: Liquid (acrylic, red).
- Flange type: torsionally rigid.
- Curing type: anaerobic.
- Temperature resistance: -55 to +150°C.
- Instant sealing effect: excellent.
- Oil resistance: excellent.
- Water/glycol resistance: excellent.

One-component, medium strength flange sealant. The curing takes place on metal contact as anaerobic process. Fast curing at room temperature. Not recommended for plastic parts. Seals instantly at low pressure. Bondline gap to 0.5 mm.

Applications

Sealing of dimensionally stable flange connections as, e.g., engine and gearbox cover, water-pump flanges and controller housing covers.

LOCTITE® 5910 - Permanently Elastic Adhesive/Sealant

Ordering details: e.g.: Product No. 140 734 07, Loctite 5910, Cont. 50 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 734 07	50	Cartridge	104
140 734 08	300	Cartridge	453

Specifications

- Sealing type: liquid (silicon, black).
- Flange type: flexible.
- Curing process: air humidity.
- Non sticky: 20 min
- Temperature resistance: + 200°C.
- Instant sealing effect: excellent.
- Oil resistance: excellent.
- Water/glycol resistance: medium.

Permanently elastic flange sealant for non torsionally rigid flange seals. Low odour, little gas emission. Curing at room temperature. High resistance to vibration. Can also be used on plastic parts. Bondline gap to 6 mm.

Applications

Sealing of non torsionally rigid flanges which require high oil and vibration resistance, e.g. aluminium oil baths and controller housing covers.

LOCTITE® 5920 - Permanently Elastic Flange Seal Ultra Copper

Ordering details: e.g.: Product No. 140 734 12, Loctite 5920, Cont. 40 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 734 12	40	Tube	80
140 734 15	300	Cartridge	368

Specifications

- Sealing type: liquid (silicon, cupreous).
- Flange type: flexible.
- Curing process: air humidity.
- Temperature resistance: -60 to +315°C.
- Instant sealing effect: excellent.
- Oil resistance: excellent.
- Water/glycol resistance: excellent.

One-component flange seal that cures at room temperature with excellent temperature resistance. Excellent resistance against motor and gearbox oil. Meets and exceeds manufacturer's specifications of GM and Ford. Short term temperature resistance to +350°C. Sealing gaps to 6 mm.

Applications

Sealing of oil pumps, thermostat housings, water pumps, oil baths, gearbox covers etc.

LOCTITE® 7200 - Adhesive- and Sealant-Remover

Ordering details: e.g.: Product No. 140 734 20, Loctite 7200, Cont. 400 ml

Product No.	Contents in ml	Packaging Type	Weight in g
140 734 20	400	Spray Can	423

Specifications

- Aerosol, amber.
- Active agent: mixture of aliphatic glycol esters etc.
- Expanding agent: propane gas.
- Exposure time 10 to 15 min (with silicon 30 Min.).
- Foam forming, sticks well to vertical surfaces.

Removes hardened seals and adhesives from most metal surfaces within 10 to 15 minutes. Resolves and removes mould, lubricants, soot, caked on oil, fat and paint. Can also be applied on wood.

Application examples

Preparation of metal parts prior to the application of seals sealants. No need to grind away or scrape off old sealings, i.e. no unnecessary damage to the surface finish.

Maintenance and Repair Sprays

Chain Spray

Ordering Details:
Product No 140 701 00, Chain Spray

Product No.	Contents in ml	Weight in g
140 701 00	400	465

- Special adhesive lubricant for the maintenance of heavy-duty, fast-running drive and timing chains, plain bearings, open gear boxes etc.
- temperature resistant from -10°C to +140°C.
- strong bonding power.
- highly capable of creep.
- displaces moisture.
- reducing noise.
- protection against wear.
- corrosion protection.
- silicone-free.

Spray Cleaner

Ordering Details:
Product No. 140 701 01, Spray Cleaner

Product No.	Contents in ml	Weight in g
140 701 01	500	471

- Application: Test compatibility of material. Spray on dirty parts and let active substance drain off. Air-dry parts or wipe them with a dry cloth. In case of heavy soiling repeat the process.
- degreases and cleans metal, glass, etc.
 - resolves resinified residues.
 - removes adhesive residues.
 - cleans brake and clutch parts.
 - silicone-free.

PTFE Spray

Ordering Details: Product No. 140 701 02, PTFE-Spray

Product No.	Contents in ml	Weight in g
140 701 02	400	368

- Application: Shake can well before use until the mixing ball moves freely. Apply from a distance of approx. 20 cm creating a thin, even coat. The substance can be removed using a suitable solvent.
- free of grease, dry and clean.
 - water, dust and dirt repellent.
 - temperature resistant from -180°C to +240°C.
 - resistant against many chemicals, water, oils etc.
 - silicone-free.

Zinc Repair Spray

Ordering Details: Product No. 140 701 03, Zinc Repair Spray

Product No.	Contents in ml	Weight in g
140 701 03	400	389

- Application: Thoroughly remove rust and grease from surfaces to be sprayed. Shake can well before use. Apply from a distance of 25-30 cm.
- colour: light silver, glossy finish similar to zinc.
 - optically almost indistinguishable from hot-dip zinc coating.
 - heat resistant to +300°C (short term to +800°C).
 - triple corrosion resistance, zinc-aluminium pigments and resins protect the coated steel.
 - electrically conducting, can be used in spot welding.
 - silicone-free.

Long-Term Corrosion Protection Spray

Ordering Details.: Product No. 140 701 04, Long-Term Corrosion Protection Spray

Product No.	Contents in ml	Weight in g
140 701 04	400	378

- Application: Apply evenly, covering the surface completely from a distance of 20-30 cm. Further coats can be applied after drying.
- reliable long term protection against corrosion and oxidation for all steel and metal parts.
 - The strong-bonding, ceraceous protective film is resistant against water and salt water.
 - long-term conservation even in a chemically aggressive environment.
 - highly capable of creep, displaces moisture, bonds even to vertical surfaces.
 - silicone-free

Aluminium Spray

Ordering Details:
Product No. 140 701 06, Aluminium Spray

Product No.	Contents in ml	Weight in g
140 701 06	400	465

- Application: Thoroughly remove rust and grease from surfaces to be sprayed. Shake can well before use. Apply crosswise at a distance of 25-30 cm.
- highly abrasion resistant.
 - 99.5% pure aluminium.
 - heat resistant up to +600°C.
 - fast drying.
 - silicone-free.

Multi-Function Spray WD-40® Smart Straw™

Ordering Details: e.g.: Product No. 140 701 05, Multi-Function Spray WD-40

Product No.	Contents in ml	Weight in g
140 701 05	500	537

- Multiple use spray.
- displacement of moisture.
 - penetrating oil.
 - corrosion protection.
 - cleaner.
 - lubricant.
 - silicone-free.

Stainless-Steel Spray

Ordering Details
Product No. 140 701 07, Stainless-Steel Spray

Product No.	Contents in ml	Weight in g
140 701 07	400	465

- Application: Thoroughly remove rust and grease from surfaces to be sprayed. Shake can well before use. Apply crosswise at a distance of 25-30 cm.
- to touch up damaged stainless steel surfaces.
 - reliable protection against corrosion even in extreme weather conditions.
 - short-term heat resistant up to +300°C.
 - effective surface coating for all metal parts, most plastics, wood, stone, cardboard, glass, etc.
 - abrasion resistant.
 - silicone-free.

Safety Data Sheets at www.maedler.de in the section Downloads

The top portion of the page features a yellow background with a pattern of overlapping gear teeth and mechanical components, rendered in a lighter yellow or white color. The gears are of various sizes and orientations, creating a complex, industrial aesthetic.

GENERAL

TECHNICAL

INFORMATION

Mounting Options for Drive Wheels

There are several possibilities for mounting driving wheels (sprockets, V-Belt Pulleys, pulleys, spur gears etc.) or hubs on shafts. Most wheels are stocked with a rather small bore to allow for further machining. Machining works as drilling out, keywaying a.s.o. can be done at extra charge.

Please note: for several shaft diameters a number of sprockets, V-belt pulleys, spur gears and worm-gear sets are in stock "ready-to-install", i.e. with custom bore and keyway or prepared for Taper clamping bushes.

Fixing Pins

A hole is drilled through hub and shaft and both parts are then connected with a fixing pin. Usually only one side of the hub is pre-drilled, then the wheel is pushed onto the shaft and the hole is drilled through both shaft and the other side of the hub. Then the pin is driven in. This mounting method is suitable for low torques.

Feather Key Connection

Shaft and hub both receive a keyway, a key is pushed into the keyway of the hub. The wheel is pushed onto the shaft and secured against axial movement (with a set screw or with a stepped shaft and axial screw and washer at the end of the shaft). The most common kind of keyway is DIN 6885/1. Key connections are suitable for medium torques. Keys DIN 6885 see page 578. Boxes with an assortment of keys DIN 6885 see page 577.

Clamping Sets, Clamping Bushes and Shrink Disks

Clamping sets and thin-walled clamping bushes are available for various diameters. They allow fast and easy mounting on round shafts. A keyway is not required. Shrink disks are special clamping sets which press a thin-walled hub onto a shaft. Clamping connections are suitable for rather high torques.

Clamping sets and bushes, and shrink disks see page 330.

Taper Clamping Bushes

These customary conical bushes are used for easy and fast mounting of driving elements in Taper version. They can be used with and without key.

The bushes are available with various outer dimensions. For every outside measure there are bushes with many different bores available. This mounting method is cost-efficient and fast, and suitable for rather high torques. A large selection of cost-efficient driving elements in Taper version are available ex stock.

Taper clamping bushes see page 360.

Welding hubs for taper bushes see page 362.

Taper sprockets see page 74, 92, 101.

Taper V-belt pulleys see page 183.

Taper pulleys see page 154.

Taper couplings see page 388.

**Reworking within
24h-service possible.

*The tolerance fields stated for the keyway width usually refer to milled keyways.

For the width of reamed keyways ISO-quality IT8 (i.e. P8 instead of P9, N8 instead of N9 and JS8 instead of JS9) is recommended.

For sliding fit tolerance field H9 for for the shaft keyway and D10 for the hub keyway are recommended.

ISO - Tolerances for Shafts and Bores

Bore Tolerances:

Marked by capital letter and number. The capital letter signifies the position of the tolerance field in relation to the nominal dimension. The number is a reference number signifying the tolerance grade. The bigger this reference number, the bigger is the tolerance field, see table.

Shaft Tolerances:

Marked by small letter and number. The small letter signifies the position of the tolerance field in relation to the nominal dimension. The number is a reference number signifying the tolerance grade. The bigger this reference number, the bigger is the tolerance field, see table.

Fits: Application of Common Shaft Tolerances and Bore Tolerances

Hole basis fit:

The fits stated below are for the common, standard bores with the matching shaft.

Shaft basis fit:

Stated are the fits for the common, standard shafts with the matching bores.

Press and Transition Fits

Name of Fit	Basic Bore with Shaft	Bore with Basic Shaft
Press fit: parts can be fitted using strong pressure or through heating or cooling; bronze rims on gear bodies, bearing bushes in housings, wheel hubs, lever hubs etc., couplings on shaft ends. Needs no extra securing against turning.	H7 / s6 H7 / r6	S7 / h6 R7 / h6
Driving fit: parts can be fitted using pressure; wheel rims on wheel bodies, bearing bushes in housings and round hubs, pulleys on axes, rotors on motor shafts, couplings on shaft ends, drill bushings. Has to be secured against turning.	H7 / n6	N7 / h6
Force fit: parts can be fitted using a wooden hammer; gearing, belt pulleys on shorter shafts, couplings on shaft ends, piston pin, tight cylinder bolts. Has to be secured against turning.	H7 / m6	M7 / h6
Tight fit: parts can be easily fitted using a hand-held hammer; gearing, belt pulleys, couplings, hand wheels, brake disks on longer shafts and shaft ends. Has to be secured against turning.	H7 / k6	K7 / h6
Sliding fit: parts can be fitted with a hammer or by hand; for easily assembled or disassembled gears, belt pulleys, hand wheels, bushes. Has to be secured against turning.	H7 / j6	J7 / h6

Clearance Fit

Name of Fit	Basic Bore with Shaft	Bore with Basic Shaft
Sliding fit: parts can just be moved by hand; for sliding parts and guides, centring flanges, change gears, tailstock sleeve, adjusting rings.	H7 / h6	H7 / h6
Tight running fit: parts that can be moved without noticeable play; change gears, moveable wheels, clutches.	H7 / g6	G7 / h6
Running fit: parts that can be moved with noticeable play; slide bearings in general, main bearings in machine tools, slide bushes on shafts.	H7 / f7	F7 / h6
Loose running fit: parts with generous play; shafts with multiple bearings (slide bearings), slide bearings in general.	H7 / e8	E8 / h6
Sliding fit: parts can be easily moved; gears to be pushed on shafts, disks, slidable clutches, spacer sleeves.	H8 / h9	H8 / h9
Loose running fit: parts with generous play; main bearings of crankshafts, pistons in cylinders, pump bearings and lever bearings.	H8 / e8	E9 / h9

Material Standards Thermoplast, Non-Reinforced (at +23°C)

Acetal and POM are types of Polyoxymethylen-Copolymers (also called Polyacetal-Copolymers).
Chemically, both materials are nearly the same.

Acetal = moulded parts: Low cost, but not very precisely.

POM = turned / milled parts: More expensive, but higher precision.

		POM	Acetal (Resin)

Ketone, Ester		(+)	(+)
Chlorinated hydro carbon (trichloroethylene)	-	-	
Hot water, laundry lye	-	(+)	
+ = resistant (+) = limited resistance - = non-resistant			
The values were calculated from various spot checks taken as average values. If nothing else is stated, the test was carried out using plastic die casts. Standard tests are carried out in the standard climate 23/50 according to DIN 50 014			

Food compatibility

For external contact to food at short time, both kinds of plastic are physiological harmless. Please follow the federal law and regulations for your country. Also pay attention to your special operation conditions (for example temperature, ph-value of food).

Some plastics of different suppliers have a FDA-certificate (Food and Drugs Association of the USA). The plastics should not be in contact with food with more than 15% Alcohol or with a ph-value below 2.5.

Weather resistance

Acetal and POM are negatively affected by ultraviolet light, its good physical properties get worse if it is exposed to sunlight over a longer period. Remedy: use light-stabilized types.

Thread Dimensions and Fastening Torques

Thread designations: DIN/ISO Standard Threads with metrical sizes are designated without naming the pitch. The pitch is only named, if it is a special pitch (e.g. fine thread M14x1.5).

Validity: The sizes are like DIN 261 for metrical standard threads. The fastening torques are valid for common machine bolts with standard hexagon head or internal hexagon head.

Calculation basics:

Screw yield: 90% use.

Friction coefficient $\mu = 0.14$ (new bolt).

Note: These torques are common clues. The nut thread (thread bore in casing) has to be strong enough.

Special bolts may need diverse torques.

The instructions of the machine producer must be followed.

For screws with special coating or screws with very slidy grease (e.g. with MoS₂) the fastening torques must be reduced.

Thread Size	Dimensions		Strength / Fastening Torque							A2-70**

Taper Clamping Bushes – Description and Mounting Instructions

General Description

Customary, conical slotted clamping bush with feather keyway for an easy and fast mounting of driving elements on shafts.

Available Driving Elements

There are various sprockets, pulleys and couplings with Taper adapter available from stock.

Versions of Taper Bushes

The bushes are available with various outer dimensions. For every outer dimension, there are a large number of bore sizes matching several shaft diameters. The bushes are always supplied with a feather keyway DIN 6885.

Requirements Regarding the Shaft

Cylindrical shaft with a diameter tolerance of $+0.05\text{mm} / -0.125\text{mm}$. The best results are achieved with ISO-tolerance h6. Up to a shaft diameter of 100mm cost-effective drawn shafts with tolerance h9 may also be used.

Identification

4-digit number to identify the outer dimensions and 2 to 3-digit number (or inch identification) to state the bore size.

Application with and without Parallel Key

Due to the high clamping force a parallel key is not necessarily required for medium torques (e.g. with pulleys). If the shaft has a keyway, and no parallel key is used, the keyways of shaft and bush should be mounted with an offset of 180 degrees. For highest torques a shaft with keyway and parallel key DIN 6885/1 must be used (the following sizes require a flat parallel key DIN 6885/3: 1008-24, 1008-25, 1108-28, 1210-32, 1215-32, 1310-35, 1610-42, 1615-42, 2517-65).

Amount and Version of Screws

To size 3030 two stud screws with internal hexagon. From size 3525 three cylindrical screws with hexagon head.

Requirements Regarding the Driving Element

The component that is to be mounted must have the matching bush adapter (in Taper version). Using Taper versions makes sense in serial production. For one-off production the use of cylindrical clamping bushes is more economical. These are available in many different versions.

Mounting

- Clean and degrease all contact surfaces.
- Set the clamping bush into the hub making sure that all bores align. One threaded bore must always align with one of the smooth half-bores of the counterpart
- Lubricate the mounting screws and loosely screw in the threads of the component to be mounted.
- Put the parallel key into the shaft (if a parallel key is used).
- Push the component to be mounted onto the shaft, together with the entered bush **With feather key:** Align the keyway with the parallel key. **Without Feather key:** Make sure the keyway of the bush is offset by 180 degrees to the shaft keyway, if there is one.
- If necessary use light blows to drive the bush into position.
- Fasten the mounting screws evenly, until the max. torque is reached (see table).
- Improving the fit of the bush: drive the bush further into the component to be mounted with light blows (using a wooden block or a soft metal bush).
- Retighten the mounting screws with the maximum torque (see table). Alternatively the bush can also be retightened after an operating time of 30 to 60 minutes.
- Fill the empty holes (used for forcing off) with grease, to protect them against contamination (depending on the size there are one or two forcing threads).

Demounting

- Loosen screws and screw them out completely.
- Turn screws into the threaded bores of the bush (forcing thread). Depending on the size there are one or two forcing threads.
- Fasten the screws until the driving element disengages from the bush.
- Take driving element and bush off the shaft.
If necessary, the bush can be forced apart using a screwdriver. (drive screwdriver carefully into the slot provided).

Bush Nr.	Spanner Size	Screws Amount	Thread Size	Fastening Torque
	mm		Inch	Nm

The original language is German. Print mistakes, errors and translation mistakes might occur.

The reprint of our catalogs or use of our texts, photos or drawings requires the explicit written approval of MÄDLER GmbH in Stuttgart.

MÄDLER® and **MÄDLER**® are registered and protected trademarks in many countries.

§ 1 General information – Area of application

Our conditions of sale shall apply exclusively; conflicting or deviating terms and conditions of the buyer are not binding for us unless expressly agreed to their validity in writing. Our conditions of sale shall also apply where we perform delivery to the buyer without reservation in spite of knowledge of conditions of the supplier which conflict with or differ from our conditions of sale. Any agreements made between us and the buyer for the purpose of execution of this contract are contained in writing in this contract. Our sales conditions apply only to entrepreneurs as defined by § 310 paragraph 1 German Civil Code (BGB).

§ 2 Quotation – Quotation documents

If the order is to qualify as an offer in accordance with § 145 BGB, we shall have 2 weeks in which to accept it. We reserve ownership and copyright on illustrations, drawings, calculations and other documents. This applies equally to documents defined as "confidential". Passing them on to third parties shall be subject to our explicit written consent. All information provided in catalogues, drawings and models regarding performance, load capacity, dimensions and weights are approximate values. As part of ongoing technical development, we reserve the right to make dimensional and constructional alterations. Upon request and at the buyer's cost we provide a technical test certificate. Reproduction of our catalogues and drawings as well as copies of our models, even in part, requires our explicit approval in writing. Our offers are non-binding. Orders are only binding if confirmed by us or if fulfilled by sending of the goods.

§ 3 Pricing – Terms of payment

Retail customers and customers outside Germany will only be supplied on a cash before delivery basis. In the absence of any written agreements to the contrary, our prices for deliveries within Germany include free carriage and packaging; excluded are special freight and deliveries to foreign countries. Statutory VAT is not included in our prices; the applicable legal rate is stated in a separate invoice at the date of the invoice. Unless firm pricing has been explicitly agreed for a certain delivery, prices will be calculated according to our price lists valid at the time of the purchase, which also provide terms and conditions for small orders, call orders, price surcharges and return deliveries. These price lists in their currently valid form are the subject matter of conditions of sale, delivery and payment. Dispatch is carried out cash on delivery unless explicitly agreed otherwise. If delivery is not made cash on delivery, our invoices are to be settled within 30 days without any deduction. If the invoiced amount is paid within 14 days from date of invoice, the buyer is entitled to deduct a 2% discount. Discount deductions, however, shall only be permitted on condition that the buyer has settled all outstanding invoices with us or is settling them at the same time. Payment conditions for deliveries starting from EUR 1.500,00 for goods made up to specifications or samples are 50% upon receipt of confirmation of order and 50%, without deduction, within 30 days of invoice date. Partial deliveries are invoiced immediately. We shall be entitled to demand default interest amounting to 8 percentage points above the base rate, if periods of payment are exceeded. The seller reserves the right to claim damages for the enforcement of a further delay. Payment terms shall only be deemed met, if the amount payable is available to us within the delays. Bills of exchange are accepted only upon special previous agreement. Bills of exchange and cheques are accepted only on account of performance. Where there is major deterioration in the financial circumstances of the ordering party, we are entitled to refuse to carry out further deliveries until all receivables, due or not due, are settled or a warranty is provided. Only undisputed claims or those determined with legal validity shall entitle the buyer to offset claims or retain payments. Retentions of payments must be based on the same contractual relationship as the respective accounts receivables.

§ 4 Delivery times

Deadlines and dates for deliveries are only approximate. In case of a culpable failure to keep the delivery date, there will only be a default in delivery after an extended period has been set provided the underlying purchasing contract has not been expressly agreed on as a fixed date transaction, as defined in § 286 paragraph 2 No. 4 BGB or § 376 German Commercial Code (HGB). The commencement of the delivery period specified by us depends on prior clarification of all technical questions. Fulfillment of our delivery conditions is subject to prompt and proper fulfillment of the buyer's obligations. We reserve the defense of non-performance of the contract.

If the purchaser delays acceptance or if it culpably infringes other duties of cooperation, we shall be entitled to ask for compensation, including any additional expenditure. Any further legal claims shall remain unaffected. If the conditions of paragraph (3) are met, the risk of accidental loss or of accidental degradation of the item purchased shall transfer to the ordering party when the same party defaults on debts or in acceptance. We are liable within the legal provisions to the extent that the underlying purchasing contract is a fixed date transaction as defined in § 286 paragraph 2 No. 4 BGB or § 376 German Commercial Code (HGB). We are also liable pursuant to the statutory provisions to the extent that, as a consequence of a delay in delivery that is our responsibility, the customer has the right to claim cessation of his interest in continuing the performance of the contract. Moreover, we shall be liable in accordance with statutory provisions in so far as the delay in delivery is based upon an intentional or grossly negligent contract violation for which we are responsible; we shall also be responsible for a fault caused by our representatives or vicarious agents. Insofar as the delay in delivery is not the result of an intentional breach of contract for which we are responsible, our liability for compensation is limited to the foreseeable damage that may typically occur.

We shall bear legal liability under statutory regulations if the delay in delivery for which we are responsible has been caused by the culpable violation of an essential contractual obligation; in such case, however, our liability for damages shall be limited to the foreseeable typically occurring damage. The buyer shall reserve the right to additional statutory claims and rights.

§ 5 Transport Insurance, Packaging and Costs

Provided that nothing else is stated in the order confirmation, delivery shall be considered as agreed. Deliveries within the Federal Republic of Germany are free kerbstone edge and covered by our transport insurance. Everything else requires a special agreement. If the place of delivery is within the German Federal Republic, we shall bear the cost of loading and dispatch; otherwise, the ordering party is liable for the costs. Generally, shipments outside the German Federal Republic shall be transported at the expense and risk of the purchaser and we shall select a suitable carrier or transport company. Transport packaging and all other packaging in accordance with the German Packaging Ordinance is non-returnable and becomes the Customer's property, except for pallets. The customer is obliged to dispose of the packaging material at his own expense.

§ 6 Liability for defects

All information about suitability, workmanship and application of our products, technical advice and other details are given to the best of our knowledge but do not release the customer from the obligation to perform his own examinations and tests. Claims for defects by the customer require proper fulfillment of his obligations to inspect and complain in accordance with § 377 HGB. In the case of custom-built products we are allowed to make overdeliveries or underdeliveries of up to 10% of the ordered quantity.

Provided there is a defect on the merchandise, the customer is entitled to choose between rectification of the defect or having the merchandise delivered free of defects. In case of remedying a defect we are to bear all costs which are necessary for remedying the defect, especially transport, travel, work, and material costs insofar as these costs are not increased by moving the delivery to a place other than the place of performance. If subsequent performance fails, the buyer will be entitled to choose to demand cancellation or reduction. We are liable within the legal provisions, as far as the customer asserts a claim on compensation which is based on intention or gross negligence of us,

including intent or gross negligence on the part of representatives or vicarious agents.

As far as we are not accused of willful breach of contract, our liability for claims for damages is limited to the foreseeable, typically occurring damage. We shall be liable pursuant to the statutory provisions, insofar as we culpably violate an essential contractual obligation; however, in this case liability is restricted to foreseeable, typically occurring damage. Liability on account of culpable injury to life, limb or health shall not be affected; this shall also apply to mandatory liability as provided for in the product liability law. Liability shall be excluded in instances not covered in the above provisions. The statutory limit for claims in respect of a defect is 12 months, beginning with the transfer of risk. The statute of limitations in the event of a delivery recourse according to §§ 478, 479 BGB remain unaffected; it is five years, beginning from delivery of the faulty object.

§ 7 Total liability

We specifically exclude any additional form of liability, beyond that specified in § 6, independent of the legal nature of the issue. This applies in particular to claims for damages resulting from fault in conclusion of contract, from other breaches of duty or from tortious claims for compensation for property damage according to § 823 BGB. As far as the liability for compensation against us is excluded or restricted, this shall be valid as well with respect to the personal liability for compensations of our employees, staff members, representatives and vicarious agents.

§ 8 Security of reservation of title

We retain the title of ordered goods until all due payments have been provided as stated in the contract (including the settlement of all outstanding current account balances). If the customer acts in a way contrary to the contractual obligations, in particular in the event of a default in payment, we shall be entitled to retrieve the goods. Our taking back of the delivery item in no way constitutes withdrawal from the contract, unless this was previously explicitly agreed in writing.

A seizure of the delivered goods shall always constitute a withdrawal from the contract. After recovery of the purchased object we are entitled to sell the latter, the amount thus realized is to be deducted from the obligations of the ordering party - less reasonable exploitation costs. The customer is obliged to handle the purchased goods with care and, in particular, the customer shall, at its own expense, sufficiently insure such goods, at their original price, against fire, water and theft damage. If maintenance and inspection work is necessary, the contracting party must conduct such work in due time at its own cost. In the event of seizures or other action by third parties, the customer must notify us immediately in writing so that we can lodge a lawsuit in accordance with § 771 German Code of Civil Procedure (ZPO).

Unless third parties are incapable of reimbursing us judicial and extrajudicial costs for an action as per § 771 ZPO, the customer shall be liable for any expenses defrayed by our company. The buyer is entitled to resell the purchased item in the ordinary course of business; however, he herewith already assigns to us all claims to the amount of the invoice sum total (including value-added tax) arising from the further assignment to its clients or to a third party, and this independently of whether or not the purchase object has been sold on without or after further processing.

The buyer remains entitled to collect this receivable even after the assignment. Our right to collect such claims remains unaffected.

However, we undertake not to collect the claim as long as the client fulfills his payment obligations arising from the collected profits, is not in default of payment and particularly if no application for the institution of bankruptcy or composition or insolvency proceedings is filed and no insolvency has occurred.

However, if this is the case we can request that the buyer informs us of the assigned claims and their debtors, provides all pertaining information and relevant documents which are necessary for us to assert our rights, and that he informs the debtors (third parties) about the assignment. The processing or modification of the purchased item by the customer will always be carried out on our behalf.

If the ordered item is processed with other objects not belonging to us, we acquire the joint ownership of the new resulting item in the ratio of the value of the object bought (final invoiced amount including value-added tax) to the other processed objects at the time of processing. Apart from this the same shall apply for the item resulting through processing as for the item delivered under reserve. If the object of sale is indivisibly mixed with other objects not belonging to us, we shall acquire co-ownership of the new object created in the ratio of the value of the delivered item (final invoice value including value-added tax) to the other mixed objects at the time of mixing.

If mixing occurs in such a way that the contractor's item is to be regarded as the principal item, it is deemed to have been agreed that the contractor transfers proportionate co-ownership to us. The purchaser keeps the herewith generated sole ownership or co-ownership for us.

As a security for our own claim, the customer also assigns to us the claims arising against a third party by integration of the ordered goods into real property. At the request of the customer, we undertake to release the securities to which we are entitled insofar as the realisable value of our securities exceeds the claims to be secured by more than 10%, the choice of the securities to be released is within our scope of responsibility.

§ 9 Provision of Materials and Samples

If the tool breaks as a result of bad prior work or defective material on the parts to be processed, relevant cost shall be borne by the customer. If work pieces provided by the customer become unusable as a result of mistakes in workmanship, with the exception of intent and gross negligence, we shall assume responsibility only for work carried out by our company. A guarantee is granted by way of subsequent improvement in such way that we carry out the same processing again, at no charge, when new work pieces are delivered to us. Our liability - with the exception of intent and gross negligence - is limited to the invoiced wage costs.

Prior to leaving our premises, the processed parts are subjected to a random inspection. Additional examination takes place only upon special agreement or against calculation of extra costs. This output check does not release the customer (recipient of goods) from his own duty to carry out an incoming goods check. We do not accept responsibility for any samples sent to us.

§ 10 Jurisdiction – Place of fulfillment

Provided the buyer is a merchant, jurisdiction shall be our place of business; we are, however, entitled to sue the buyer at the court of his residence.

The law of the Federal Republic of Germany shall apply with the exception of UN international trade law.

Unless otherwise provided in the confirmation of order, place of fulfillment is the place of our business.

Status October 2012, MÄDLER GmbH

Custom-made Products

The modern production machinery and our team of specialised; skilled workers serve as a basis for another main part of our production: Custom-made products according to drawings or your specifications, from one-off production up to large series, at a good price and with short delivery times- with perfect quality control, and flexible as today's market demands.

Gears from module 0.3 to module 8, Gear racks from module 0.3 to module 16, bevel gears from module 0.5 to module 8, worm gears and worms from module 0.3 to module 6, trapezoidal thread from 10 x 3 mm to 70 x 10 mm single and double thread, including all matching trapezoidal thread nuts. Splined hubs and clamp collars for splined hub profiles 11 x 14 to 46 x 54.

In-house Production

The **MÄDLER**® group produces its parts in Germany at two manufacturing sites: Stuttgart and Hamburg. There specialised workers produce our own **MÄDLER**®-product range on the most modern CNC machinery.

One-off production according to drawings or samples up to larger series, with a perfect quality control, flexible as today's market demands.

The most important prerequisite is a highly qualified and cost-effective production and a guarantee for the shortest delivery times for all parts listed in the yellow **MÄDLER**® catalogues and the Internet.

Another manufacturing site is in China. This joint-venture enables simpliere mass parts due to German quality standards at low prices.

Ballscrew Spindle Drives

MÄDLER® can supply you with ballscrew spindle drives matching your special specifications.
